Contents

1. Structure, bonding, and reactivity of organoaluminum molecular species: a computational perspective
   Odile Eisenstein and Hélène Gérard 1

2. Aspects of the chemical energetics of carbon–aluminum bonded species
   Suzanne W. Slayden and Joel F. Liebman 33

3. Mass spectrometry of organoaluminum derivatives
   Rhonda L. Stoddard, Scott Collins, and J. Scott McIndoe 71

4. The use of $^{27}$Al NMR to study aluminum compounds: a survey of the last 25 years
   Charlotte Martineau, Francis Taulelle, and Mohamed Haouas 87

5. Electrochemistry of organoaluminum compounds
   Ivgeni Shterenberg, Michael Salama, Yosef Gofer, and Doron Aurbach 139

6. The chemistry of alkynylaluminum species
   Riccardo Piccardi, Laurent Micouin, and Olivier Jackowski 157

7. The chemistry of bis-aluminated compounds
   Seijiro Matsubara 205

8. The chemistry of low-valent organoaluminum species
   Rudolf J. Wehmschulte 223

9. Carboalumination reactions
   Shouquan Huo 253

10. Hydroalumination of alkenes and alkynes
    Adriano C. M. Baroni, Carla C. P. Arruda, and Diego B. Carvalho 317

11. The preparation and cross-coupling reactions of organoaluminum compounds
    Paul Knochel and Vladimir Malakhov 341

12. Organoaluminum compounds and Lewis pairs
    Marcus Layh, Werner Uhl, Ghenwa Bouhadir, and Didier Bourissou 379
xvi                                Contents

13. Organoaluminum compounds in catalytic enantioselective C–C bond forming reactions  425
    Kevin P. McGrath and Amir H. Hoveyda
