Index

Note: Numbers in italics indicate photo pages.

A
abbreviations
for measures of volume, 4
for measures of weight, 2
all-purpose flour, volume-to-weight equivalent, 22
answers to practice problems, 277–300
AP (as-purchased) cost per unit. See as-purchased (AP) cost per unit
AP (as-purchased) quantity. See as-purchased (AP) quantity appendices, 259–276
Appendix I: Additional Information on Units of Measure, 259–260
Appendix II: Volume Unit Equivalent Visual Memorization Aids, 261–262
Appendix III: Changing Between Fractions, Decimals, and Percents, 263–266
Appendix IV: The Butcher’s Yield, 267–268
Appendix V: Information from The Book of Yields, 269–276
as-purchased (AP) cost per unit
comparing, when waste is a factor, 201–202
comparing, when waste is not a factor, 200–201
definition of, 139
in recipe costing, 139
as-purchased (AP) quantity(ies)
calculating, 82–90
calculating for a recipe, 112–118
calculating by using portion size or recipe quantities, 104–111
calculating total cost of recipe, 143
definition of, 74
grocery list, role in creating, 119
in recipe costing, 139
recipe quantities that compensate for waste, 91–94
avoirdupois, definition of, 2

B
baker’s percent, 241, 248–257
Baking at Home with the CIA, 26, 64, 65, 66
balance scale, 3, 3
Book of Yields, The, 22, 24, 40, 47, 76, 82, 83, 96, 101, 107, 117, 196, 203, 204, 205, 206, 269, 276
information from, 269–276
bridge method, 9
bushel, 4
butcher’s yield, 204, 267–268
butter, volume-to-weight equivalent, 22
buying products, factors to consider, 201, 202

canned foods weight-to-volume, yield of, 273
cheddar, grated, volume-to-weight equivalent, 22
chili powder, volume-to-weight equivalent, 22
compaction’s effect on weight of substance when measured by volume, 24
comparative costing, 200–212
constraining ingredient, 39
scaling a recipe based on, 56
conversion, unit. See unit conversion
converting
between weight and volume, 21
units of measure within weight or within volume, 8–20
Cooking at Home with the CIA, 25, 34, 116
cooking and math, similarities between, viii
corn niblets, volume-to-weight equivalent, 22
cost of an ingredient
calculating, when waste is a factor, 140–142
calculating, when waste is not a factor, 139–140
comparing, 204
definition of, 139
factors causing fluctuation, 192
food cost percent and, 158
labor’s impact on, 206
cost per portion
definition of, 143–144
effect on food cost percent, 156–158
food cost percent and, 158
cost of sales percent, definition of, 156
count, definition of, 91, 92
Culinary Institute of America, The, 7, 17, 18, 19, 20, 21, 23, 25, 26, 34, 63, 64, 65, 66, 71, 72, 116, 118, 119, 123, 124, 125, 127, 128
cup, 4–5, 9
D
decimal, changing into a fraction or a percent, 264
density’s effect on weight, 22, 22
digital scale, 3, 3
dimensional analysis, definition of, 9
dry volume measures, 4

E
easily measurable quantities, definition of, 47, 56
edible portion (EP) cost per unit
  calculating, 202–204
  definition of, 202
  prefabricated versus fabricated products, 203, 206
edible portion (EP) quantity, 91, 92
  calculating 82–90
  calculating portion size, 96
  definition of, 74
  of ingredient, waste as factor, 91–92, 140
EP (edible portion) quantity. See edible portion (EP) quantity
equipment used, effect on yield percent, 76
equivalent(s)
  definition of, 2
  practice problems, 13–20
  volume, 5, 8–13
  weight, 2–3, 8–13
example(s)
  AP cost per unit, 132
  AP cost per unit, comparing, 200–201
  baker’s percent, 248–250
  converting to an easily measured unit, 10, 11
  converting to metric units, 12
  converting recipe quantities, 23
  cost of an ingredient when waste is a factor, 140–142
  cost of an ingredient when waste is not a factor, 139–140
  costs of ingredients, comparing, 205–206
  cost per portion, 144
  cost of recipe, determining, using recipe costing form, 167–169
  EP cost per unit, 203, 204
  EP quantity, 82–84
  estimated selling price, 158–159, 170
  food cost percent, 155, 170
  impact of labor on ingredient cost, 206
  portioning, 12, 13, 96–97
  ratio, using when one ingredient quantity is known, 222, 224
  ratio, using when total yield is known, 231–233
  scaling factor using constraining ingredient, 39
scaling factor using recipe yields, 36–38
scaling recipe based on a constraining ingredient, 56
standardizing a recipe, 63–69
total cost of recipe, 142–143
working with ratios using percents, 241, 242
Excel spreadsheet, 2-in-1 costing form, 192–199
practice problems, 196–199
practice problems, answers to, 293–296

F
fabrication/fabricate
definition of, 74
trim loss, 75
yield percent, 76, 83–84, 91
flour(s). See baker’s percent; all-purpose flour
fluid ounce, 4–5, 9
  versus ounce, 21
food cost. See cost per portion
food cost percent, 154–159
  adjusting, 156–158
  calculating, 154–155
  definition of, 154
fraction
  changing into a decimal, 263
  changing into a percent, 263
  reducing, 266

gallon, 4–5, 9
glossary of terms, 301–302
Gourmet Meals in Minutes, 119, 120, 121
gram, 2–3, 9
granulated sugar, volume-to-weight equivalent, 22
green peppers, diced, volume-to-weight equivalent, 22
grocery list
  for corporate event (in example), 122
  creating a, 119–130
gross profit
  calculating, 155–156
  definition of, 155
gross profit percent, 155

H
Herbfarm Cookbook, The, 33
home recipe, scaling for large-scale production, example for, 11

I
ingredient(s)
  constraining, scaling a recipe based on, 56
effect on weight of substance when measured by volume, 23
measuring by weight, 24
ingredient cost. See cost of an ingredient

K
Katzen, Mollie, 115
kilo gram, 2, 9
kitchen formula. See kitchen ratio
kitchen ratio
being measured by weight versus volume, 215
definition of, 214

L
labor’s impact on ingredient cost, 206
liquid volume measures, 4
liter, 4–5, 9
Lynch, Francis T., 22, 269, 276. See also Book of Yields, The

M
math and cooking, similarities between, viii
measures, units of, Web resources for, 260
measuring
by volume, 4–5
by weight, 2–3
metric system, 2
converting to, example, 12
metric gram, definition of, 2
milliliter, 4–5, 9
mirepoix
weight ratio, standard, for, 215
weight ratio for, as common kitchen ratio, 214, 216, 223
mixed measurement, definition of, 3

N
New Moosewood Cookbook, The, 115
nonstandard unit of measure, 63

O
ounce, 2, 9
versus fluid ounce, 21

P
par stock, 119
part size
about, 216
using a ratio when one ingredient quantity is known, 222, 224, 241
using a ratio when total yield is known, 231–233
peck, 4

 percent(s)
changing to a decimal, 264
changing to a fraction, 265
working with ratios using, 241
pint, 4–5, 9
portion (serving) size
calculating, 96–103
converting units of measure to adjust to, 8
definition of, 96
food cost percent and, 158
portioning, examples for, 12, 13
portioning and purchasing, 95–130
pound, 2, 9
practice problems
AP costs per unit, calculating, 133–138
AP quantity, calculating, 93–94
AP quantity or EP quantity, calculating, 84–90
baker’s percent, 251–257
comparative costing, 207–212
cost of ingredient amount, calculating, 145
equivalents, 13–17, 25–34
food cost percent, 159–165
cost of ingredient amount, calculating, 145
equivalents, 13–17, 25–34
food cost percent, 159–165
cost of ingredient amount, calculating, 145
kitchen ratios, 217–221
portioning and purchasing, 98–103, 108–111, 123–130
ratios, 225–230, 234–240
ratios using percents, 243–247
recipe costing, 145–153, 207–212
recipe costing form, using, 171–191
scaling factor/recipe, 40–45, 47–55, 57–62
standardizing recipes, 69–72
standard unit equivalents, 5–7
yield percent, calculating, 77–81
preparation method
effect on weight of substance when measured by volume, 24
effect on yield percent, 76
product (size, quality, and condition), effect on yield percent, 76
product yield, information that compensates for, 107
Professional Chef, The, 7, 17, 18, 19, 71, 72, 118, 123, 124, 125, 127, 128
professional kitchen, measurements used in the, 2–5
purchasing and portioning, 95–130

Q
quart, 4–5, 9

R
ratio(s)
adaptability of, 231
definition of, 214–216
using, when desired yield is known, 231–233
ratio(s) (continued)
  using, when one ingredient quantity is known, 222–224
  versus recipe, 216
  working with, using percents, 241–242

recipe(s)
  standardizing, 63–72
  standardizing, for control purposes, 21
  total cost, calculating, 142–143

recipe conversion factor. See scaling factor

recipe costing, 131–212
  calculating total cost, 142–143
  cost of an ingredient, 139–142
  forms, 192–199
  importance of, 143
  2-in-1 costing form, 192–199
  2-in-1 costing forms, the Excel Version, 192–195

recipe quantities, by weight, volume, or count, 91

recipe quantity’s unit, 92

recipe scaling, 35–72
  based on a constraining ingredient, 56
  based on desired yield, 46–47
  calculating a scaling factor, 36–39
  standardizing recipes, 63

recipe versus ratio, 216

recipe yield, 36, 144
  calculating scaling factor using, 36
  relationship between number of portions and cost
  per portion, 144

roux, ratio for, 215, 215

salt, table grind, volume-to-weight equivalent, 22

scales, types of, 3, 3

scaling factor
  calculating, 36–39
  calculating using recipe yields, 36
  definition of, 36
  using to calculate revised recipe yield, 47
  using ingredient quantities to calculate, 39

scaling home recipe for large-scale production, example
  for, 11

Schneller, Thomas, 267

selling price
  calculating, 158–159
  definition of, 154
  effect on food cost profit, 154–155, 156–158
  effect on gross profit, 155–156
  estimated, calculating, 158–159
  food cost percent and, 158

serving sizes, about, 92

skill level of person preparing product, effect on yield
  percent, 76

spring scale, 3, 3

standard cost, 132

standard/standardized recipe, 21, 63, 69
  testing a, 69
  for control purposes, 21

standard unit equivalents
  practice problems using, 5–7

subrecipe, 67

Système International d’Unités (SI), 2. See also metric system

systems of measurement. See Système International
d’Unités; U.S. customary system

T

tablespoon, 4–5, 9

tare, definition of, 21

teaspoon, 4–5, 9

Techniques of Healthy Cooking, 63

Traunfeld, Jerry, 33

trim loss, 75

2-in-1 recipe costing form, 166–167
  Excel version, 192–199

U

unit conversion, 1–34, 112
  definition of, 8
  for ease of measurement, 8
  within weight or within volume, 8–20

unit(s) of measure, 1–34
  nonstandard, 63

unity fraction method. See bridge method

U.S. customary system, 2, 4

V

Vegetables, 21, 23

visual memorization aids, for volume unit equivalent,
  261–262

volume
  definition of, 2
  dry volume measures, 4
  liquid volume measures, 4
  measuring by, 4–5
  and weight, converting between, 21

volume equivalents, commonly used, 9

volume measures, notes on, 259

volume ratio versus weight ratio, 215

volume unit equivalent visual memorization aids,
  261–262
W

waste
  and AP costs per unit, 200–202
  and cost of an ingredient, 139–142
  recipe quantities that compensate for, 91–92
water, volume-to-weight relationships for, 259
Web resources for units of measures, 260
weighing ingredients, 232
weight
  as accurate method to measure ingredients, 24
  definition of, 2
  density’s effect on, 22
  measuring by, 2–3
  recipe quantities that compensate for, 91–92
  of substance when measured by volume, factors affecting, 23–24
  and volume, converting between, 21
weight equivalents, commonly used, 9

weight measures, notes on, 259
weight ratio versus volume ratio, 215

Y

yield, butcher’s, 204, 267–268
yield, desired
  calculating based on scaling factor, 47
  scaling recipes based on, 46–47
yield percent, 73–94, 112, 119
  calculating, 73–81
  definition of, 74
  exceptions to the rule, 92
  fabrication and, 76, 83–84, 91
  in 2-in-1 recipe costing form (Excel version), 194
yield test
  definition of, 76
  factors affecting results of, 76

Z

zero. See tare
