List of Figures  xi
List of Tables  xxv
Preface  xxvii

Section 1  1

1  Brands of Airlines  3
  1.1  Schedule Availability  3
  1.1.1  Charter Airlines  3
  1.1.2  Scheduled Airlines  4
  1.2  Size and Domain of Service  4
  1.2.1  Major Airlines  4
  1.2.2  National Airlines  4
  1.2.3  Regional Airlines  5
  1.3  Business Model  5
  1.3.1  Legacy Airlines (or Mainline)  5
  1.3.2  Low-cost Airlines  6
  1.3.3  Ultralow-cost Airlines  6
  1.4  Ownership  7
  1.4.1  Public or State Ownership  7
  1.4.2  Private Ownership  7
  1.5  Network Structure  8
  1.5.1  Hub and Spoke  8
  1.5.2  Point-to-Point  8
  1.5.3  Hybrid  8
  1.6  Transport Service Type  8
  1.6.1  Cargo Airlines  8
  1.6.2  Passenger and Cargo Airlines  9
  1.7  Network Coverage  9
  1.7.1  Domestic  9
  1.7.2  International  9
Contents

2 Airline Network Structure 11
  2.1 Introduction 11
  2.2 Time Bank 14
  2.3 Advantages of the Hub-and-spoke Network 23
    2.3.1 Better Network Coverage 23
    2.3.2 Mixed Portfolio of Passenger Demand 24
    2.3.3 Dominance at the Hub 26
    2.3.4 Economy of Scale Operations at the Hub 27
  2.4 Limitations of the Hub-and-spoke Network 27
    2.4.1 Congestion at the Hub 27
    2.4.2 Schedule Vulnerability to Disruption at the Hub 28
    2.4.3 Extended Ground Time for Resources 28

3 Airline Schedule Planning Decisions 31
  3.1 Definitions 31
    3.1.1 Demand Forecasting and Competition Analysis 31
    3.1.2 Served Markets 32
    3.1.3 Flight Frequency 32
    3.1.4 Flight Departure/Arrival Time 32
    3.1.5 Fleet Assignment 33
    3.1.6 Aircraft Schedule 34
    3.1.7 Crew Schedule 35
    3.1.8 Gate Assignment 35
    3.1.9 Other Resources 36
  3.2 Relationships Among Scheduling Decisions 36
    3.2.1 Flight Frequency and Fleet Assignment 37
    3.2.2 Departure Time and City-pairs 38
    3.2.3 Departure Time and Demand 38
    3.2.4 Fleet Assignment and Flight Arrival Time 39
    3.2.5 Fleet Assignment and Flight Departure Time 40
    3.2.6 Flight Departure Time, Arrival Time, and Block Time 40
    3.2.7 Flight Departure Time and Aircraft Rotation 42
    3.2.8 Flight Schedule and Fleet Assignment Balance 42
    3.2.9 Maintenance Rotations and Fleet Assignment 42
    3.2.10 Seat Capacity/Frequency and Demand 44
    3.2.11 Feet Assignment and Flight Demand 46
    3.2.12 Frequency and Departure Time 46
    3.2.13 Departure/Arrival Time and Gate Availability 48
    3.2.14 Departure Time and Crew Schedule 49

4 Measures of Performance 51
  4.1 Operating Cost 51
  4.2 Revenue or Income 52
  4.3 Net Income (Net Profit) and Operating Profit 53
4.4 Flights 53
4.5 Available Seat Miles 55
4.6 Cost per Available Seat Miles (CASM) 56
4.7 CASM-EX or CASM-EX Fuel 57
4.8 Passengers 58
4.9 Revenue Passenger Miles (RPM) 60
4.10 Total Revenue per Available Seat Mile (TRASM or Simply RASM) 61
4.11 Passenger Revenue per Available Seat Mile (PRASM) 61
4.12 Passenger Yield 62
4.13 Average Load Factor (LF) 62
4.14 Block Hours 66
4.15 Aircraft Utilization 66
4.16 Stage Length 66
4.17 On-time Performance Measures 67
4.18 Aircraft Life Cycle 67
4.19 Aircraft Number and Diversification 68

5 Freedoms of Air Service 75

6 Slot Availability 81
6.1 Level 1 Airports 82
6.2 Level 2 Airports 82
6.3 Level 3 Airports 84

Section 2 91

7 Feasibility of a New Route 93
7.1 Business Plan 94
7.1.1 Proposed Property 94
7.1.2 Identifying Demand Feeders 94
7.1.3 Identifying the Size of the Demand Feeders 95
7.1.4 Analyzing Competition 96
7.1.5 Estimating Market Share 96
7.1.6 Estimating Total Demand and Unconstrained Market Share 101
7.2 Application of Feasibility Study on a New Airline Route 102
7.2.1 The Proposed Route 103
7.2.2 Identifying Demand Feeders 103
7.2.3 Identifying the Size of the Demand Feeding Markets 104
7.2.4 Analyzing Competition 105
7.2.5 Estimating Market Share 106
7.2.6 Estimating Total Flight Demand (Unconstrained Demand) 110
## Contents

8  Market Share Models  113  
8.1  What Is a Model?  113  
8.2  Model and Historical Data  114  
8.3  Model Development Example  115  
8.4  Categorical Dependent Variable  119  
8.5  Introduction to Discrete Choice Models  120  
8.6  Itinerary Choice Models  123  
8.7  Applying Itinerary Choice Models: An Example  131  

9  Profitability Forecasting Models  139  
9.1  Introduction  139  
9.2  Model Input  140  
9.3  Itinerary Builder Module  143  
9.4  How the Model Works?  143  
9.5  Load Factor, Market Share, and Market Concentration  144  

10  Partnership Agreements  149  
10.1  Introduction  149  
10.2  Regional Airlines  150  
10.3  Code-share Agreements  151  
10.4  Airline Alliances  154  
10.5  Distribution Channels and Point of Sale  154  
10.6  Loyalty Programs  156  
10.7  Corporate Travel  156  

Section 3  159  

11  Basic Fleet Assignment Model (FAM)  161  
11.1  Introduction  161  
11.2  Graphical Representation: Time-staggered Diagram  164  
11.3  Problem Input  167  
11.4  Problem Definition and Formulation  170  
11.5  The Constraints of the Basic Fleet Assignment Problem  172  
11.5.1  The Coverage Constraints  172  
11.5.2  Resources Constraints  173  
11.5.3  The Through-flights Constraints  173  
11.5.4  The Balance Constraints  174  

12  A Walk-through Example of the Basic Fleet Assignment Model  175  
12.1  Problem Definition  175  
12.2  The Objective Function  178
## Contents

12.3  The Constraints  178  
12.4  Interconnection Nodes  183  

13  Application of the Basic Fleet Assignment Model  193  
13.1  Introduction  193  
13.2  Problem Input  193  
13.3  Setting the Problem in Excel Solver  203  
13.4  Solution Interpretation  208  
13.5  Resources Constraints  210  
13.6  Additional Constraints  213  

Section 4  215  

14  The Schedule Adjustment Problem  217  
14.1  Introduction  217  
14.2  Schedule Adjustment Decisions  218  
14.3  Problem Formulation  219  

15  Examples on the Schedule Adjustment Problem  221  
15.1  Flight Deletion  221  
15.2  Flight Addition  228  
15.3  Flight Departure Time  235  

Section 5  243  

16  Itinerary-based Fleet Assignment Model (IFAM)  245  
16.1  Introduction  245  
16.2  Spill Cost Estimates and Network Effect  246  
16.3  Demand Recapture  248  
16.4  The Flight–Itinerary Interaction  251  
16.5  The Itinerary-based Fleet Assignment Problem  254  

17  Example on IFAM  255  
17.1  Problem Definition  255  
17.2  The Constraints of the IFAM Example  258  
17.3  The Objective Function  259  
17.4  Problem Solution  270  

18  Comparing FAM and IFAM  279  
18.1  Problem Definition  279  
18.2  Problem Solution  285
