extraversion, 142–143
neuroticism, 145–146
openness to experience, 140–141
changes, 138
conscientiousness, 138–139
dispositional/trait perspective, 257
extraversion, 138–139
financial behavior and, 138, 139
HEXACO Personality Inventory, 139
humanistic perspective, 256
neuroticism, 138–139
openness to experience, 138–139
practice and, 149–150
psychodynamic perspective, 256
research and, 149–150
social learning perspective, 257
PET (positron emission tomography), 227
PHQ-9 depression inventory, 198
portrayal of data, 126–127
positive psychology, 258
MI (motivational interviewing) and, 263–264
prescriptive interventions, decision-making, 25
priority planning, budgets, 74–75
probabilistic decisions
actuarial approach, 168–170
aging clients and, 235
clinical/holistic approach, 168–170
mechanical approach, 168–170
statistical approach, 168–170
probability
availability heurist and, 31
probability weighting, prospect theory, 46
similaritiy and, 28–29
processing speed, aging and, 230–231
procrastination, decision-making and, 23
proportions, decision-making, 38
prospect theory
diminishing sensitivity, 46
disposition effect, 53–54
endowment effect, 51–53
equations, 46
versus expected theory, 51
gains
mental accounting and, 72
utility and, 47
loss aversion, 46, 48
losses
mental accounting and, 72
utility, 47
mental accounting and,
70–71
gains and losses, 72
probability weighting, 46
certainty effect, 49
possibility effect, 49
reference dependence, 46, 47
research, 55
status quo bias, 53
value functions
asymmetric S-shape, 47, 48
concave (gains), 47
convex (losses), 47
deviation from reference point, 46–47
reference points, 47
reflection effect, 48
steepness, 47
