Boltzman–Maxwell distribution, 123
Bremsstrahlung magnetic, 425
Brillouin stream, 389–391
Brillouin rays, 500
de Broglie’s wave, 97
Bunching:
crossed fields, 365
current, 268
electron gap, 252
gyrokystron, 503
inertial and forced, 369, 443
klystron, 269, 283
linear and quadratic bunching
of oscillators, 433
retarded field, 290
spatial and phase, 434–445
Buneman–Hartree threshold voltage, 391, 401
Busch theorem, 41, 126
BWO, see Backward wave

Carcinotrons of M-type, 377–383
Cathode lens (immersion objective), 63, 72–75
Cathode plasma, 173, 179
Cathode thermionic, 75
Cauchy problem, 150–152, 162–167
Cavities:
buncher, 264–266
catcher, 273
penultimate, 284–287
toroidal, 265
Centrifugal electrostatic focusing, 171, 205–210
Ceramic sintering, 515
Cerenkov radiation, 300
Cerenkov synchronism, 424
CFA, 410–419
Charge conservation law, 248, 269, 292, 455
Child–Langmuir formula, 130
Classical electron oscillators, 427
Clinotron, 351
Coaxial gyrotrons, 463, 479
Coaxial resonators, 496, 514
Colliders, see Accelerators
Complex resonators, 496
Conductance of electron gap, 251, 267
Continuity theorem, 11, 368
Controlled fusion experiments, 514
Convective instabilities of helical electron beams, 481
Converter quasi-optical, 499
Coupled cavity TWTO, 340
Coupling coefficient, 266
Crossed field amplifiers (CFA), 410–419
Crossed field oscillators, see Backward wave
Crossover, 73
Current:
capacitive, 243, 250
correlation, 242, 268–272, 306–308
displacement, 242
induced, 244–246
total, 242
Cusp magnetic, 44, 472
Cutoff relation, 387
Cyclotron:
frequency (gyrofrequency), 25
resonance, 441, 508
Cyclotron autoresonance masers (CARM), 517–521
Debunching by space charge,
281–283, 296
Differential equations of trajectories, 51–54
Diffraction power output, 499
Diffraction losses, 501
Diodes:
cylindrical, 148
explosive emission, 173–179
foiled anode, 173
foiled free annular, 174
high-frequency with nonzero space charge, 257–260
magnetically insulated, 174–179
oscillator, 260
planar, 118, 129, 144, 529
relativistic planar, 145
spherical, 149
supreme relativistic, 146
volt–ampere characteristics, 146
Dispersion equation:
BWO, 344
FEL, 525
gyro-TWT, 510
MBWO, 377
MTWT, 371
space charge waves, 280
TWTO, 310, 313, 318
Doppler anomalous effect, 425
Doppler frequency up conversion, 426
Doppler normal synchronism, 424
Drift:
equations, 37, 39
gradient, 39
guiding center, 39
transversal, 29, 39
Dryden’s flow, 140
Efficiency:
amplitron, 415–417
BWO, 348, 359
diode oscillator, 260
gyrokystron, 506
gyrotron, 443, 462, 517
klystron multibeam, 287
klystron multi-cavity, 286
klystron two-cavity, 275, 277
magnetron, 394
magnetron, relativistic, 402
magnicon, 439
MBWO, 381
MILO, 408
MTWT, 375
reflex klystron, 293, 296
ubitron, 437
Electron gap, 242, 245, 251
Emission:
crossed field amplifiers (CFA), 419
explosive electron, 171
secondary, 331, 410, 419
self-amplified spontaneous
(SASE), 526
Emittance, 12, 110
Energy:
balance for free and forced stationary
oscillations, 447, 541
conservation law, 18
integral of averaged equations, 455
spread, 476
transfer in MTWT and TWTO, 368
Euler–Lagrange equation, 50
Euler’s motion equation, 123
Explosive emission diodes, 173–179
Floquet theorem, 302
Focal length:
cathode lens, 73
quadrupole lens, 105–108
short magnetic lens, 78
strong magnetic lens, 83
thin aperture lens, 70
thin unipotential and immersion
lenses, 68
Foci, sagittal and meridional, 92
Focusing:
centrifugal electrostatic, 205–208, 211
electrostatic periodical, 226
magnetic periodical, 228–234
multifocusing effect, 79, 83
slalom, 227
strong, 80
Free electron laser (FEL)
applications, 527
linear theory, 523
parameters, 526
Frequency:
bands, 237
electron cyclotron (gyrofrequency), 25
multiplier klystron, 277
plasma, 6, 280
plasma reduction, 281
Frequency oscillation zones of
reflex klystron, 295
Frequency tuning:
BWO, 348
clinotron, 352
gyrotron, 495, 515
magnetron, 396–399
MBWO, 381, 383
reflex klystron, 295
Gain (amplification):
amplitron, 414
BWA 348
gyrokystron, 506
gyro-TWT, see Gyro-TWT
klystron, 285, 288
MTWT, 372
TWTO, 336, 361
Gaussian beams, 362, 403, 499
Gaussian distribution of the
gyrotron hf field, 462
Gauss plane, 89
Girocon, 438
Global instability, 483–485
Grazing intersection, 509
Guiding center, 25, 31, 37–41, 367,
440, 451, 457, 472
Guns:
cathode, 73
centrifugal electrostatic, 171
INDEX

Guns: (Continued)
  Chernov’s, 210
  Chow–Pantell, 471
  cusp-injected, 44, 472
  explosive–emission, 172–179
  Harris–Waters, 209
  high-convergence, 170
  Lomax–Kirstein synthesis method, 153
  magnetron injection gyrotron
    adiabatic, 470, 472–476
  magnetron injection Kino-Taylor, 169, 530
  Meltzer, 156–158
  with wedge-shaped and conic beams, 167

Gyrokystron:
  bandwidth, 506
  construction, 503
  equations, 503–505
  multicavity, 503, 506

Gyrotron:
  applications
    electroncyclotron current
      drive (ECCD), 513
    electron–cyclotron resonance heating
      (ECRH), 513
    generation of multiply charged ions
      and soft X-rays, 515
    gyrokystron RF drivers for TeV linear
      colliders, 517
    microwave procession of
      materials, 515
    millimeter radar systems, 516
    coaxial, 463, 479
    depressed collector, 502
    hard self-excitation regime, 467,
      494, 497
    large orbit, 442
    multibeam, 498
    nonsynchronous parameter, 434
    output power system, 499
    quasirelative, 495
