SECTION I: THE NEUROBIOLOGY OF THINKING 1

1 Introduction and History 4
   KEY THEMES 4
   A BRIEF (AND SELECTIVE) HISTORY 8
   Localization of function vs. mass action 8
   The first scientifically rigorous demonstrations of localization of function 12
   The localization of motor functions 13
   The localization of visual perception 14
   The localization of speech 16
   WHAT IS A BRAIN AND WHAT DOES IT DO? 18
   LOOKING AHEAD TO THE DEVELOPMENT OF COGNITIVE NEUROSCIENCE 19
   END-OF-CHAPTER QUESTIONS 20
   REFERENCES 21
   OTHER SOURCES USED 21
   FURTHER READING 21

2 The Brain 22
   KEY THEMES 22
   PEP TALK 24
   GROSS ANATOMY 24
   The cerebral cortex 28
   THE NEURON 30
   Electrical and chemical properties of the neuron 31
   How neurons communicate: the action potential 34
   How neurons communicate: the postsynaptic consequences of neurotransmitter release 35
   Different neurotransmitters and different receptors can produce different effects on the postsynaptic cell 37
   Housekeeping in the synaptic cleft 38
   Neuroanatomical techniques exploit the physiology of the neuron 40
   OSCILLATORY FLUCTUATIONS IN THE MEMBRANE POTENTIAL 43
   Neurons are never truly “at rest” 43
   Synchronous oscillation 45
   COMPLICATED, AND COMPLEX 47
   END-OF-CHAPTER QUESTIONS 47
   REFERENCES 48
   OTHER SOURCES USED 48
   FURTHER READING 49
SECTION II: SENSATION, PERCEPTION, ATTENTION, AND ACTION 51

3 Sensation and Perception of Visual Signals 54

KEY THEMES 54
THE DOMINANT SENSE IN PRIMATES 56
ORGANIZATION OF THE VISUAL SYSTEM 56
The visual field 56
The retinotopic organization of primary visual cortex 58
INFORMATION PROCESSING IN PRIMARY VISUAL CORTEX – BOTTOM-UP FEATURE DETECTION 63
The V1 neuron as feature detector 63
Columns, hypercolumns, and pinwheels 66
Behind the pinwheel 68
INFORMATION PROCESSING IN PRIMARY VISUAL CORTEX – INTERACTIVITY 69
Feedforward and feedback projections of V1 69
Corticothalamic loops, center-surround inhibition, and signal-to-noise ratio 72
Setting the state of thalamic neurons: tonic mode vs. burst mode 72
Circularity? It can depend on your perspective 73
The relation between visual processing and the brain’s physiological state 73
WHERE DOES SENSATION END? WHERE DOES PERCEPTION BEGIN? 81
END-OF-CHAPTER QUESTIONS 82
REFERENCES 83
OTHER SOURCES USED 83
FURTHER READING 84

4 Audition and Somatosensation 85

KEY THEMES 85
APOLOGIA 87
AUDITION 87
Auditory sensation 87
What is it that we hear? 87
Mechanical transmission and neural transduction 87
Spectral decomposition performed by the basilar membrane 88
Auditory perception 93
The auditory evoked response 93
The organization of auditory cortex 93
Top-down control of auditory transduction 98
Age-related hearing loss 98
Adieu to audition 98
SOMATOSENSATION 99
Transduction of mechanical and thermal energy, and of pain 99
Somatotopy 99
Somatotopy in the rodent: barrel cortex 105
Somatosensory plasticity 112
Use-dependent plasticity 113
The brain mimics the body 113
Mechanisms of somatosensory plasticity 115
Phantom limbs and phantom pain 115
A hypothesized mechanism 115
Helpful or harmful? 116
Proprioception 116
Adieu to sensation 117
END-OF-CHAPTER QUESTIONS 117
REFERENCES 118
OTHER SOURCES USED 118
FURTHER READING 119

5 The Visual System 120

KEY THEMES 120
FAMILIAR PRINCIPLES AND PROCESSES, APPLIED TO HIGHER-LEVEL REPRESENTATIONS 122
TWO PARALLEL PATHWAYS 122
A diversity of projections from V1 122
A functional dissociation of visual perception of what an object is vs. where it is located 124
Interconnectedness within and between the two pathways 131
THE ORGANIZATION AND FUNCTIONS OF THE VENTRAL VISUAL PROCESSING STREAM 135
Hand cells, face cells, and grandmother cells 135
Electrophysiological recordings in temporal cortex 135
Basal ganglia 217
A subcortical gate on cortical activity 218
The role of dopamine 218
COGNITIVE FUNCTIONS OF THE MOTOR SYSTEM 221
IT’S ALL ABOUT ACTION 221
END-OF-CHAPTER QUESTIONS 226
REFERENCES 226
OTHER SOURCES USED 227
FURTHER READING 227

8 Oculomotor Control and the Control of Attention 229

KEY THEMES 229
ATTENTION AND ACTION 231
WHYS AND HOWS OF EYE MOVEMENTS 231
Three categories of eye movements 231
THE ORGANIZATION OF THE OCULOMOTOR SYSTEM 232
An overview of the circuitry 232
The superior colliculus 233
The posterior system 235
The frontal eye field 235
The supplementary eye field 236
THE CONTROL OF EYE MOVEMENTS, AND OF ATTENTION, IN HUMANS 237
Human oculomotor control 237
Human attentional control 238
The endogenous control of attention 241
The exogenous control of attention 242
THE CONTROL OF ATTENTION VIA THE OCULOMOTOR SYSTEM 243
Covert attention 243
Covert attention as motor preparation? 243
Empirical evidence for covert attention as motor preparation 243
Where’s the attentional controller? 243
The reentry hypothesis 246
ARE OCULOMOTOR CONTROL AND ATTENTIONAL CONTROL REALLY THE “SAME THING”? 246

The “method of visual inspection” 250
“Prioritized Maps of Space in Human Frontoparietal Cortex” 250
OF LABELS AND MECHANISMS 253
END-OF-CHAPTER QUESTIONS 255
REFERENCES 255
OTHER SOURCES USED 256
FURTHER READING 257

SECTION III: MENTAL REPRESENTATION 259

9 Visual Object Recognition and Knowledge 262

KEY THEMES 262
VISUAL AGNOSIA 264
Apperceptive agnosia 264
Associative agnosia 265
Prosopagnosia 266
COMPUTATIONAL MODELS OF VISUAL OBJECT RECOGNITION 266
Two neuropsychological traditions 266
Cognitive neuropsychology-influenced models 266
Critiques of cognitive neuropsychology-influenced models 268
Parallel distributed processing (PDP)-based models offer a neurally plausible alternative for modeling cognitive processes and architectures 268
The cognitive neuroscience revolution in visual cognition 271
CATEGORY SPECIFICITY IN THE VENTRAL STREAM? 271
Are faces special? 271
“The Guns of August” 271
Questions raised by the Kanwisher et al. (1997) findings 275
Perceptual expertise 275
Greeble expertise 276
Evidence for a high degree of specificity for many categories in ventral occipitotemporal cortex 276
## Neural Bases of Memory

### Key Themes
- Plasticity, Learning, and Memory
- The Case of H. M.

### The Case of H. M.
- Bilateral medial temporal lobectomy
- The global amnesic syndrome
- The organization of memory
- The subjective experience of amnesia
- Hippocampus vs. MTL?

### Association Through Synaptic Modification
- The example of Pavlovian conditioning
- Hebbian plasticity
- Long-term potentiation
- Hippocampal circuitry and its electrophysiological investigation
- The NMDA glutamate receptor as coincidence detector
- Multiple stages of synaptic strengthening
- The necessity of NMDA channels for long-term memory formation

### How Might the Hippocampus Work?
- Fast-encoding hippocampus vs. slow-encoding cortex
- Episodic memory for sequences
- Episodic memory as an evolutionary elaboration of navigational processing

## Declarative Long-Term Memory

### Key Themes
- The Cognitive Neuroscience of LTM
- Encoding

### The Cognitive Neuroscience of LTM
- Neuroimaging the hippocampus
- Novelty-driven “encoding”
- Subsequent memory effects in the PFC and MTL
- Uneven evidence for encoding-related activity in hippocampus
- Incidental encoding into LTM during a short-term memory task
- Signal intensity-based analysis of the subsequent memory effect
- A short-term memory buffer to bridge the temporal gap between to-be-associated events
- Functional connectivity-based analysis of the subsequent memory effect

### The Hippocampus in Spatial Memory
- Retrieval
- Retrieval without awareness
- Documenting contextual reinstatement in the brain
12 Semantic Long-Term Memory 336

KEY THEMES 336

KNOWLEDGE IN THE BRAIN 338
DEFINITIONS AND BASIC FACTS 338
CATEGORY-SPECIFIC DEFICITS FOLLOWING BRAIN DAMAGE 339

Animacy, or function? 339
A PDP model of modality-specificity 340
The domain-specific knowledge hypothesis 341

THE NEUROIMAGING OF KNOWLEDGE 342
The meaning, and processing, of words 342
An aside about the role of language in semantics and the study of semantics 344

PET scanning of object knowledge 344
Knowledge retrieval or lexical access? 347
Knowledge retrieval or mental imagery? 349

THE PROGRESSIVE LOSS OF KNOWLEDGE 349
Primary Progressive Aphasia or Semantic Dementia, what’s in a name? 349
Nonverbal deficits in fluent primary progressive aphasia? 352
The locus of damage in fluent primary progressive aphasia? 353
Distal effects of neurodegeneration 354
Entente cordiale 355

NUANCE AND CHALLENGES 356

END-OF-CHAPTER QUESTIONS 357
REFERENCES 357
OTHER SOURCES USED 358
FURTHER READING 359

13 Short-Term and Working Memory 360

KEY THEMES 360

“PROLONGED PERCEPTION” OR “ACTIVATED LTM?” 362
DEFINITIONS 362

ELEVATED, SUSTAINED ACTIVITY 365
Early focus on role of PFC in the control of STM 365
Single-unit delay-period activity in PFC and thalamus 365
The implications, and influence, of these first studies of PFC electrophysiology 368

Working memory 368
The extracellular electrophysiology of “working memory” 369

A third(?) generation of PFC lesion studies 374
STM vs. working memory 375

A BRAVE NEW WORLD OF MULTIVARIATE DATA ANALYSIS 382
The tradition of univariate analyses 382
MVPA of fMRI 382
Increased sensitivity reveals delay-period storage in “silent” areas 382
Increased specificity reveals absence of stimulus information in elevated delay-period activity 384

The neural bases of STM 386
Retrospective MVPA of single-unit extracellular recordings 386
A population-level analysis of “Dynamic Coding for Cognitive Control in Prefrontal Cortex” 386

THREE-QUARTERS OF A CENTURY 391

END-OF-CHAPTER QUESTIONS 391
REFERENCES 391
OTHER SOURCES USED 393
FURTHER READING 393
The temporoparietal junction (TPJ) 458
Challenge to the specificity of TPJ for ToM 459
False beliefs (?) about Rebecca Saxe’s mind 461
fMRI with higher spatial resolution 461
rTMS of TPJ during moral judgments 462
Moral judgments, TPJ, and autism spectrum disorder 464
A final assessment of the role of TPJ in ToM mentalization 464

OBSERVATIONAL LEARNING 467
TRUSTWORTHINESS, REVISITED 473
END-OF-CHAPTER QUESTIONS 473
REFERENCES 473
OTHER SOURCES USED 475
FURTHER READING 475

17 Emotion 476
KEY THEMES 476
EMOTION PROCESSING AND MENTAL HEALTH 478
TRUSTWORTHINESS, REVISITED 478
A role for the amygdala in the processing of trustworthiness 478
Neuropsychological evidence 478
fMRI evidence 478
Implicit information processing by the amygdala 480
THE AMYGDALA 480
Klüver–Bucy syndrome 480
Pavlovian fear conditioning 482
Induction 482
Distinguishing avoidance learning from fear conditioning 484
Emotional content in declarative memories 485
Pharmacological interference with norepinephrine 485
Emotional declarative memory in patients with amygdala lesions 485
The amygdala’s influence on other brain systems 487
What emotions does the amygdala process? 488

WHAT IS AN EMOTION? 488
THE CONTROL OF EMOTIONS 491
Extinction 491
Research in the rodent 492
The roles of midline frontal cortex 492
Fear conditioning and extinction in the human 493
“Real-time,” volitional control of emotions 493
The good and the bad of emotion regulation 495
THE AMYGDALA AS AFFECTIVE HUB 495
END-OF-CHAPTER QUESTIONS 498
REFERENCES 499
OTHER SOURCES USED 500
FURTHER READING 501

18 Language 502
KEY THEMES 502
A SYSTEM OF REMARKABLE COMPLEXITY 504
WERNICKE–LICHTHEIM: THE CLASSICAL CORE LANGUAGE NETWORK 504
The aphasias 504
The functional relevance of the connectivity of the network 505
SPEECH PERCEPTION 506
Segregation of the speech signal 506
The elements of language 506
The speech signal 507
Neural correlates of speech perception 509
Dual routes for speech processing 509
GRAMMAR 512
Genetics 512
Rules in the brain? 515
Broca’s area 516
The anatomy and connectivity of Broca’s area 516
Functional accounts of Broca’s area 516
The electrophysiology of grammar 519
SPEECH PRODUCTION 520
A psycholinguistic model of production 521
Forward models for the control of production 521
Necessary neural substrates? 523
ALL TOGETHER NOW 527
“AROUSING NOVEL IDEAS AND SUBTLE PERCEPTIONS AND JUDGMENTS” … WITH THE WRITTEN WORD 527
END-OF-CHAPTER QUESTIONS 527
REFERENCES 527
OTHER SOURCES USED 529
FURTHER READING 530

Consciousness 531

KEY THEMES 531
THE MOST COMPLEX OBJECT IN THE UNIVERSE 533
DIFFERENT APPROACHES TO THE PROBLEM 533
THE PHYSIOLOGY OF CONSCIOUSNESS 534
Neurological syndromes 534
Coma 534
Vegetative state/UWS 535
Recovery of consciousness from coma or UWS 538
Two dimensions along which consciousness can vary 538
Sleep 539
Anesthesia 540
Studying anesthesia with TMS/EEG 540
Studying anesthesia with surface EEG and deep brain EEG 543
Summary across physiological studies 543
BRAIN FUNCTIONS SUPPORTING CONSCIOUS PERCEPTION 545
Are we conscious of activity in early sensory cortex? 546
What intrinsic factors influence conscious visual perception? 547
Bottom-up and top-down influences on conscious visual perception 547
The role of reentrant signals to V1 548
Manipulating extrinsic factors to study conscious vs. unconscious vision 549
THEORIES OF CONSCIOUSNESS 552
Global Workspace Theory 552
Recurrent Processing Theory 553
Integrated Information Theory 555
A practical application of Integrated Information Theory 556
UPDATING THE CONSCIOUSNESS GRAPH 558
END-OF-CHAPTER QUESTIONS 558
REFERENCES 558
OTHER SOURCES USED 560
FURTHER READING 560

Glossary 562
Index 571
