- \( \text{AA}_3 \text{B}_4 \text{O}_{12} \)-related phases: 48–51
  - charge states: 50
  - charge transfer: 51
  - physical properties: 50
- \( \text{ABX}_3 \) perovskite phases: 1–2
- \( \text{ABX}_3 \) perovskite structure: 1–40
  - variants: 11–12
- \( \text{ABX}_3 \)-related structures: 42–78
- anion-deficient phases containing \( \text{BaO}_2 \) (\( c' \)) layers: 112–117
- anion-deficient phases containing square pyramids: 69–74
- cobaltite-related phases: 73–74
- \( \text{LnBaCo}_2 \text{O}_{5.5} \) phases: 73–74
- manganites: 69–71
- \( \text{Sr}_2 \text{Mn}_2 \text{O}_5 \): 69–71
- \( \text{SrFeO}_{2.5} \) and related phases: 71–73
- anion-deficient phases containing tetrahedra: 57–68
- brownmillerite microstructures: 62–63
- brownmillerite-related phases: 66–68
- brownmillerites: 57–62
- B-site doped brownmillerite phases: 64–65
- B-site doping and oxygen pressure: 65
- A-site doped brownmillerite phases: 65–66
  - temperature variation and disorder: 63–64
- anion-deficient phases with \( \text{BaOX} \)
  - layers: 117–119
- anion substituted perovskites: 51–54
- nitrides/oxy-nitrides: 51–53
- oxyfluorides: 53–54
- antiferroelectrics: 196–199
- antiferromagnetic perovskites: 222–232
  - cubic perovskite-related structures: 222–229
  - hexagonal perovskites: 229–232
  - antiperovskite (inverse) perovskite structure: 3
- antiperovskites: 34–36
- \( \text{BiNb}_4 \), 2H–\( \text{BaNiO}_3 \): 36
- cubic and related structures: 34–36
- \( \text{SbNb}_4 \), 2H–\( \text{BaNiO}_3 \): 36
- aristotype perovskite structure: 4–6
- Arrhenius equation
  - diffusion: 156–157
  - ionic conductivity: 159
- A-site-deficient perovskite structures: 54–57
  - niobates: 55–57
  - perovskite tungsten bronzes: 55
  - \( \text{ReO}_3 \), \( \text{WO}_3 \) and related structures: 54–55
  - tantalates: 55–57
  - titanates: 55–57
- A-site ordering: 33–34, 48
- Aurivillius phases
  - modular structures: 134–136
  - multiferroic perovskites: 244–246
