INDEX

A
ACECTS. See Atypical childhood epilepsy with centro-temporal spikes (ACECTS)
Acoustic features of speech, 26–30
Acquired epileptic aphasia
as lesional epilepsy, 10–12
pathophysiology of, 107–109
Acquired epileptic dysgraphia, 85–86
Acquired epileptic frontal syndrome, 92–94
Acquired epileptic opercular syndrome (AEOS), 37, 83–85, 109–110
Acquired epileptiform opercular syndrome, 84
Acquired language deficits with rolandic epilepsy, 87–90
Acquired lexical-semantic aphasia in EAS, 48
Acquired verbal auditory agnosia, 15
ADHD. See Attention-deficit hyperactivity-disorder (ADHD)
Adrenocorticotropic hormone (ACTH), 54
ADRESD. See Autosomal dominant rolandic epilepsy and speech dyspraxia (ADRESD)
AEOS. See Acquired epileptic opercular syndrome (AEOS)
Aetiology
pathogenesis and, 8
responsible for aphasia and epilepsy, 9
Antiepileptic therapy, 66, 127
Aphasia, 9, 34–35
acquired epileptic, 10–12
without language fluctuations, 40–41
Aphasic symptoms in LKS, 48–56
acquired lexical-semantic aphasia in EAS, 48
impairments in reading and writing, 53–56
isolated production deficit evolving to prolonged mutism, 49–50
loss of regional accent and foreign accent syndrome, 51–52
musical abilities in children, 52–53
psychological speech inhibition in cases of mutism, 50
speech production deficits and mutism, 48–49
ASD. See Autistic spectrum disorder (ASD)
Attention-deficit hyperactivity-disorder (ADHD), 57
Atypical childhood epilepsy with centro-temporal spikes (ACECTS), 22–23
Auditory agnosia, 44–45
declared, 29
severe permanent, 152–153
Auditory disturbances in rolandic epilepsy, 79–80, 88–90
Auditory hallucinations, 78
Autistic regression, 66–69
Autistic spectrum disorder (ASD)
advances in research on, 60
children diagnosed with, 67–68
Autoimmune diseases
epileptic seizures and, 100–101
Autosomal dominant rolandic epilepsy and speech dyspraxia (ADRESD), 90–92
BCERS. See Benign childhood epilepsy with rolandic spikes (BCERS)
BECTS. See Benign epilepsy with centrotemporal spikes (BECTS)
Behavioural regression, 58–59
Benign childhood epilepsy with rolandic spikes (BCERS), 21
Benign epilepsy with centrotemporal spikes (BECTS), 18, 21–22
Benign rolandic epilepsy (BRE), 21
Bilateral perisylvian polymicrogyria, 12
Billard, Michel, 14
Bishop, Dorothy, 26–30, 65
Brain anatomy and organization in children, with rolandic epilepsy, 81–83
Brain MRI, LKS and, 97–100
beyond the resolution of conventional, 98
conventional, 97–98
multimodal functional, 98–99
BRE. See Benign rolandic epilepsy (BRE)
C
Case studies
epileptic speech deficit in a young girl with epilepsy and CSWS, 164–165
laboratory investigations in LKS and EAS, 101–102
of Landau–Kleffner syndrome (LKS), 34–36, 72–73
prolonged auditory agnosia and behaviour disorder, 165–166
prolonged mutism, 163
recurrent loss of hearing, 9–10
rolandic epilepsy, 14–15
on rolandic seizures, 163–164
verbal auditory agnosia (VAA), 146–151
CECTS. See Childhood epilepsy with centro-temporal spikes (CECTS)
Childhood
idiopathic focal epilepsies (IFE) of, 21
Landau-Kleffner syndrome (LKS) in, 1
Childhood epilepsy with centro-temporal spikes (CECTS), 22
Children
with bilateral perisylvian polymicrogyria, 12
brain anatomy and organization in, with rolandic epilepsy, 81–83
with cognitive-behavioural impairments, 68–69
course of language development, 62–63
diagnosed with ASD, 67–68
with early onset/developmental LKS, 77
EEG abnormalities in, 64–66
effects of IED suppression in, 134–135
language fluctuations in, with LKS, 38–42
musical abilities in, with LKS, 52–53
Sylvian seizures and midtemporal spike foci in, 14
textbooks on language disorders in, 137–138
total communication in, 138
use of gestures, 146
using sign language, 142–146
Clinical genetic studies of LKS, 102–103
Clinical vignettes of LKS
initial verbal agnosia and cognitive regression with severe prolonged expressive aphasia, 34–35
severe global auditory agnosia with a short course, 35–36
Cognitive-behavioural deterioration, 59
Cognitive-behavioural impairments, 68–69
Cognitive dysfunction, rolandic epilepsy and, 80–81
Cognitive epilepsies, 1
Cognitive impairments in LKS
drug management of, 127–136
Cognitive regression, 13, 34–35
Combined metabolic and electrophysiological study in LKS, 99–100
Congenital verbal auditory agnosia, early acquired vs., 64–66
Continuous spike-and-wave during sleep, 18
Continuous spike waves during slow sleep (CSWS), 14
activity in sleep and awake state, 124–126
disturbances of synaptic homeostasis and, 115–117
epilepsy with, 20
epileptic encephalopathy with, 19–21
FDG-PET and EEG-fMRI studies, 124–126
long-lasting effects of, 121–123
memory consolidation and, 117–118
neuropsychological impairment in, 115–117
role in language and cognitive-behavioural deterioration, 114–115
role in language and cognitive-behavioural regression, 112–117
role in language deficit of LKS, 115
spike-wave index (SWI) for, 19–20
thalamus, a key player in, 112–114
transient changes in brain function associated with, 123–124
Corticography, 96
CSWS. See Continuous spike waves during slow sleep (CSWS)

D
Definite LKS, 75
Delayed initial language development, 75
Dementia, language loss as first sign of Heller’s, 5–7
Developmental age spectrum, 25
Developmental dysphasia, 63
Developmental language disorders (DLD), 61
epileptiform discharges in, 63–66
indications for EEG in child with, 66
and LKS, 61–66
Diazepines, 13
Dissociation between comprehension and expression, 45–48
DLD. See Developmental language disorders (DLD)
Documentation of LKS, 87–90
Doose syndrome, 22
Drug management
antiepileptic therapy, 127
of cognitive impairments in LKS, 127–136
duration of therapy, 131–132
evaluation of drug therapy, 130–131
initiation and choice of therapy in LKS, 128–129
steroid therapy, 129–130
surgical therapy, 132–134
Duration of therapy, 131–132

E
EAS. See Epilepsy aphasia spectrum (EAS)
ECWS. See Epilepsy with continuous spike and waves during sleep (ECWS)
EEG. See Electroencephalography (EEG)
EEG findings. See Electroencephalographic (EEG) findings
Epilepsy-aphasia spectrum (EAS) syndrome
steroid therapy in, 129–130
Index

H
Heller's dementia, language loss as sign of, 5–7

I
Idiopathic focal epilepsy (IFE), 1, 2, 21, 86–87
IEAD. See Intermediate epilepsy-aphasia disorders (IEAD)
IEDs. See Interictal epileptic discharges (IEDs)
IFE. See Idiopathic focal epilepsy (IFE)
ILAE. See International League against Epilepsy (ILAE)
Interictal epileptic discharges (IEDs), 2, 39, 61, 119
functional neuroimaging techniques and, 120–121
pathophysiology of, 168
suppression in children, effects of, 134–135
Intermediate epilepsy-aphasia disorders (IEAD), 24
International League against Epilepsy (ILAE), 1, 18

L
Landau-Kleffner syndrome (LKS)
aetiology and mechanism of, 8
anatomo-functional model and, 31–33
aphasic symptoms in, 48–56
behavioural disorders in, 56–58
case studies, 9–10, 72–73, 101–102, 163–166
in children, 1–3
children with early onset/developmental, 77
clinical vignettes of, 34–36
cognitive and behavioural regression of, 58–59
cognitive impairments in, 127–136
common features between rolandic epilepsy and, 17
conceptual errors and facts about, 3
CSWS role in language deficit of, 115
definite, 75
definition of, 70
description of, 4–5, 7–8
diagnosis of, 5, 11–12, 63
disturbances of synaptic homeostasis and, 115–117
DLD and early onset of, 61–66
documentation of, via EEG and functional imaging, 87–88
drug management, 127–136
antiepileptic therapy, 127
duration of therapy, 131–132
evaluation of drug therapy, 130–131
initiation and choice of therapy in, 128–129
steroid therapy in, 129–130
surgical therapy, 132–134
dynamics of language deficit in, 107
epilepsy and language impairment in, 36–37
epileptic and motor manifestations of, 37–38
epileptic dysfunction as main factor in, 12–14

F
FAS. See Foreign accent syndrome (FAS)
Focal auditory seizures, 37–38
Focal spike-induced cerebral dysfunction, 110–111
Foreign accent syndrome (FAS), 51–52
Functional imaging, documentation of LKS via, 87–88
Functional neuroanatomy of language, 30–31
Functional neuroimaging techniques, 120–121
with cognitive epilepsies, 119–126
CSWS activity in sleep and awake state, 124–126
IEDs and, 119–126
long-lasting effects of CSWS on, 121–123

G
Genetics of EAS, 102–105
Geschwind, Norman, 13
Global auditory agnosia, 29–30, 35–36
Goodglass, Harold, 13
GRIN2A mutations, 103–105

Electrical status epilepticus during sleep (ESES), 14
vs. CSWS, 19
Electroencephalographic (EEG) findings abnormalities in children, 64–66
documentation of LKS via, 87–88
LKS with, 95–97
Electroencephalography (EEG), 1, 4
Epilepsy, 9
acquired epileptic aphasia, 10–12
classification of, 60
with CSWS, 18, 20–21
language impairment in LKS and, 36–37
medication for, 13
rolandic, 13
role in LKS, 13
Epilepsy-aphasia spectrum (EAS), 2, 24–25
acquired lexical-semantic aphasia in, 48
anatomo-functional model and, 31–33
case studies, 101–102
classification of, 60
defined, 19
genetics of, 102–105
twins or siblings with, 68–69
Epilepsy with continuous spike waves during slow wave sleep (CSWS), 18
Epileptic dysfunction, 12–14
Epileptic encephalopathy, 18
with CSWS, 19–21
Epileptic language disorder, 75
Epileptic pseudoataxia, 37
Epileptic seizures, 37
autoimmune diseases and, 100–101
Epileptiform discharges in DLD, 63–66
Ethosuximide, 13
