complications 51
vascular injury 51
visceral injury 51
design 82
iatrogenic complications 98
placement 49
direct insertion technique 49
Hasson technique 49–50
Veress needle technique 49

U

ultrasonic dissectors 62–3
Univent Uniblocker 262–3
ureteronephrectomy, laparoscopic 185–6
anatomy 186
complications 190
diagnostic evaluation 186
patient preparation
port position and working space 187
positioning 187
surgical preparation 187
patient selection 186–7
postoperative care 190
prognosis 190
surgical technique 188–9
instrumentation 187–8
urolith removal, laparoscopic-assisted
anatomy 197–8
cats 196–7
complications 204
diagnostic workup and imaging 197–8
dogs 196–7
management 195
pathophysiology 196–7
patient preparation 199
patient selection 198
postoperative care 204–5
prognosis 204
surgical management 195–6
surgical techniques
equipment 199–201
laparoscopic-assisted cystoscopy 202–3
laparoscopic-assisted cystoscopy, modified 203–4
port position and working space 201
transurethral cystoscopy 201–2
technique selection 198–9
veterinary surgical management 196
V variable viewing angle laparoscopic telescopes 33–4
vascular ring anomaly treatment 319–20
diagnosis and imaging 321
patient preparation 321
positioning 321
patient selection 319–21
postoperative care 324
surgical technique 322–4
approach 322
vasectomy, laparoscopic surgical techniques 222
Veress needle (VN) technique 49
abdominal access 82–4
thoracoscopy 273
verification methods 84
Veterinary Applied Laparoscopic Training (VALT) laboratory
augmented reality (AR) simulations 7–8
box trainers 4–6
intracorporeal technique
needle positioning 16
optimal training program 9
feedback 10
motivation 9–10
practice opportunities 10
tasks and goals 9
video game simulations 8–9
