Subject Index 289

helium ion microscopy, 207
hierarchical materials, 9
hydrogels, 190, 221

lyophilization (freeze-drying) effects, 70

mesoporous materials and structures
active photonic cellulose films, 197
chiral, mesoporous polymer films, 214
cotemplating approach, 197
hard templating approach, 210
mesoporous photonic cellulose films, 197
mesoporous plastics, 214
mesoporous silica and organosilica, 204
refractive index sensing, 208
responsive chiral actuators, 219
responsive photonic hydrogels, 221
soft templating approach, 203

nanotechnology
perspectives on, 1
societal ramifications, 3

pharmaceuticals, 233
pickering emulsions, 184
polymer nanocomposites
CNC drying effects on dispersion and rheology, 160
CNC in compatible polymer systems, 150
cross-linking density (thermosetting polymers), 172
crystallinity, 165
dispersion, 156
dynamic mechanical performance, 170, 176
percolation theory and modeling, 153, 178
post-polymerization compounding, 154
reinforcement potential of CNC, 159
surface energy and surface functionalization effects, 156
surface functionalization (compatibilization), 142
toughness enhancement, 175
polymerization
emulsion, 228
in-situ, 165

rheological properties of CNC suspensions
ageing and yielding characteristics, 123
concentration effects on microstructure, 100
ionic strength effects on microstructure, 118
sonication effects on microstructure, 98
surface charge effects on microstructure, 112
temperature effects on microstructure, 106

solid-state nuclear magnetic resonance (SS-NMR), 65, 71, 81
structural color in nature, 8
thermal stability of CNC, 129
time-of-flight secondary ion mass spectroscopy (ToF-SIMS), 44

X-ray diffraction, 76
