1 Introduction to the Major Classes of Bioactives Present in Fruit 1
Anusoooya Gnanavinthan

- Bioactives 1
- Classification of plant-derived bioactives 1
  - Phenolic compounds 1
  - Dietary fibre (DF) 9
  - Proteins and peptides 11
  - Carotenoids 11
  - Functional lipids 11
- Bioactives in fruits 12
- Conclusion 14
- References 14

2 Fibre in Fruit 19
Bronwen G. Smith

- Introduction 19
- Dietary fibre 19
- Fruit 20
- Plant tissues and types of cell walls 20
- Cell wall polysaccharides 21
- Effects of cooking or processing on cell wall composition 25
- Health benefits 26
- Future considerations for health functionality 27
- References 28

3 Bioavailability of Antioxidant Compounds from Fruits 35
Iris F.F. Benzie and Sissi Wachtel-Galor

- Introduction 35
- Antioxidants in fruits 36
  - Vitamin C (ascorbic acid) 37
  - ‘Vitamin E’ 37
  - Carotenoids 38
  - Flavonoids 40
  - ‘Total’ antioxidant content of fruits 41
Contents

Factors that affect antioxidant response to ingestion of fruit: ‘apparent’ and ‘real’ bioavailability  42
Intrinsic antioxidant content of fruit  43
Bioaccessibility and bioavailability of antioxidants in fruit  45
Ascorbic acid  45
Vitamin E  46
Carotenoids  46
Flavonoids  47
‘Total antioxidants’  49
Getting to the end: a note on colonic metabolites  51
Finally, increasing bioavailability of antioxidants: can it and should it be done?  51
   A few thoughts on these questions  53
Conclusions  53
Acknowledgements  54
Declaration of interest  54
References  54

4 Pharmacokinetic and Pharmacodynamic Interaction of Functional Foods with Medicines  59
   Shizuo Yamada, Yuko Taki, Shingen Misaka, Takashi Okura, Yoshiharu Deguchi, Keizo Umegaki, Hiroshi Watanabe, Yasuo Watanabe and Margot Skinner

Introduction  59
Fruits  60
   Grapefruit juice  60
   Interactions mediated by drug transporters  62
   New Zealand fruit extracts  62
Ginkgo biloba extract (GBE)  63
   Use of GBE and its constituents  63
   Induction of CYPs  63
   Mechanism of induction of hepatic drug-metabolizing enzymes  65
   Pharmacodynamic interaction  66
   Clinical study  66
Green Tea  68
   Green tea catechins  68
   Cytochrome P450 enzyme-mediated interactions  69
   Transporter-mediated interaction  71
   Interactions through other mechanisms  72
Saw palmetto extract (SPE)  72
Conclusions  73
Acknowledgements  74
References  74

5 Health Properties of Apple and Pear  81
   Richard Espley and Stefan Martens

Introduction  81
The origin of apples  81
Domestication of apples  82
Apple production  82
## Contents

Major classes of apple bioactives 82
- Dihydrochalcones – phloridzin 83
- Flavonols – quercetin, kaempferol 84
- Flavan-3-ols – catechins, epicatechins and its di-, oligo- and polymers 84
- Anthocyanins – cyanidins 84
- Carotenoids 85
- Other phytochemicals/bioactives 85

Biosynthesis and genetic regulation of apple bioactives 86
- Dihydrochalcones 86
- Flavonoids 86
- Anthocyanins 87
- Carotenoids 88

Apple and human health 88
- Bioavailability of apple bioactives 88
- Antioxidant activity of apple and apple products 89
- Cancer 90
- Cardiovascular disease 91
- Diabetes 91
- Asthma 91
- Cognitive processes 92
- Gastrointestinal health 92

Storage and processing 93
- Strategies to improve the bioactive content of apples 93
- Conclusions 94
- References 94

6 Orange and Grapefruit Bioactive Compounds, Health Benefits and Other Attributes 101
Paul F. Cancalon

| Introduction | 101 |
| Composition of citrus | 102 |
| Bioavailability and metabolization of citrus phytochemicals | 102 |
| Citrus and specific ailments | 103 |
| Citrus and cardiovascular health | 104 |
| Citrus and cognition | 109 |
| Citrus and cancer | 109 |
| Bone health | 111 |
| Attributes of citrus having raised disproportionate concerns | 111 |
| Grapefruit–drug interaction | 111 |
| Citrus body weight and sugar metabolism | 113 |
| Dental health | 116 |
| Conclusions | 116 |
| References | 117 |

7 Health Benefits from Pomegranates and Stone Fruit, Including Plums, Peaches, Apricots and Cherries 125
Francisco A. Tomás-Barberán, David Ruiz, Daniel Valero, Diego Rivera, Conchita Obón, Catalina Sánchez-Roca and María I. Gil

| Introduction | 125 |
Contents

The origin, diversity and traditional uses of the pomegranate (*PUNICA GRANATUM* L.) 125
The origin, diversity and traditional uses of the stone fruits (*PRUNUS* L.) 126
Phytochemical composition 128
Pomegranate 128
Apricot 131
Peach and nectarine 133
Plums 134
Cherry 136
Effect of processing and storage on pomegranate and stone fruit bioactives 138
Pomegranates 138
Apricots 140
Peach and nectarines 142
Plums 144
Cherry 146
Health effects of pomegranates 149
Cardiovascular diseases 149
Cancer 150
Anti-inflammatory 151
Health effects of stone fruit 151
Apricots 151
Peach and nectarines 153
Plums 154
Cherries 157
Conclusion 158
References 159

8 The Potential Health Benefits of the Subtropical Fruits Kiwifruit, Feijoa and Tamarillo 169

Introduction 169
Kiwifruit 169
Benefits from vitamin C 170
Protection from oxidative stress, mutagenicity and cancer 171
Gut health and digestion 173
Immune health and protection from infection 175
Cardiovascular disease 178
Sleep disorders and the sleep-inducing effects of kiwifruit 179
Other health benefits from kiwifruit 181
Kiwifruit allergies and other detrimental health effects 182
Feijoa 182
Potential protection from infection 183
Potential antioxidant activity 184
Potential anti-inflammatory activity 185
Potential anticancer effect 185
Tamarillo 186
Tentative health benefits of tamarillo 187
Conclusion 187
References 188
9 Effect of Health-promoting Properties of Grapes, Including Resveratrol 197
Susan S. Percival and Robin L. West

Introduction 197
Bioavailability and metabolic fate of compounds 198
Heart health benefits and potential mechanisms of action 200
  Platelet aggregation 201
  Blood pressure 202
  Blood lipids and inflammatory factors 202
  In stressed individuals 204
  Endothelial cell function 204
Immunity 205
Cancer 206
Obesity, metabolic syndrome and diabetes 207
Cognition 208
Conclusion 211
Acknowledgements 211
References 211

10 Potential Health Benefits of Blackcurrants 215
Rosalind Miller, Sophie Putnam, Michael Edwards, Gary Woodward and Colin Kay

Introduction 215
  Occurrence of anthocyanins in the diet 216
  Anthocyanin classification and structural properties 218
  Anthocyanin stability 219
  Anthocyanin metabolism and bioavailability 222
Bioactivity of anthocyanins and metabolites 224
  Metabolic syndrome 224
  Cardiovascular disease 228
  Immunoregulatory 232
  Antimicrobial 232
  Antineurodegenerative 233
  Anticarcinogenic 235
Future direction of research 237
List of abbreviations 237
References 238

11 Overview of the Health Properties of Blueberries 251
Carrie M. Elks, Joseph Francis, April J. Stull, William T. Cefalu, Barbara Shukitt-Hale and Donald K. Ingram

Introduction 251
Bioactive components of blueberries 251
Obesity and insulin resistance 253
  Obesity 253
  Pre-diabetes 253
Type 2 diabetes mellitus 254
Cardiovascular diseases 256
  Endothelial dysfunction 256
Contents

Lipids 257
Blood pressure 257
Cardiac function 259
Cancer 259
Longevity 261
Neuroprotection and aging 262
  Cognitive function 262
  Cellular signalling in the brain 263
  Cerebral ischemia 264
  Parkinson’s disease and Huntington’s disease 265
Gastrointestinal diseases 266
Vision 266
Conclusion 267
References 268

12 Cranberry Polyphenols in the Promotion of Urinary Tract, Cardiovascular and Emerging Health Areas 273
Kerrie L. Kaspar and Christina Khoo

Introduction 273
Bioactives in cranberry 274
  Flavonols 275
  Proanthocyanidins and anthocyanins 276
  Dietary intake of flavonoids 277
Health benefits of cranberry 277
  Urinary tract health 277
  Cardiovascular health 283
  Oral and gastrointestinal health 284
Conclusion 286
References 286
Further Reading/Resources 292

13 Vegetable Fruits: A Cornucopia of Health Benefits 293
Carolyn E. Lister

Introduction 293
Tomatoes 300
  Phytochemical composition of tomatoes 300
  Health benefits of tomatoes 303
  Proposed mechanisms of action of lycopene and other tomato phytochemicals 309
Capsicum 310
  Phytochemical composition of Capsicum 311
  Potential health benefits of Capsicum 313
  Proposed mechanisms of action of capsaicin and other Capsicum phytochemicals 316
Other solanaceous vegetable fruits 317
  Eggplant 317
  Tomatillo 318
Cucurbitaceae 319
  Phytochemical composition of the cucurbitaceae 319
  Proposed mechanisms of action of cucurbitaceae phytochemicals 323
Other vegetable fruits
  Ackee
  Breadfruit
  Okra
Conclusions
References
Further Reading/Resources

14 Potential Health Benefits of Avocados
Donald K. Ingram, Carrie M. Elks, Gary M. Davenport and George S. Roth

Introduction
Antioxidant properties
Cardiovascular and metabolic disease
  Preclinical studies
  Clinical studies
Osteoarthritis/Bone health
  Preclinical studies
  Clinical studies
Inflammation
Cancer
Neuroprotection
Wound healing
Aging
Toxicity
Conclusions
References

15 Cardiovascular Benefits of Olive Oil: Beyond Effects of Fat Content
Elena M. Yubero-Serrano, Antonio Camargo Garcia, Jose Lopez-Miranda and Francisco Perez-Jimenez

Introduction
Factors affecting phenol compound content in VOO
The health effect of VOO
  Cardiovascular benefits of MUFA
  Cardioprotective effects of olive oil phenolic compounds
Conclusion and future perspectives
Acknowledgements
References

16 Cocoa, Blood Flow and the Brain
Crystal F. Haskell and Anthony W. Watson

Introduction
Cultivation and extraction
Active components
Pharmacokinetics and absorption
Mechanism of action
  In vitro
  In vivo
Contents

Human intervention trials ................................................. 372
  Peripheral blood flow .............................................. 372
  Brain activity ...................................................... 374
Epidemiological evidence .................................................. 380
Conclusions .............................................................. 381

18 The Influence of Pre- and Postharvest Environmental Stress on Fruit Bioactives ........................................ 409
  David J. Burritt

  Introduction ......................................................... 409
  The main groups of fruit bioactives sensitive to environmental stressors and their associations with human health ............. 410
    Vitamins C and E ............................................... 410
    Plant phenolics ............................................... 411
    Terpenes ....................................................... 412
    Phytosterols .................................................. 412
  The main environmental stressors that can influence the levels of bioactives in fruits ........................................ 413
    Stress and secondary metabolite production .......... 413
    Quantity versus quality ........................................ 413
    Drought and salinity ........................................... 414
    Changes in temperature ........................................ 414
    Ultraviolet radiation .......................................... 414
    Ionizing radiation .............................................. 415
    Electric currents .............................................. 415
    Chemical priming ............................................. 415
  The influence of environmental stressors and other treatments on the levels of bioactives in some commercially important fruits ............. 416
    Blueberries and raspberries ..................................... 416
    Citrus fruits ................................................... 417
    Grapes ........................................................ 418

19 Recovery of Valuable Bioactives from Residues Arising from Fruit Processing

Zaid Saleh, Reinhold Carle and Dietmar Rolf Kammerer

Introduction

Membrane separation and filtration
Membrane technology
Membrane module design and configurations
Ultrafiltration of polyphenols
Membrane fouling
Fouling characterization
Effect of operating conditions on fouling
Determination of resistances using the resistance-in-series model
Analyses of membrane fouling using the permeate flux variation over time model
Analyses of fouling mechanism and prediction of flux decline
Conclusions

Adsorption and ion exchange processes
Characterization of sorption processes by evaluating sorption kinetics
Characterization of sorption processes at equilibrium: sorption isotherms
Characterization of polyphenol adsorption in single compound model systems
Interaction of phenolic compounds upon adsorption from multicomponent model solutions
Impact of saccharides and amino acids on the interaction of phenolic compounds with adsorber and ion exchange resins
Concentration and fractionation of phenolic compounds using anion exchange resins
Transfer of results from model experiments to the recovery of phenolic compounds from apple and grape pomace
Recovery of preparations rich in phenolic compounds from apple extracts
Recovery and fractionation of apple polyphenols by adsorption technology on pilot-plant scale
Combined recovery of phenolic compounds and pectin from apple pomace
Application of adsorber and ion exchange resins for the valorization of plant food processing byproducts: recovery of proteins and phenolic compounds from sunflower expeller

20 Stability and Bioaccessibility of Fruit Bioactives in Foods: Food Component Interactions and Matrix Effect

Dongxiao Sun-Waterhouse

Introduction

Key components present in fruit-based functional foods
Phytochemicals
Carbohydrates
Proteins
Enzymes
Lipids
Water
Contents

Interactions between fruit bioactives and other food components in various food systems 477
Interactions between polyphenols and lipids 480
Interactions among polyphenols, proteins and starch polysaccharides 482
Interactions between polysaccharide polymers in the absence and presence of fruit polyphenol extracts or fruit juices 486
Effects of beverage matrix containing dietary fibres on fruit bioactives 495
Conclusion and future outlook 498
References 499

Index 509
