soaking and cooking times, 329t
world distribution of, 262t
Aeration, 81
Aflatoxins, 95
Africa, dry beans and pulses utilization in,
261–278
constraints and consumption patterns,
264–266
future research needs, 278
marketing and distribution, 263–264
processing and products, 266–274, 266f
agglomeration, 272–273
canning, 273–274
dry milling, 268–269
fermentation, 272
frying, 271
germination, 272
puffing, 271–272
roasting, 270–271
steaming, 272
wet and dry integrated process, 269–270
wet milling, 267–268
production/utilization, 262–263, 263t–265t
traditional bean products, 274–277, 274t,
275f
Agglomeration, 272–273
Agitating cookers, 150–151
Air classification
chickpeas, 289
cowpea, 247–248
in extraction protocols for protein, 209, 210f
Akara, 249–251, 274, 276
Albumins
in bean flours, 206
cowpea, 240
emulsifying activity, 218
Alkaline extraction, 211
Alkaloids
as antinutritional factors, 363t
beneficial effects of, 363t
α-amylase, 96, 368
α-amylase inhibitors
as antinutritional factors, 362t–363t
beneficial effects of, 363t, 368–369
dehulling effect on composition of, 114,
115t
dry bean/pulses containing, 362t
extrusion cooking effect on, 118
α-galactosidase, 117, 298, 328
Alubia beans, physical characteristics and
cultivars of, 59t
Amino acids
in chickpeas, 288t
content of processed bean and pulses, 105,
106t
in cowpeas, 238–240, 239t
legume composition, 284
lentil composition, 288t
in mung beans, 288t
in pigeon peas, 288t, 300
protein digest corrected amino acid score
(PDCAAS), 253
Amylopectin. See Starch
Amylose. See Starch
Anazaki, soaking and cooking times for, 329t
Angle of repose, 80
Anko, 325
Anthocyanins, 16, 67–68, 178
Anthracnose, 26, 39

   processing procedure effects on content of,
   116t
   soaking effect on content of, 114, 116t,
   139–140
Temperature, storage, 85
Tepary bean, antinutritional constituents in,
   362t
Terminology, legume, 56–58, 57b
Terpenoids
as antinutritional factors, 363t
beneficial effects of, 363t
Testa. See Seed coat
Tex-Mex cuisine, 319
Thermal death time curve, 142–144, 143f
Thermal processing, 141–151
canned beans, 165–168, 166t–168t
quality changes during processing, 176–179
antinutritional factor inactivation, 178–179
lipids, 179
oligosaccharides, 176–177
pectic substances, 177
phytochemicals, 178
proteins, 179
starch, 176
vitamins and minerals, 177–178
commercial sterility, 141
considerations in, 141–146
heat transfer, 144–146, 145f–146f
thermal death time curve, 142–144, 143f
heat penetration, 147
hydrostatic pressure sterilizers, 150–151
lethal rate, 147–150, 148f
formula method, 148–149
kinetics, 149–150
retort, 150–151
agitating cookers, 150–151
continuous, 151
static, 150
Thermocouple, 146–147
Three-bean salad, 163–164, 320
“Three Sisters,” 318
Threshing, 26
Tipiminti, 275
Tocopherol, 111t
Total cholesterol, 343–345
Total dietary fiber, 222–223
Totes
for overseas shipment, 80–81
polyethylene bulk packaging, 83
storage in, 80–81
Trade
global, 6–9, 7f, 8t–9t
US, 9–10, 9t, 10f
Transport
conveyance of harvested beans, 78
pigeon pea, 299
shipping
domestic rail and truck transit, 83
overseas, 84
Truck transport, 83
Trypsin inhibitors
as antinutritional factor, 105–106, 360t, 362t
beneficial effects of, 370
in cowpeas, 242–246, 244f
dehulling effect on composition of, 114, 115t
dry bean/pulses containing, 362t
extrusion cooking effect on, 118, 191
germination effect on activity of, 116
resistance to heat treatment, 117
soaking effect on, 116, 139, 140f, 179
Ultrafiltration, 212
Unsaturated fatty acid, 113t
UPC (universal product code), 83
USAID (Agency for International Development), 18, 19f
USDA standards, 69–71, 70t
Vacuum hydration pretreatment, 134
Value-added processing and products, 12–13, 13f
Velvet bean, antinutritional constituents in, 362t
Very low density lipoprotein cholesterol (VLDL-C), 344
Vetches
in Africa, 263t–265t
global production of, 8, 8t
Indian vetch (Lathyrus sativus), 286f, 303–304
Vicia faba. See Fava beans
Vicilin, 369–370
Vigna angularis. See Adzuki
Vigna mungo. See Black gram
Vigna radiata. See Mung bean
Vigna species, 28
Vigna subterranea. See Bambara groundnut
Vigna unguiculata. See Cowpea
Viscoanalyzer, 221
Viscosity, dietary fiber and, 224
Vitamin B1, in content in bean varieties, 111t
Vitamin B2, in content in bean varieties, 111t
Vitamins
in canned beans, 177
changes during thermal processing, 177
in chickpeas, 288t
composition of processed beans and pulses, 110, 111t
in cowpeas, 241
in lentils, 291t
in mung beans, 294, 295t
in pigeon peas, 300t
VLDL-C (very low density lipoprotein cholesterol), 344
Water absorption capacity (WAC), 217
Water absorption index, 197, 198t
Water extraction, 212
Water holding capacity (WHC), 217
Water retention capacity (WRC), 223–224
Water solubility index, 197, 198t
Weaning foods, 16–17, 253–254
Wet milling
  chickpeas, 289
  processing in Africa, 267–268
Wet processing
  protein extraction for bean fractions, 211–213
    acid extraction, 211–212
    alkaline extraction, 211
    comparison of techniques, 212–213
    salt extraction, 212
    ultrafiltration method, 212
    water extraction, 212
  starch extraction for bean fractions, 213–215, 215f
White kidney bean, physical characteristics and cultivars of, 59t
Winged bean, antinutritional constituents in, 362t
Yellow-eye bean
  appearance of, 58f
  description and culinary uses of, 60
  physical characteristics and cultivars, 59t
  USDA grading standards, 70t
Yellow or green pea soup, 320
Yield
  breeding for, 38–39, 39f
  production trends, 26–27, 27f
  testing, 35
Zinc content
  breeding for, 44–45
  in raw versus cooked beans, 110t
