INDEX

Absorbance (bioinspired light-harvesting), 400–401, 404, 409
Acid-base switch, 375–376
Activation, energy (bioinspired catalysis), 168–170, 174–176, 180, 188, 190, 192, 195
Adhesion, anisotropic, 253
of membranes, 209, 212, 216–223, 245–246
switchable, 274
Adhesive
bioinspired, 251, 253
wet and dry, 252–253
Agelastatin A, 435–437
Algorithm, interactional (bioinspired complex systems), 469
Alkaloids
daphniphyllium, 432–433
indole (bioinspired organic chemistry), 429–430
Allosterialism (bioinspired receptors), 368–369, 388–391
Amphiphile, synthetic, 209–210, 212
Amphiphilic, polymer (bioinspired polymer chemistry), 337–340, 344
Amplification (bioinspired complex systems), 456–460, 462, 469
Anisotropic, adhesion, 253
Antenna (bioinspired light-harvesting), 397, 399
Approach, trajectory of catalyst-bound reactants (bioinspired catalysis), 201
Aragonite, 141, 146
Architecture, polymeric, 327, 334, 338, 342–343, 349, 358
Artificial
cells (biomimetic amphiphiles/vesicles), 239, 242, 244, 246
glycocalix (biomimetic amphiphiles/vesicles), 218
Aspect ratio, high (bioinspired adhesives), 251, 253–258, 265, 269, 272, 276, 285
Assembly
layer-by-layer (bioinspired nanocomposites), 122, 129, 130
supramolecular (self-assembled structures), 18, 33
Asymmetric, autocatalysis (bioinspired complex systems), 462–463
ATPase (molecular machines), 72, 77, 80–83
ATRP, 327–329, 333, 348
Autocatalysis (bioinspired complex systems), 460–465, 469
asymmetric (bioinspired complex systems), 462–463
Autonomous, agents (bioinspired complex systems), 457, 459, 465
Autonomy (bioinspired complex systems), 457, 459, 465
Aza-cryptand (bioinspired receptors), 378
Bacteria, magnetotatic (biomineralization), 140
Base-pairing (self-assembled structures), 34–35, 37–38
Benzyl ether (bioinspired light-harvesting), 404–407, 412
Bidirectional, catalysis, 173, 205
Binding (molecular machines), 79–84, 89–91, 99, 101, 103
intramolecular (principles of self-assembly), 48, 50, 52, 58
intermolecular (principles of self-assembly), 48, 55–56, 58
Bioderivation, 4
Bioextraction, 4
Biogenic, minerals, 141, 146
Biomes (bioinspired nanocomposites), 121, 127, 128
Bioinspired
adhesive, 251, 253
frameworks (self-assembled structures), 38–39
Biointerface (bioinspired nanocomposites), 127
| Biomimetic bone materials (biomineralization), 147 |
|---------------------------------|------------------|
| carrier (bioinspired nanocomposites), 127 |
| membranes (biomimetic amphiphiles/vessicles), 210–211 |
| scaffold (biomineralization), 148, 151 |
| Biomineralization, 139, 160 |
| Bionanocomposite (bioinspired nanocomposites), 121–128 |
| foam (bioinspired nanocomposites), 122, 124 |
| Bionics, 4–5 |
| Biopolymers (bioinspired nanocomposites), 122–125 |
| Bioutilization, 4 |
| “Bottom-up” self-assembly (photonic devices), 297 |
| self-assembly (self-assembled structures), 17–18, 41 |
| Brownian motion (molecular machines), 82–84, 110 |
| “Butterfly effect”, 456 |
| C3 symmetry (bioinspired receptors), 385 |
| Cadmium selenide (biomineralization), 151–154 |
| sulfide (biomineralization), 151–154 |
| Cage (self-assembled structures), 19–18, 32–33, 36–38 |
| Calcite (biomineralization), 141, 145–146 |
| Calcium carbonate amorphous (biomineralization), 141 biogenic, 141, 144, 147 bioinspired (biomineralization), 141, 145–146, 148, 150 |
| Calcium phosphate (biomineralization), 143, 148–149 |
| Capsule bioinspired nanocomposites, 131–133 self-assembled structures, 19, 21–25, 27 |
| Carbon nanotubes (bioinspired adhesives), 254, 278, 280, 282, 284–285 mesoporous (bioinspired nanocomposites), 130–131 |
| Carbonic anhydrase (self-assembled structures), 28–30 |
| Carrier, biomimetic (bioinspired nanocomposites), 127 |
| Cartilage (bioinspired polymer chemistry), 346–348, 355 |
| Cascade (bioinspired complex systems), 457–459 |
| Cassie-Baxter, equation / model (contact angle), 302 |
| Catalysis (molecular machines), 77, 108, 165–174 |
| heterogeneous (bioinspired catalysis), 165, 168–169, 177, 187, 192–193, 198, 201, 203, 206 |
| Catalysts chromium epoxidation (bioinspired catalysis), 178, 181 |
| cofacial cobalt diporphyrin (bioinspired catalysis), 202–203 |
| Catenane (molecular machines), 74, 76, 103 |
| Cationic, polyene cyclization (bioinspired organic chemistry), 420–422 |
| Cavatand bioinspired receptors, 368 |
| self-assembled structures, 21 |
| Cavity, hydrophobic (bioinspired receptors), 377, 393, 383, 385 |
Clay, polymer nanocomposite (bioinspired nanocomposites), 122–128
Cleft, molecular (self-assembled structures), 19, 21, 23, 25, 27
Click, -chemistry (bioinspired polymer chemistry), 333, 357, 358
Coenzyme B12, 442–443
Cofacial, cobalt diporphyrin catalysts (bioinspired catalysis), 202–203
frequency, 169, 175–177, 187
theory (bioinspired catalysis), 168, 172
Compartments, nano and subcompartments (biomimetic amphiphiles/vessicles), 210, 216–217, 231, 237–238, 239–246
“Comparative anatomy” (bioinspired organic chemistry), 426–427, 429
Complementarity, functional, 184, 186
Complex systems, 455–459, 465, 470
Complex systems science, 455–456
Conjugated, dendrimers, 400–401, 405
Coupled, protein motions, 172, 174
Cover, scale of Morpho butterfly (structural color), 294–295, 301
Critical, solution temperature, lower, 344, 355
Cross-catalytic (bioinspired complex systems), 460–462, 464
DCL, dynamic combinatorial library (bioinspired complex systems), 465–467, 470
Defects (photonic devices), 298–301
Dendrimer
conjugated, 400–401, 405
unsymmetrically branched, 404
Dendron, 409–413
Dendron-rocal, 410, 412–413
Deposition
electrophoretic (photonic devices), 297
layer-by-layer (photonic devices), 299
Diatoms (biomineralization), 139–140, 158
“Dipping”, method (photonic devices), 303
Drug, delivery (molecular machines), 77
Dynamic combinatorial chemistry (bioinspired complex systems), 465
combinatorial library (DCL) (bioinspired complex systems), 465, 467–468
covalent chemistry (self-assembled structures), 22
“kinetic stability” (bioinspired complex systems), 465
mechanical devices (bioinspired catalysis), 173
polymer (bioinspired polymer chemistry), 330–331, 336
Effective molarity (principles of self-assembly), 48, 52, 55, 66, 68
Electrophoretic, deposition (photonic devices), 297
Emergence (bioinspired complex systems), 457, 458, 464
Encapsulation (bioinspired polymer chemistry), 340–341, 357–358
Endiandric, acids, 430
Energy
gradient (bioinspired light-harvesting), 399–400, 403
transfer (bioinspired light-harvesting), 405–408, 412–413
unidirectional transfer (bioinspired light-harvesting), 400, 403–404
Entropy, trap, 172
Enzyme, mimics (self-assembled structures), 28–29
Evolution (bioinspired complex systems), 457–458, 464–465
Feedback (bioinspired complex systems), 457–451
Ferrocenophane, catalysts (bioinspired catalysis), 188–191
Fluorescence, quenching (bioinspired light-harvesting), 406, 412
Fluorescence, -based photonic crystal sensors, 304
Foam, bionanocomposite (bioinspired nanocomposites), 122, 124
Framework, bioinspired (self-assembled structures), 38–39
Freeze-drying (bioinspired nanocomposites), 122, 124–125
FRET (bioinspired light-harvesting), 404, 406
Fuel (molecular machines), 82, 86, 90, 96, 114
Functional complementarity, 184, 186
convergence, 184–186
Funnel, complexes, 368, 370–371, 372–375, 378, 391
Fusion, of membranes, 209, 212, 216–224, 237–238, 245–246
Galanthamine, 424, 426
Gecko, feet, 251–253, 269, 281
Glycocalix, artificial (biomimetic amphiphiles/vessicles), 218
Graphene (bioinspired nanocomposites), 131–132
Ground, -scale of Morpho butterfly (structural color), 294–295, 301
Helicates (principles of self-assembly), 63, 66–67
Helix (bioinspired polymer chemistry), 330–332
Heteroditopic, receptors, 381, 388
Heterogeneous, catalysis (bioinspired catalysis), 165, 168–169, 177, 187, 192–193, 198, 201, 203, 206
Hierarchical structure (bioinspired nanocomposites), 121–122, 124, 129–131
multilevel (bioinspired adhesives), 265
High, aspect ratio (bioinspired adhesives), 251, 253–258, 265, 269, 272, 276, 285
Hill, plot, 52, 66–67
Holographic lithography (photonic devices), 297
Homeostasis (bioinspired complex systems), 461
Homogeneous, catalysis (bioinspired catalysis), 168–169, 177, 187–188, 192–193, 198, 201, 203–204, 206
Hydrogen-bonding interactions (bioinspired receptors), 379–380, 385, 389
evolution (bioinspired light-harvesting), 497–499
Hydrophilic, superhydrophilic (structural color), 301–304
Hydrophobic cavity (bioinspired receptors), 377, 379, 383, 385
superhydrophobic (structural color), 301–304
superhydrophobic, self-cleaning of surfaces (structural color), 304
Hydroxyapatite (biomineralization), 143, 149–150
Imprinting (bioinspired polymer chemistry), 353–354
Indole, alkaloids (bioinspired organic chemistry), 429–430
Induced-fit (bioinspired receptors), 373–374, 387, 389, 391
time of (bioinspired catalysis), 170
Information, theory (bioinspired complex systems), 464
Integration (molecular machines), 75–78, 102, 109, 115
Interactional, algorithm (bioinspired complex systems), 469
Interactions charge dipole (bioinspired receptors), 383
CH-π (bioinspired receptors), 371, 374, 379, 383, 385
H-bonding (bioinspired receptors), 379–380, 385, 389
OH-π (bioinspired receptors), 373–374, 376
Interface (molecular machines), 73, 82, 105, 115–116
Interlocked, molecules, 74
Intermolecular, binding (principles of self-assembly), 48, 50, 52, 58
Intramolecular, binding (principles of self-assembly), 48, 55–56, 58
Inverse, opal (structural color), 300, 303–305, 308–310
Ion-channel, mimics of (self-assembled structures), 32–33
Ionic, liquid (bioinspired nanocomposites), 131–132
Isoprene, rule, 426, 448
Kinesin (molecular machines), 72–73, 77, 79–72, 86, 106, 108, 114
Kinetic, process (bioinspired complex systems), 460
“Knowledge”, term (bioinspired complex systems), 464
“Label-free”, photonic crystal sensors, 304–305, 309
Laser
  - guided, stereolithography (photonic devices), 297
  - induced, polymerization (photonic devices), 299

Layer-by-layer
  assembly (bioinspired nanocomposites), 122, 129–130
  deposition (photonic devices), 299

Levinthal paradox, 459

Library, dynamic combinatorial (DCL)
  (bioinspired complex systems), 465, 467–468

“Lifting”, method (photonic devices), 297–298, 303–304

Lipid
  membrane (bioinspired polymer chemistry), 340
  rafts (bioinspired amphiphiles/vessicles), 220

Liposomes
  biomimetic amphiphiles/vessicles, 210, 212, 216, 217, 220, 222
  self-assembled structures, 30

Lithography (bioinspired adhesives), 254–257, 262–263, 265, 267, 269–270
  holographic (photonic devices), 297

Living, polymerization (bioinspired polymer chemistry), 326–327, 338, 347

Lock-and-key, theory (bioinspired catalysis), 170

Lorenz, Edward, 456

Lower, critical solution temperature, 344, 355

Lubrication (bioinspired polymer chemistry), 324, 346, 348

Lumazine synthase, 20–21

Magnetite, biogenic (biomineralization), 140, 141, 145–146, 148

Magneto-tactic, bacteria (biomineralization), 140

Manganese, porphyrin oxidation catalysts (bioinspired catalysis), 182–183, 185

Mannich, reaction, 462, 463

Maxwell’s Demon, 89, 93

Mechanical
  catalysis, 174, 206
  process (bioinspired complex systems), 460
  mechanosensitive, self-replication (bioinspired complex systems), 457–458, 460–464, 468, 469

Membrane
  adhesion, 209, 212, 216–223, 245–246
  biomimetic, 210–211
  fusion of, 209, 212, 216–224, 237–238, 245–246
  lipid (bioinspired polymer chemistry), 340
  model, 217

Mesoporous
  carbon (bioinspired nanocomposites), 130–131
  silica (bioinspired nanocomposites), 132, 133

Metalloenzymes (bioinspired receptors), 368

Metallosupramolecular, chemistry
  (self-assembled structures), 18, 20, 24–25, 33, 37–38

Michaelis complex (bioinspired catalysis), 168, 176, 192

Micro
  - capsules (bioinspired amphiphiles/vessicles), 213
  - fabrication (bioinspired adhesives), 254
  - machining, “top-down” (structural color), 297
  - patterns (bioinspired adhesives), 255, 267, 282

Molecular
  - (self-assembled structures), 19, 21, 23, 25, 27
  - receptors, 367, 377

- recognition (bioinspired receptors), 374, 379, 389, 392
  - switch (bioinspired receptors), 383, 384

Mollusc, shells, 141, 145–146

Morpho, butterfly, 294–296, 301–303

Motility, 72, 77, 109

Motor (molecular machines), 71–72, 77, 79–80, 82, 83–85, 96, 102–105

Multilevel
  - complex structure (bioinspired adhesives), 263, 266
  - hierarchical structure (bioinspired adhesives), 265

Multipoint, recognition (bioinspired receptors), 374

Multivalency (principles of self-assembly), 55

Myosin (molecular machines), 72–73, 77–83, 86, 90, 106, 114, 116

Nacre, artificial (bioinspired nanocomposites), 121–123, 133

NADH, -mimetics (bioinspired organic chemistry), 441

Nano
  - composite, polymer clay (bioinspired nanocomposites), 122–128
  - hairs, polymer (bioinspired adhesives), 254–251, 265–266, 269, 285
  - reactors (bioinspired amphiphiles/vessicles), 209, 231, 238, 246
Nano (Continued)
sensors (biomimetic amphiphiles/vessicles), 209
tubes, carbon (bioinspired adhesives), 254, 278, 280, 282, 284–285
wires (biomineralization), 151, 153, 154–155, 157

“Near-attack conformers”, 172, 205
Network, supramolecular (bioinspired polymer chemistry), 360, 361
NMP, 327
Noncovalent (molecular machines), 74–75
Nonequilibrium, processes (bioinspired complex systems), 457, 459–460
Nucleophilic, carbine, 441
OH–π interactions (bioinspired receptors), 373–374, 376
Opal (structural color), 299–300, 303–305, 308–312, 316
inverse (structural color), 300, 303–305, 308–310
“Orbital steering”, 172
Organic, template (biomineralization), 145, 151, 153, 159
Organocatalysis (bioinspired organic chemistry), 439
Origin, of life, 460–464

Path-dependence
bioinspired catalysis, 173–174, 181, 185, 186, 190, 201
bioinspired complex systems, 457, 459–460
Pauling, Linus, 170–172, 174, 205
Peptidase (bioinspired receptors), 367, 369, 376
Phenolic, oxidation (bioinspired organic chemistry), 425–426
Phenylacetylene (bioinspired light-harvesting), 403–404
Pho
-chemical (molecular machines), 97, 104–105
-induced electron transfer (bioinspired light-harvesting), 408
-lithography (photonic devices), 299–300
-synthetic mimic (bioinspired light-harvesting), 413
Photonic, crystal sensors
“label-free”, 304–305, 309
fluorescence-based, 304
Polymer
amphiphilic (bioinspired polymer chemistry), 337–340, 344
architecture, 327, 334, 338, 342–343, 349, 358
clay nanocomposite of (bioinspired nanocomposites), 122–128
dynamic, 330–331, 336
nanohairs (bioinspired adhesives), 254–251, 265–266, 269, 285
self-healing (bioinspired polymer chemistry), 355–357, 359, 361
shape-memory, 349, 352
star, 327, 338, 342
Polymerization
laser-induced (photonic devices), 299
living (bioinspired polymer chemistry), 326–327, 338, 347
templated (bioinspired polymer chemistry), 325, 328, 329
Polymersome
bioinspired polymer chemistry, 338–341
biomimetic amphiphiles/vessicles, 210–211, 213–214, 216, 223, 231, 235–236, 246
“Prebiotically plausible conditions” (bioinspired complex systems), 464
Product-induced, solvation (bioinspired complex systems), 461
Purple, bacteria, 397–398
Quantum, dots (biomineralization), 151
Ratchet, 83–85, 90, 92, 102, 104
Reactors, nano (bioinspired amphiphiles/vessicles), 209, 231, 238, 246
Receptors
heteroditopic, 381, 388
molecular, 367, 377
Recognition
molecular (bioinspired receptors), 374, 379, 389, 392
multipoint (bioinspired receptors), 374
of neutral molecule (bioinspired receptors), 368, 372, 378–380, 384–385, 388, 391
Rocaglamides, 427
ROMP, 327, 352, 357
Rotor, 80, 104
Roughness, factor and coefficient (contact angle), 302
Sarcomere (molecular machines), 73, 78–79, 86, 93, 101, 109, 114
Scaffold, biomimetic (biomineralization), 148, 151
Scatchard, plot, 52, 66–67
Sedimentation (photonic devices), 297
Self-
  “bottom-up” (photonic devices), 297
  “bottom-up” (self-assembled structures), 17–18, 41
  -cleaning
  of gecko feet and adhesives, 253, 270, 272, 282, 284
  of superhydrophobic surfaces (structural color), 304
  -healing of polymer (bioinspired polymer chemistry), 355–357, 359, 361
  -replication
  bioinspired complex systems, 457–458, 460–463, 468–469
  mechanosensitive (bioinspired complex systems), 457, 458, 460–464, 468, 469
Sensors
  - nano (biomimetic amphiphiles/vessicles), 209
    photonic, 298, 301, 304, 306, 309, 317–318
  Sepiolite, 124–128
Shape
  -memory polymer, 349, 352
  -control, of vesicles (biomimetic amphiphiles/vessicles), 209, 224
  Signaling, transmembrane, 209, 234, 238, 244, 246
Silica (bioinspired nanocomposites), 121–125, 127, 130, 132–133
  biogenic, 158
  bioinspired, 157
  hollow (biomineralization), 159–160
  mesoporous (bioinspired nanocomposites), 132–133
Silicate (bioinspired nanocomposites), 121–127, 133
Slanted, structure (bioinspired adhesives), 253
Sliding (molecular machines), 72, 77–78, 86–81, 114–115
SNARE, proteins, 222
Spherands (self-assembled structures), 21
Solvation, product-induced (bioinspired complex systems), 461
Star, polymer, 327, 338, 342
Statistical, factors (principles of self-assembly), 48, 50, 55, 61–62, 64–66, 68
  “Statistical proximity”, catalysts, 194, 201–203
Stereolithography, laser-guided (photonic devices), 297
Stetter, reaction, 441
Stimuli-responsive
  -molecular machines, 101–102
    vesicles (bioinspired amphiphiles/vessicles), 209, 224, 235–236
  -strain, theory, 170
Structural
  assignment, biomimetic considerations as an aid to, 447–448
  hierarchy, general discussion of, 7, 9–10
  Structure, slanted (bioinspired adhesives), 253
Subcompartments, nano and (biomimetic amphiphiles/vessicles), 210, 216–217, 231, 237–236
Superhydrophilic (structural color), 301, 304
Superhydrophobic (structural color), 301–304
self-cleaning of surfaces (structural color), 304
Supramolecular (molecular machines), 74, 96, 115
  assemblies (self-assembled structures), 18, 33
  chemistry (principles of self-assembly), 47
  network (bioinspired polymer chemistry), 360–361
  polymer (bioinspired polymer chemistry), 323, 333–337, 359
Sustainability, relating to biomimicry in general, 5, 14
Switch, acid-base, 375–376
  -molecular machines, 74, 85–88, 97–98, 102, 104, 111, 114
  -molecular (bioinspired receptors), 383–384
  -switchable, adhesion, 274
Symmetry
  - breaking
    reactions (bioinspired complex systems), 463, 469
    systems (bioinspired complex systems), 464
    C3 (bioinspired receptors), 385
  number (principles of self-assembly), 48–50, 62, 66, 69
  -external (principles of self-assembly), 49–50
  -internal (principles of self-assembly), 49, 69
Synergistic (bioinspired complex systems), 455
Synthetic, amphiphiles, 209–210, 212
Systems biology, 13
  (bioinspired complex systems), 457–458
Systems chemistry
  (general discussion), 13
  (bioinspired complex systems), 457
Journal of, 457
Templated, polymerization (bioinspired polymer chemistry), 325, 328–329

Theory
  collision (bioinspired catalysis), 168, 172
  induced-fit (bioinspired catalysis), 170
  lock-and-key (bioinspired catalysis), 170
  strain, 170

Thiamine (bioinspired organic chemistry), 439, 441

Time-dependence
  bioinspired catalysis, 175–176, 181, 185, 187, 190
  bioinspired complex systems, 457, 459–460
  “Top-down”, micromachining (structural color), 297

Transition state
  analogue (bioinspired polymer chemistry), 352–353
  complementarity, 170

Transmembrane, signaling, 209, 234, 238, 244, 246

Triosephosphate isomerase (bioinspired catalysis), 173

Tropinone (bioinspired organic chemistry), 422–423

Unidirectional (molecular machines), 77, 80–81, 84–85, 102–108, 114–115

energy transfer (bioinspired light-harvesting), 400, 403–404

Unsymmetrically branched dendrimers, 404

Usnic acid, 423–424

Vesicle
  bioinspired nanocomposites, 126, 129
  bioinspired polymer chemistry, 336, 338–340, 343
  biomimetic amphiphiles/vessicles, 209–216
  shape-control of (biomimetic amphiphiles/vessicles), 209, 224
  stimuli-responsive (biomimetic amphiphiles/vessicles), 209, 224, 235, 236

“Walker”, as in walking machine (molecular machines), 73, 77, 106–108, 114

Waveguide, 298, 299, 300, 301, 318

Wenzel’s equation / model, contact angle (structural color), 301–302

Williams, Bob (bioinspired catalysis), 173–174, 206

Woodward-fission, 430

Youngs equation, contact angle (structural color), 301

Zinc oxide (biomineralization), 153
