1. Introduction: The Concept of Biomimicry and Bioinspiration in Chemistry

*Timothy W. Hanks and Gerhard F. Swiegers*

1.1 What is Biomimicry and Bioinspiration?                              | 1   |
1.2 Why Seek Inspiration from, or Replicate Biology?                   | 3   |
  1.2.1 Biomimicry and Bioinspiration as a Means of Learning from Nature and Reverse-Engineering from Nature | 3   |
  1.2.2 Biomimicry and Bioinspiration as a Test of Our Understanding of Nature | 4   |
  1.2.3 Going Beyond Biomimicry and Bioinspiration                      | 4   |
1.3 Other Monikers: Bioutilization, Bioextraction, Bioderivation, and Bionics | 5   |
1.4 Biomimicry and Sustainability                                       | 5   |
1.5 Biomimicry and Nanostructure                                        | 7   |
1.6 Bioinspiration and Structural Hierarchies                           | 9   |
1.7 Bioinspiration and Self-Assembly                                    | 11  |
1.8 Bioinspiration and Function                                          | 12  |
1.9 Future Perspectives: Drawing Inspiration from the Complex System that is Nature | 13  |
References                                                              | 14  |
2. Bioinspired Self-Assembly I: Self-Assembled Structures
Leonard F. Lindoy, Christopher Richardson, and Jack K. Clegg

2.1 Introduction

2.2 Molecular Clefts, Capsules, and Cages
  2.2.1 Organic Cage Systems
  2.2.2 Metallosupramolecular Cage Systems

2.3 Enzyme Mimics and Models: The Example of Carbonic Anhydrase

2.4 Self-Assembled Liposome-Like Systems

2.5 Ion Channel Mimics

2.6 Base-Pairing Structures

2.7 DNA–RNA Structures

2.8 Bioinspired Frameworks

2.9 Conclusion

References

Gianfranco Ercolani and Luca Schiaffino

3.1 Introduction

3.2 Statistical Factors in Self-Assembly

3.3 Allosteric Cooperativity

3.4 Effective Molarity

3.5 Chelate Cooperativity

3.6 Interannular Cooperativity

3.7 Stability of an Assembly

3.8 Conclusion

References

4. Bioinspired Molecular Machines
Christopher R. Benson, Andrew I. Share, and Amar H. Flood

4.1 Introduction

  4.1.1 Inspirational Antecedents: Biology, Engineering, and Chemistry
4.1.2 Chemical Integration 75
4.1.3 Chapter Overview 77

4.2 Mechanical Effects in Biological Machines 78
4.2.1 Skeletal Muscle’s Structure and Function 78
4.2.2 Kinesin 79
4.2.3 F1-ATP Synthase 80
4.2.4 Common Features of Biological Machines 82
4.2.5 Variation in Biomotors 83
4.2.6 Descriptions and Analogies of Molecular Machines 83

4.3 Theoretical Considerations: Flashing Ratchets 83

4.4 Sliding Machines 86
4.4.1 Linear Machines: Rotaxanes 86
4.4.2 Mechanistic Insights: Ex Situ and In Situ (Maxwell’s Demon) 89
4.4.3 Bioinspiration in Rotaxanes 93
4.4.4 Molecular Muscles as Length Changes 93

4.5 Rotary Motors 102
4.5.1 Interlocked Rotary Machines: Catenanes 103
4.5.2 Unimolecular Rotating Machines 104

4.6 Moving Larger Scale Objects 104

4.7 Walking Machines 106

4.8 Ingenious Machines 109
4.8.1 Molecular Machines Inspired by Macroscopic Ones: Scissors and Elevators 109
4.8.2 Artificial Motility at the Nanoscale 109
4.8.3 Moving Molecules Across Surfaces 110

4.9 Using Synthetic Bioinspired Machines in Biology 111

4.10 Perspective 111
4.10.1 Lessons and Departures from Biological Molecular Machines 114
4.10.2 The Next Steps in Bioinspired Molecular Machinery 115

4.11 Conclusion 116

References 116

5.1 Introduction

5.2 Silicate-Based Bionanocomposites as Bioinspired Systems

5.3 Bionanocomposite Foams

5.4 Biomimetic Membranes

5.4.1 Phospholipid–Clay Membranes

5.4.2 Polysaccharide–Clay Bionanocomposites as Support for Viruses

5.5 Hierarchically Layered Composites

5.5.1 Layer-by-Layer Assembly of Composite-Cell Model

5.5.2 Hierarchically Organized Nanocomposites for Sensor and Drug Delivery

5.6 Conclusion

References

Fabio Nudelman and Nico A. J. M. Sommerdijk

6.1 Inspiration from Nature

6.2 Learning from Nature

6.3 Applying Lessons from Nature: Synthesis of Biomimetic and Bioinspired Materials

6.3.1 Biomimetic Bone Materials

6.3.2 Semiconductors, Nanoparticles, and Nanowires

6.3.3 Biomimetic Strategies for Silica-Based Materials

6.4 Conclusion

References

7. Bioinspired Catalysis

Gerhard F. Swiegers, Jun Chen, and Pawel Wagner

7.1 Introduction
7.2 A General Description of the Operation of Catalysts

7.3 A Brief History of Our Understanding of the Operation of Enzymes

7.3.1 Early Proposals: Lock-and-Key Theory, Strain Theory, and Induced Fit Theory

7.3.2 The Critical Role of Molecular Recognition in Enzymatic Catalysis: Pauling’s Concept of Transition State Complementarity

7.3.3 The Critical Role of Approach Trajectories in Enzymatic Catalysis: Orbital Steering, Near Attack Conformers, the Proximity Effect, and Entropy Traps

7.3.4 The Critical Role of Conformational Motion in Enzymatic Catalysis: Coupled Protein Motions

7.3.5 Enzymes as Molecular Machines: Dynamic Mechanical Devices and the Entatic State

7.3.6 The Fundamental Origin of Machine-like Actions: Mechanical Catalysis

7.4 Representative Studies of Bioinspired/Biomimetic Catalysts

7.4.1 Important General Characteristics of Enzymes as a Class of Catalyst

7.4.2 Bioinspired/Biomimetic Catalysts that Illustrate the Critical Importance of Reactant Approach Trajectories

7.4.3 Bioinspired/Biomimetic Catalysts that Demonstrate the Importance and Limitations of Molecular Recognition

7.4.4 Bioinspired/Biomimetic Catalysts that Operate Like a Mechanical Device

7.5 The Relationship Between Enzymatic Catalysis and Nonbiological Homogeneous and Heterogeneous Catalysis

7.6 Selected High-Performance NonBiological Catalysts that Exploit Nature’s Catalytic Principles

7.6.1 Adapting Model Species of Enzymes to Facilitate Machine-like Catalysis

7.6.2 Statistical Proximity Catalysts
