abrasions
  ageing of injury, 252
definition, 244, 245
adult sexual assault, 95–118
definition, 126
drug-facilitated sexual assault (DFSA), 116
examination, 116–17
delays in, 103–4, 112–13, 137, 138
ethical issues, 124–5, 129, 133, 140–9
gender of examiner, 101–2, 151–2
incidence, 132
injury interpretation, 255–8
male victims, 100, 152
nature of injuries, 102–15
anal penetration, 115
assailant’s erectile impotence, 102, 257
black vs white women, 113–14
case studies, 104–11
consensual vs nonconsensual intercourse, 102–3, 124, 131–2, 150–1, 258
forced digital penetration, 114
foreign object penetration, 115
menopausal status, 113, 114
non-genital injury vs genital injury, 112, 113
strangers vs known assailants, 115
virginity status, 114, 257
settings and characteristics, 96–101
treatment and management, 117–18
ageing of injury, 254
bone trauma, 82–3, 83, 252, 253
bruising, 248–50, 252
anal injury
  adult sexual assault, 115
  child sexual abuse, 261
  anthrax, 21, 23–4, 28–31, 37, 38
  assessment see injury interpretation
  avian influenza, 18
  aviation disasters, 309–21
  autopsy, 311–14
  examination of equipment/clothing, 312
  external examination, 313
  imaging, 312–13
  internal examination, 313
  microscopic examination, 314
  photography, 312
  specimen collection, 314
  circumstances surrounding death, 317–20
  establishing the cause of death, 314–17
  forensic pathology report, 320–1

  Bacillus anthracis, 37
Bayesian approach, DNA matches, 207–8
bias, 3, 13, 243, 266–7
biological agents, 17–42
aetiology, 26–7, 26
assembling evidence, 26–34
case studies, 24, 27–33
dispersal, 22
investigation processes, 22–6, 23
microbiological evidence, 25
presenting features, 21, 22–5
specific infections
  Bacillus anthracis, 37
  Botulinum toxin (Botox), 42
  Brucella melitensis, 37–8
  Coxiella burnetii (Q fever), 39–40
  Francisella tularensis, 38–9
INDEX

ricin, 41–2
staphylococcal enterotoxin, 42
variola virus (smallpox), 41
Venezuelan equine encephalitis (VEE), 40
viral haemorrhagic fever (VHF), 40
Yersinia pestis, 39

threat assessments, 18–20

biotoxins, 21
bite marks, 291–306
animal bites, 291–3, 292
examination (in the dead), 296–9, 297, 298, 300
examination (of the living), 300–1
examination (of the suspect), 301–3
in foodstuffs, 295–6
injuries imitating, 294
methods of analysis, 303–6, 304, 305, 306
photographing, 165, 174–5
tissue indentations, 299

bone healing, 82–3, 83, 252, 253
bone trauma
healing process, 252
medical imitations of injuries, 256

bone trauma in children, 63–92
association with child abuse, 80–2
birth trauma, 85–6, 86
blood tests, 67–8, 84–5
bone healing, 82–3, 83, 253
confidence level, 91–2
diagnosis summary, 92
evaluation, 64–8
examples, 65
forensic vs medical diagnosis, 91
fracture mechanisms, 79–80, 80
fragile bones, 83–5, 84
injury confused with normal variants, 87–8

magnetic resonance imaging (MRI), 75–8, 78
medical imitations of injuries, 256
metaphyseal lesion, 68
nuclear medicine imaging, 74–5, 76, 77
conflicting with X-ray result, 89–90
injury confused with normal variants, 88, 89, 89–90
principles, 64
skull fractures, 81
time of injury, 87
ultrasound imaging, 73–4, 74, 87

X-ray examination, 68–73
computed tomography (CT), 72–3, 73
coned views, 65, 67, 70
conflicting with bone scan result, 90
image capture and display, 78–9
injury confused with normal variants, 87, 88
live vs dead patient, 69
normal variants confused with injury, 88–9

positioning of bone, 70, 71
radiograph densities, 71, 72
radiographic skeletal survey, 65–7, 66, 67
repeat examination, 91

Botulinum toxin (Botox), 42
Brucella melitensis, 37–8

bruising
ageing of injury, 248–50, 252
definition, 244
medical imitations of injuries, 255, 256
photography, 181

burns
medical imitations of injuries, 256
photography, 175–6, 186, 187, 245–7, 246

child sexual abuse
anal injury, 261
ethical issues, 141–3, 148–9
injury interpretation, 258–62
see also paediatric hymen

Clostridium botulinum, 42
contamination of evidence, 23, 195–6, 214
court appearance, 6–10

Coxiella burnetii (Q fever), 39–40
cross-discipline reports, 263–5
cross-examination, 10–14

DNA analysis, 193–231
contamination, 195–6, 214
in criminal investigation, 229–31
databases, 229–30
degraded DNA, 217, 218
DNA amplification, 199–200
DNA collection and storage, 194–6
DNA extraction, 196
DNA genotyping, 201–2
DNA quantification, 196–8
Plexor assay, 197, 198
TaqMan assay, 197, 198
DNA separation and detection, 200–1
low-template DNA, 217–21, 219
mitochondrial DNA, 223–8, 225
mixtures of DNA, 213–17
polymerase chain reaction (PCR), 194, 199–200
‘random man not excluded’ (RMNE) approach, 215–16
short tandem repeats (STRs), 194, 200–1
artefact features, 211–15
assessing STR profiles, 208–13, 209
categories, 201–2
commercial STR kits, 202–3, 204
standard loci sets, 202–3, 204
X chromosome STRs, 221–2
Y chromosome STRs, 222–3, 223
single nucleotide polymorphisms (SNPs), 226–8, 227
statistical evaluation of a match, 203–8
Bayesian approach, 207–8
likelihood ratio (LR), 206–7
‘product rule’, 203
tissue identification, 228–9

Ebola virus, 20
erectile dysfunction, 102, 257
ethical issues, 124–5, 129, 133, 140–9
ethnicity
adult sexual assault, 110–11, 113–14
DNA profiles, 203, 231
evidence, rules of, 3–5
expert evidence, 3–14
avoiding errors, 267–8
opinions, 266–7
expert reports, 3
expert witnesses, 1–2
court appearance, 6–7
cross-examination, 10–14
giving evidence, 3–5, 7–10
pre-trial preparation, 5–6
explosion injury, 312, 315
forensic microbiology, 25
Francisella tularensis, 38–9
gender of examiner, 101–2, 151–2
genetic fingerprinting see DNA analysis
genital injuries
medical imitations of injuries, 255, 256
photography see photo-colposcopy
see also paediatric hymen
gunshot wounds, 277, 311
healing process
bone healing, 82–3, 83, 252, 253
paediatric hymen, 54–6, 55
see also ageing of injury
health practitioners
gender issues, 101–2, 151–2
training issues, 258, 260, 267
human rights, 146–7
incised wounds
ageing of injury, 251, 252
definition, 244, 245
infectious disease
global threats, 18
see also biological agents
injury ageing see ageing of injury
injury interpretation, 239–68
adult sexual assault, 255–8
aviation disasters, 314–17
bias, 3, 13, 243, 266–7
bite marks, 294
bone trauma in children, 80–2, 87–90
child sexual abuse, 258–62
ersors in logic, 12
force of injury, 253–5
injury visualization, 241–2
limitations and bias, 243
medical imitations of injuries, 255, 256, 257
opinions, 266–7
paediatric hymen, 58–9, 259–62
photographic images, 245–8
previous history, 264, 267
self-inflicted injury, 264, 278–80, 286–8, 287
injury types, 244–5, 244
injury visualization, 241–2
Koch–Henle postulates, 26
laceration
ageing of injury, 252
definition, 244, 245
legal evidence, 3–5, 7–10
photo-colposcopy, 132, 133–4, 139–40, 145, 151
see also expert evidence
likelihood ratio (LR), 206–7
medical imitations of injuries, 255, 256, 257
microbial forensics, 25
microorganisms see biological agents
paediatric hymen, 43–59
normal anatomy, 44–9, 44, 45, 46, 47, 53
sexual trauma, 48, 49–54, 50, 51, 52
healing process, 54–6, 55
indicative of abuse, 260–1
test interpretation, 58–9, 259–62
test reliability, 56–8

pandemic influenza, 18
partisanship, 13
pathology tests, 265
patient confidentiality, 147, 157–8
patient consent, 134–8, 135, 136, 157–8
patient privacy, 146–7, 230–1, 242
photo-colposcopy, 124–53
benefits, 138–9
children, 141–3, 148–9
ethical issues, 124–5, 129, 133, 140–9
historical perspective, 126–8
as legal evidence, 132, 133–4, 139–40, 145, 151
patient consent, 134–8, 135, 136
photography, 159–91
audit trail, 189–90
aviation disasters, 312
colour control/reference, 166
cross-polarized, 167–70, 168, 169, 170, 171, 172, 173
equipment, 161–2
forensic scales, 164, 165, 298–9
illumination, 163–4, 166, 166
imaging file format, 188–9
infrared, 181–4, 183, 184, 184
injury interpretation, 245–8
