List of Contributors  xiii
Preface  xix

1  Introduction  1
Christine Seymour and Gintaras V. Reklaitis
1.1 Quality by Design Overview  1
1.2 Pharmaceutical Industry  2
1.3 Quality by Design Details  3
1.4 Chapter Summaries  4
References  7

2  An Overview of the Role of Mathematical Models in Implementation of Quality by Design Paradigm for Drug Development and Manufacture  9
Sharmista Chatterjee, Christine M. V. Moore, and Moheb M. Nasr
2.1 Introduction  9
2.2 Overview of Models  9
2.3 Role of Models in QbD  12
2.3.1 CQA  13
2.3.2 Risk Assessment  13
2.3.3 Design Space  14
2.3.4 Control Strategy  19
2.4 General Scientific Considerations for Model Development  20
2.4.1 Models for Process Characterization  21
2.4.2 Models for Supporting Analytical Procedures  22
2.4.3 Models for Process Monitoring and Control  22
2.5 Scientific Considerations for Maintenance of Models  22
2.6 Conclusion  23
References  23
3 Role of Automatic Process Control in Quality by Design  25
3.1 Introduction  25
3.2 Design of Robust Control Strategies  31
3.3 Some Example Applications of Automatic Feedback Control  35
3.4 The Role of Kinetics Modeling  40
3.5 Ideas for a Deeper QbD Approach  42
3.6 Summary  44
Acknowledgments  46
References  47

4 Predictive Distributions for Constructing the ICH Q8 Design Space  55
John J. Peterson, Mohammad Yahyah, Kevin Lief, and Neil Hodnett
4.1 Introduction  55
4.2 Overlapping Means Approach  56
4.3 Predictive Distribution Approach  59
4.4 Examples  61
4.4.1 A Mechanistic Model Example  62
4.4.2 An Empirical Model Example  64
4.5 Summary and Discussion  68
Acknowledgment  69
References  69

5 Design of Novel Integrated Pharmaceutical Processes:
A Model-Based Approach  71
Alicia Román-Martínez, John M. Woodley, and Rafiqul Gani
5.1 Introduction  71
5.2 Problem Description  73
5.2.1 Mathematical Formulation  73
5.2.2 Solution Approach  75
5.3 Methodology  76
5.3.1 Superstructure  77
5.3.2 Model Development  78
5.3.3 Decomposition Strategy  79
5.4 Application: Case Study  80
5.4.1 Stage 1: Problem Definition  81
5.4.2 Stage 2: Data/Information Collection/Analysis  81
5.4.3 Stage 3: Superstructure, Model Development, and Decomposition Strategy  82

8 A Strategy for Tablet Active Film Coating Formulation Development Using a Content Uniformity Model and Quality by Design Principles 193

Wei Chen, Jennifer Wang, Divyakant Desai, Shih-Ying Chang, San Kiang, and Olav Lyngberg

8.1 Introduction 193
8.2 Content Uniformity Model Development 197
8.2.1 Principles of the Model 198
8.2.2 Total Residence Time and Fractional Residence Time 199
8.2.3 The RSD Model Derivation 201
8.2.4 Model Parameters and Their Measurements 204
8.2.4.1 Tablet Velocity 205
8.2.4.2 Tablet Number Density 207
8.2.4.3 Spray Zone Width 208
8.3 RSD Model Validation and Sensitivity Analysis for Model Parameters 212
8.3.1 Model Validation 213
8.3.2 Effect of Spray Zone Width on Content Uniformity 215
8.3.3 Effect of Tablet Velocity on Content Uniformity 216
8.3.4 Effect of Tablet Size on Content Uniformity 217
8.3.5 Effect of Pan Load on Content Uniformity 217
8.3.6 Effect of Coating Time on Content Uniformity 218
8.4 Model-Based Design Space Establishment for Tablet Active Film Coating 219

10.2.2 Goals 263
10.2.3 Material and Methods 264
10.2.3.1 Application of QbD Concepts 264
10.2.3.2 Model and Numerical Simulation 267
10.2.3.3 Process Characterization Experimental Design 268
10.2.4 Results and Discussion 272
10.2.5 Conclusion 276
10.3 Characterization of a Tablet Coating Process via CFD Simulations 276
10.3.1 Introduction 276
10.3.2 Background 278
10.3.3 Methods 280
10.3.3.1 Model and Numerical Simulation 281
10.3.3.2 Simulation Design and Characterization 284
10.3.3.3 Potentially Critical Input Parameters 286
10.3.4 Results and Discussion 287
10.3.4.1 Time Development of Mean Thickness and RSD 288
10.3.4.2 Knowledge Space 290
10.3.5 Summary 294
10.4 Overall Conclusions 294

11 Design Space Definition: A Case Study—Small Molecule Lyophilized Parenteral 301
Linas Mockus, David LeBlond, Gintaras V. Reklaitis, Prabir K. Basu, Tim Paul, Nathan Pease, Steven L. Nail, and Mansoor A. Khan

11.1 Introduction 301
11.2 Case Study: Bayesian Treatment of Design Space for a Lyophilized Small Molecule Parenteral 302
11.2.1 Arrhenius Accelerated Stability Model with Covariates for a Pseudo-Zero-Order Degradation Process 302
11.2.2 Design Space Definition 307
11.3 Results 307
11.4 Conclusions 311
Appendix 11.A Implementation Using WinBUGS and R 311

11.A.1 WinBUGS Model 312
11.A.2 Data Used for Analysis 312
11.A.3 Calling WinBUGS from R 314
11.A.4 Calculating the Predictive Posterior Probability of Meeting Shelf Life 315
Notation 316
Acknowledgments 317
References 317
12 Enhanced Process Design and Control of a Multiple-Input Multiple-Output Granulation Process 319
   Rohit Ramachandran
   12.1 Introduction and Objectives 319
   12.2 Population Balance Model 320
   12.2.1 Compartmentalized Population Balance Model 322
   12.3 Simulation and Controllability Studies 323
   12.4 Identification of Existing “Optimal” Control-Loop Pairings 327
      12.4.1 Discarding $n_1$ 328
      12.4.2 Discarding $n_2$ 328
      12.4.3 Discarding $n_3$ 328
      12.4.4 Discarding $n_4$ 329
      12.4.5 Discussion 329
   12.5 Novel Process Design 330
      12.5.1 Identification of Kernels 331
      12.5.2 Proposed Design and Control Configuration 331
   12.6 Conclusions 335
   References 336

13 A Perspective on the Implementation of QbD on Manufacturing through Control System: The Fluidized Bed Dryer Control with MPC and NIR Spectroscopy Case 339
   Leonel Quiñones, Luis Obregón, and Carlos Velázquez
   13.1 Introduction 339
   13.2 Theory 340
      13.2.1 Fluidized Bed Dryers (FBDs) 340
      13.2.2 Process Control 341
         13.2.2.1 Proportional Integral Derivative (PID) Control 342
         13.2.2.2 Model Predictive Control (MPC) 342
   13.3 Materials and Methods 344
      13.3.1 Materials 344
      13.3.2 Equipment 344
      13.3.3 MPC Implementation 346
   13.4 Results and Discussion 348
      13.4.1 Process Model 348
      13.4.2 Control Performance with Nominal Process Parameters 349
      13.4.3 Control Performance with Non-nominal Model Parameters 352
   13.5 Continuous Fluidized Bed Drying 355
   13.6 Control Limitations 356
   13.7 Conclusions 357
   Acknowledgment 357

14 Knowledge Management in Support of QbD 361
G. Joglekar, Gintaras V. Reklaitis, A. Giridhar, and Linas Mockus
14.1 Introduction 361
14.2 Knowledge Hierarchy 363
14.3 Review of Existing Software 364
14.4 Workflow-Based Framework 365
14.4.1 Scientific Workflows 366
14.4.2 Business Workflows 367
14.4.3 Comprehensive Workflow-Based Knowledge Management System 368
14.5 Drug Substance Case Study 368
14.5.1 Process Description 368
14.5.2 Workflow-Based Representation of the Semagacestat Study 370
14.5.3 Using Workflows 373
14.6 Design Space 374
14.6.1 Design Space Example 374
14.6.2 Systematic Approach to Determining Design Space 375
14.6.3 Workflow-Based Approach to Design Space Development 375
14.6.4 Drug Product Case Study 378
14.7 Technical Challenges 382
14.7.1 Human–Machine Interaction Design 382
14.7.2 Extraction of Operational Data 383
14.7.3 Collection of Tacit Knowledge 383
14.8 Conclusions 384
