Part I APPROACHES

1 The Toolkit 3
   Alan G. Wilson

Part II ESTIMATING MISSING DATA: BI-PROPORTIONAL FITTING AND PRINCIPAL COMPONENTS ANALYSIS

2 The Effects of Economic and Labour Market Inequalities on Interregional Migration in Europe 9
   Adam Dennett
   2.1 Introduction 9
   2.2 The Approach 12
   2.3 Data 12
   2.4 Preliminary Analysis 13
   2.5 Multinomial Logit Regression Analysis 15
   2.6 Discussion 22
   2.7 Conclusions 24
   References 25

3 Test of Bi-Proportional Fitting Procedure Applied to International Trade 26
   Simone Caschili and Alan G. Wilson
   3.1 Introduction 26
   3.2 Model 27
   3.3 Notes of Implementation 28
4 Estimating Services Flows

Robert G. Levy

4.1 Introduction

4.2 Estimation Via Iterative Proportional Fitting
  4.2.1 The Method
  4.2.2 With All Initial Values Equal
  4.2.3 Equivalence to Entropy Maximisation
  4.2.4 Estimation with Some Known Flows
  4.2.5 Drawbacks to Estimating Services Flows with IPF

4.3 Estimating Services Flows Using Commodities Flows
  4.3.1 The Gravity Model
  4.3.2 Splitting Up Value Added

4.4 A Comparison of The Methods
  4.4.1 Unbalanced Row and Column Margins
  4.4.2 Iterative Proportional Fitting
  4.4.3 Gravity Model
  4.4.4 Gravity Model Followed by IPF

4.5 Results
  4.5.1 Selecting a Representative Sector
  4.5.2 Estimated in-Sample Flows
  4.5.3 Estimated Export Totals

4.6 Conclusion

References

Thomas P. Oléron Evans and Robert G. Levy

5.1 Motivation and Aims

5.2 Obstacles to The Estimation of National Input–Output Tables

5.3 Vector Representation of Input–Output Tables

5.4 Method
  5.4.1 Concept
  5.4.2 Estimation Procedure
  5.4.3 Cross-Validation

5.5 In-Sample Assessment of The Estimates
  5.5.1 Summary Statistics
  5.5.2 Visual Comparison

5.6 Out-of-Sample Discussion of The Estimates
  5.6.1 Final Demand Closeness
  5.6.2 Technical Coefficient Clustering

5.7 Conclusion

Part III  DYNAMICS IN ACCOUNT-BASED MODELS

6  A Dynamic Global Trade Model With Four Sectors: Food, Natural Resources, Manufactured Goods and Labour  
Hannah M. Fry, Alan G. Wilson and Frank T. Smith
6.1 Introduction 71
6.2 Definition of Variables for System Description 73
6.3 The Pricing and Trade Flows Algorithm 73
6.4 Initial Setup 75
6.5 The Algorithm to Determine Farming Trade Flows 77
  6.5.1 The Accounts for the Farming Industry 79
  6.5.2 A Final Point on The Farming Flows 79
6.6 The Algorithm to Determine The Natural Resources Trade Flows 80
  6.6.1 The Accounts for The Natural Resources Sector 80
6.7 The Algorithm to Determine Manufacturing Trade Flows 81
  6.7.1 The Accounts for The Manufacturing Industry 82
6.8 The Dynamics 83
6.9 Experimental Results 84
  6.9.1 Concluding Comments 88
References 90

7  Global Dynamical Input–Output Modelling  
Anthony P. Korte and Alan G. Wilson
7.1 Towards a Fully Dynamic Inter-country Input–Output Model 91
7.2 National Accounts 92
  7.2.1 Definitions 92
  7.2.2 The Production Account 94
  7.2.3 The Commodity Markets Account 94
  7.2.4 The Household Account 94
  7.2.5 The Capital Markets Account 94
  7.2.6 The Rest of the World (RoW) Account 94
  7.2.7 The Government Account 95
  7.2.8 The Net Worth of an Economy and Revaluations 95
  7.2.9 Overview of the National Accounts 95
  7.2.10 Closing the Model: Making Final Demand Endogenous 96
7.3 The Dynamical International Model 97
  7.3.1 Supply and Demand 97
  7.3.2 The National Accounts Revisited 99
7.4 Investment: Modelling Production Capacity: The Capacity Planning Model 100
  7.4.1 The Multi-region, Multi-sector Capacity Planning Model 100
7.5 Modelling Production Capacity: The Investment Growth Approach 103
  7.5.1 Multi-region, multi-sector Investment Growth Models with Reversibility 103
  7.5.2 One-country, One-sector Investment Growth Model with Reversibility 104
  7.5.3 Two-country, Two-sector Investment Growth Model with Reversibility 106
7.5.4 A Multi-region, Multi-sector, Investment Growth Model without Reversibility 108
7.5.5 A Multi-region, Multi-sector, Investment Growth Model without Reversibility, with Variable Trade Coefficients 111
7.5.6 Dynamical Final Demand 114
7.5.7 Labour 115
7.5.8 The Price Model 118
7.6 Conclusions 121

Appendix 123
A.1 Proof of Linearity of the Static Model and the Equivalence of Two Modelling Approaches 123

Part IV SPACE–TIME STATISTICAL ANALYSIS

8 Space–Time Analysis of Point Patterns in Crime and Security Events 127
Toby P. Davies, Shane D. Johnson, Alex Braithwaite and Elio Marchione
8.1 Introduction 127
8.1.1 Clustering 127
8.1.2 Clustering of Urban Crime 129
8.1.3 The Knox Test 130
8.2 Application in Novel Areas 132
8.2.1 Maritime Piracy 132
8.2.2 Space–Time Clustering of Piracy 134
8.2.3 Insurgency and Counterinsurgency in Iraq 136
8.3 Motif Analysis 138
8.3.1 Introduction 138
8.3.2 Event Networks 140
8.3.3 Network Motifs 140
8.3.4 Statistical Analysis 141
8.3.5 Random Network Generation 142
8.3.6 Results 143
8.4 Discussion 147
References 148

Part V REAL-TIME RESPONSE MODELS

9 The London Riots –1: Epidemiology, Spatial Interaction and Probability of Arrest 153
Toby P. Davies, Hannah M. Fry, Alan G. Wilson and Steven R. Bishop
9.1 Introduction 153
Contents

9.2 Characteristics of Disorder 156
9.3 The Model 158
  9.3.1 Outline 158
  9.3.2 General Concepts 158
  9.3.3 Riot Participation 159
  9.3.4 Spatial Assignment 160
  9.3.5 Interaction between Police and Rioters 162
9.4 Demonstration Case 162
9.5 Concluding Comments 166
  References 166
  Appendix 168
A.1 Note on Methods: Data 168
A.2 Numerical Simulations 169

10 The London Riots –2: A Discrete Choice Model 170
  Peter Baudains, Alex Braithwaite and Shane D. Johnson
  10.1 Introduction 170
  10.2 Model Setup 170
  10.3 Modelling the Observed Utility 172
  10.4 Results 176
  10.5 Simulating the 2011 London Riots: Towards a Policy Tool 181
  10.6 Modelling Optimal Police Deployment 187
  References 190

Part VI THE MATHEMATICS OF WAR

11 Richardson Models with Space 195
  Peter Baudains
  11.1 Introduction 195
  11.2 The Richardson Model 196
  11.3 Empirical Applications of Richardson’s Model 202
  11.4 A Global Arms Race Model 204
  11.5 Relationship to a Spatial Conflict Model 206
  11.6 An Empirical Application 207
    11.6.1 Two Models of Global Military Expenditure 207
    11.6.2 The Alliance Measure $C_{ij}$ 208
    11.6.3 A Spatial Richardson Model of Global Military Expenditure 210
    11.6.4 Results 211
  11.7 Conclusion 212

Part VIII  DIFFUSION MODELS

14  Urban Agglomeration Through the Diffusion of Investment Impacts 269
   Minette D’Lima, Francesca R. Medda and Alan G. Wilson

   14.1 Introduction 269
   14.2 The Model 270
   14.3 Mathematical Analysis for Agglomeration Conditions 272
      14.3.1 Introduction 272
      14.3.2 Case: $r < c$ 274
      14.3.3 Case: $r \geq c$ 274
   14.4 Simulation Results 275
   14.5 Conclusions 279
   References 279

Part IX  GAME THEORY

15  From Colonel Blotto to Field Marshall Blotto 283
   Peter Baudains, Toby P. Davies, Hannah M. Fry and Alan G. Wilson

   15.1 Introduction 283
   15.2 The Colonel Blotto Game and its Extensions 285
   15.3 Incorporating a Spatial Interaction Model of Threat 286
   15.4 Two-front Battles 288
   15.5 Comparing Even and Uneven Allocations in a Scenario with Five Fronts 289
   15.6 Conclusion 292
   References 292

16  Modelling Strategic Interactions in a Global Context 293
   Janina Beiser

   16.1 Introduction 293
   16.2 The Theoretical Model 294
   16.3 Strategic Estimation 295
   16.4 International Sources of Uncertainty in the Context of Repression and Rebellion 297
      16.4.1 International Sources of Uncertainty Related to Actions 297
   16.5 International Sources of Uncertainty Related to Outcomes 299
   16.6 Empirical Analysis 301
      16.6.1 Data and Operationalisation 301
   16.7 Results 303
   16.8 Additional Considerations Related to International Uncertainty 304
Part X NETWORKS

18 Network Evolution: A Transport Example
Francesca Pagliara, Alan G. Wilson and Valerio de Martinis

18.1 Introduction 343
18.2 A Hierarchical Retail Structure Model as a Building Block 344
18.3 Extensions to Transport Networks 345
18.4 An Application in Transport Planning 347
18.5 A Case Study: Bagnoli in Naples 350
18.6 Conclusion 360
References 361
19  The Structure of Global Transportation Networks 363
Sean Hanna, Joan Serras and Tasos Varoudis
19.1 Introduction 363
19.2 Method 364
19.3 Analysis of the European Map 366
19.4 Towards a Global Spatial Economic Map: Economic Analysis by Country 368
19.5 An East-west Divide and Natural Economic Behaviour 373
19.6 Conclusion 376
References 377

20  Trade Networks and Optimal Consumption 378
Robert J. Downes and Robert G. Levy
20.1 Introduction 378
20.2 The Global Economic Model 379
  20.2.1 Introduction 379
  20.2.2 Data Sources 380
  20.2.3 Model Overview 380
20.3 Perturbing Final Demand Vectors 380
  20.3.1 Introduction 380
  20.3.2 Perturbation Process 382
20.4 Analysis 384
  20.4.1 Introduction 384
  20.4.2 A Directed Network Representation 384
  20.4.3 A Weighted Directed Network Representation 389
  20.4.4 Communities in the Network of Improvements 390
20.5 Conclusions 393
