SUBJECT INDEX

3

A

additive adjustment, see centering
additive and multiplicative modeling, 128
additive modeling
two-way, 111

agriculture, xviii. 13, 19, 23
AMMI model, 135
biadditive model, 135
double centering, 134
genotype by environment interaction, 111, 135
multivariate, 129
preprocessing, 129
missing data, 123
multi-way factorial data, 36
non-metric multi-way data, 32, 146
peanut example, 5, 6
plant adaptation example, 6
plant breeding example, 5, 111, 471
plant breeding
missing data, 145
phenotypic correlation, 129
preprocessing factorial designs, 129
preprocessing, 140
research questions, 18
three-mode mixture method of clustering, 4, 2
three-way profile data, 403
triadditive modeling, 139
variety trials, 173

air pollution, multi-way modeling, 480
algorithms, see TUCKALS, Tucker, Parasal, etc.

algorithms
definition, 79
reasons for discussing, 77
all-components plot, see plotting
ALSOMP, 42, 74, 96, 321
alternating least-squares, 21, 80
analysis of dependence, 32, 283
analysis of interdependence, 32, 283
analytical chemistry, 13, 17, 22
application FunPack2 model, 64
chromatography time-shift example, 475
analytical chemistry (cont'd)
  component uniqueness, 61, 322
  explicit Parafac models, 61, 344
  fluorescence spectroscopy, 472
  four-way data, 472
  multiway block models, 24
  nonnegative components, 96
  Parafac2 applications, 63
  problems with split-half procedures, 184
  spectroscopy data example, 472
  spectroscopy protein example, 472
  applications, standard format, six aspect ratio, 280, 497
  association models, 42, 434
  anti-regressor model, 380, 385
  external variables, 380–381
  structural part, 380–381
  transition matrix, 381
  anti-regressor process, 379, 383, 402
  core array, 384
  estimation parameters, 390, 383, 391
  first-order, 380, 384, 391–392
  homogeneity, 384
  fast-fourier transformation analysis, 391
  latent covariance matrix, 384
  simulation, 383
  parameter estimation, 386
  second-order, 384, 392
  simplex, 380
  examples, 391
  stability, 384, 386, 392
  state-like, 384
  stationarity, 384, 386
  three-mode PCA, 570
  Simulation, 370
  state-like, 384
  average subject profile, 130, 271, 272, 321, 332, 348

B
  B-splines
    compression, 169
    smoothing, 71, 377
  bad leverage points, 205
  basic data relation (causal, historical), 480
  basic form
    component models, 215
    Parafac model, 60, 215
    PCA, 47
    Tucker models, 215, 225, 325
    Tucker2 model, 66
    Tucker3 model, 65, 140
  basic structure of a matrix, see singular value decomposition
  batch processes
    monitoring, 52
    between-model selection, 173
    deviance plot, 182
    examples, 162, 197, 199, 202, 206
    model hierarchy, 186
    examples, 205
    multiway scree plot, 182
  biadditive model, 135–136
  additive plus multiplicative model, 135
  completely multiplicative model, 135
  degrees of freedom, 137
  factorial design, 135
  hypothesis testing, 137
  rotatable variant, 136
  bibliography
    annotated, 21
    web-based, 21
  bilinear model, 19, 217
  biplot, 332, 492
    aspect ratios, 497
    biplot axis, 495
    calibration, 494
    data markers, 495
    description, 492, 494
    Euclidean distance, 493
    geometry, 499
    graphical, 495
    inner product, 497
    interpretation, 497
    least-squares approximation, 493
    low-dimensional approximation, 493
    principal component analysis, 499
    principal coordinate scaling, 493, 496–497, 498
    row markers, 494
    symmetric scaling, 493, 496–497, 499
    total variability, 493
    variability accounted for, 494
  bipolar scales, 8
  antonym, 9
  centering, 131, 360
  double centering, 131
  multivariate multiway factorial data, 131
  three-way rating scales, 360
  trilinear modeling, 139
  blind beamforming, 22
  blindfolded nonlinear
    model for iterative algorithms, 80–81
  Boolean algebra, 42, 480
  bootstraps, 233, 512, 222, 348, 449, 478
  bootstraps, 188
  dimensionality selection, 170
  examples, 190, 267
  fit measures, 188
multiway analysis, 188
nonstochastic data, 147
optimizing congruences, 334
sample size, 176
sampling residuals, 235
stability estimation, 18, 32, 176, 188, 362
standard deviations, 233
target rotation, 234

C
CANDID, 95, 203
canonical correlation analysis, 401
canonical decomposition, CANDECOMP
also PARAFAC
individual differences scaling, 22
linear constraints, CANDID
seven-way algorithm, 24, 487
Carroll, J. Douglas, 23
centering, see also preprocessing
centering
additive adjustment, 111
additive modeling, 111
appropriate, 112, 119, 142
average subject's profile, 131, 258
blockwise modeling, 135
bipolar scales, 122, 131, 360
center components, 120, 321
correction errors, 120
correlations of, 125
corresponding models, 129
degree of freedom, 190
degrees of freedom, 190
double, 119, 131, 134, 142
definition, 112
designs of, 111, 120
designs, 111, 115, 118, 190, 203, 314
factor, 113, 177, 179, 121, 127–128, 130, 142, 128, 142, 222, 224, 288, 321, 386, 392
effect sizes, 180
effects of, 111, 120
effects, 111, 115, 118, 190, 203, 314
factor, 113, 177, 179, 121, 127–128, 130, 142, 128, 142, 222, 224, 288, 321, 386, 392
advantages, 150
appropriate, 118, 131
combining centerings, 121
corresponding arguments, 113
double, 119
effects, 111, 115, 118, 190, 203, 314
models, 113, 314, 364, 395
model-based arguments, 112
model equivalence, 118
moving centroid, 121
removing offsets, 118, 119
triple, 119
growth data, 115
incompatible normalization, 127
individual differences, 132
interval scales, 117
missing data, 153, 159
model comparison, 121, 142, 204
nonstochastic data, 147, 360
necessary in PCA, 114
nonmetric multidim, 113, 122
normalization combined, 127
offsets, 117
rotation, 118
single overall, 122
PCA, 116, 118, 121, 196
proceeds normalization, 127
proposals, 119
rating scales, 160, 194, 196, 353
relationships, 119
removing offsets, 321
robust alternatives, 113, 123, 298
scaling arrangement, 453
skewness, 114, 347
three-way examples, 386
three-way analysis of variance models, 137
three-way factorial design, 119
three-way rating scale data, 131
triple, 119
two-way analysis of variance, 154
uncentered components, 120
two-way examples, 451
shape structure, 208
chemistry, vvii, 13
batch water example, 184
chromatography example, 190
commercial applications, 13
desalination of water example, 473
early reference three-mode analyses, 24
enzymatic browning example, 23, 473
llabour flow example, 184
improving core consistency, 186
metal desalination example, 73
missing data, 148, 154
multivariate data, 470
multivariate analysis, 17
robust PCA, 300
sugar solution example, 5
theoretical multivariate models, 212
unimodality constraints, 72
chemistry, 12–15, 24, 69
Child's Report of Parent Behavior Inventory (CRPBI), 313, 315, 317, 320
child studies
attachment example, 465, 424
cooping example, 153, 344, 346, 354, 355
child studies (cont'd)
  education example, 4–6
  intelligence example, 6, 59
  learning to read example, 377
  parental behavior example, 313
  perceived-reality example, 36
  physical growth example, 394
  playing with peers example, 434–455
  problem behavior—CBCL, 356
  showing respect example, 73
  three-way questions, 5

Cholesky include study
  content rating scales, 8
  individual differences, 10
  judgment technical aspects, 9
  model selection, 191
  prelude space, 9
  research questions, 8
  sequence space, 6

chromatography
  scattering and normalization, 100
  missing data, 154, 159, 168
  multiple regression, 161
  multivariate, 975
  retention data, 160
  retention rate patterns, 160–167
  single dependent variable, 160

circle of fifths, 11

correlations multiway papers, 13

correlation matrix, 301
  frontal slice core array, 351
  grouping individuals, 404
  k-means, 404
  algorithms, 34
  examples, 406
  starting solutions, 417
  overview techniques, 23
  similarity measures, 404
  simultaneous with component analysis, 404
  three-way profile data, 404, 412

covariance
  definition, 26
  combination-mode, 15
  component
  meaning in PARAFAC, 212, 212
  component analysis, see multivariate analysis
  component analysis, see principal component analysis
  component constraints, see model constraints
  component interpretation, 310, 315, 320, 360
  component matrices
  comparison across models, 220
  comparison coefficients within a mode, 220
  compensatory scaling core array, 219
  comparability of centered and uncentered, 121
  content-based scaling, 220
  examples, 479, 486, 160, 316, 328, 367–368
  first-order component scores, 223
  first-order loading matrix, 222
  functional constraints, 400
  interpretation core array, 219, 220
  latent predictors, 222
  loading interpretation, 219
  metric for plotting, 220
  rotational freedom, 218
  nonsingular transformations, 218
  normalized components, 219–220
  normalized coordinate scaling, 219
  oblique, 218
  orthogonal, 222–223
  orthogonality, 218
  principal coordinate scaling, 219–220
  regression coefficients, 221
  rotations, 226
  scaling of components, 218
  second-order component scores, 223
  second-order loadings, 223
  sign reversals, 219
  standard coordinates, 219
  standardized regression coefficients, 221–222
  structure component scores, 221
  structured loading matrix, 224
  theoretical constraints, 219
  unit-length components, 210
  unit-norm square scaling, 219–220
  component uniqueness, 30
  component versus factor models, xvii
  components analysis, see principal component analysis
  compression, see PARAFAC algorithm, compression
  computer-intensive procedures, 187
  computer programs

COMSTAT algorithm
Tucker3 model, 21
configurations
sets of, 33, 39
correspondence coefficient, 196, 313, 326
between-model comparison, 196
definition, 196
examples, 196, 323–324, 328
rule of thumb, 196, 328
conjugate gradient, 96
consensus molecular alignment, 40
constrained model, see model constraints
CORCONDIA, see core consistency
core array
anti-diagonal, 246
computation, 98
constraints, 69
diagonal and anti-diagonal slices, 247
diagonality criteria, 248
examples, 253
different variants, 64
examples, 338–340, 367, 369, 390
explained variability of components, 66
matricized, 55
maximal simplicity, 246–247, 255
maximum number of zeroes, 246, 254
miniature data box, 228
Murakami core, 249, 254–255
elements, 255
ParaFrac model, 65
ParaFrac model applied to core array, 256
simplicity, 245–247
per-component plot, 271
slice diagonality, 246, 248
superscriptarity, 60, 65, 185, 245–248, 323
examples, 328–329, 362
orthogonality, 66
theoretical simplicity, 254–255
three-mode models, 64
three-way simplicity, 56, 65, 179
formal proof, 66, 179
Tucker2 model, 64
Tucker3 model, 64
two-mode
simplicity, 245
two-way, 49
types, 246
core consistency, 185
core consistency plot, 186
dimensionality selection ParaFrac, 185
dimensionality selection problem, 185
examples, 205–206, 329–330, 481
core consistency
dimensionality selection ParaFrac, 185
dimensionality selection problem, 185
improving core consistency, 186
normalized, 185
core covariance matrix, see latent covariance matrix
correspondence analysis, see three-way correspondence analysis
correspondence analysis, see two-way correspondence analysis
covariance matrices
sets of, 31, 39, 47
ParaFrac model, 62
covariances vs correlations in multiway, 37, 124–125
covariance chart, 24, 469–470
cross-section regression, 148–149
cross-fitting iterative OLS, 150
covariance chart, 24, 469–470
cross-section regression, 148–149
cross-fitting iterative OLS, 150
local convergence, 149–150
local convergence, 149–150
ParaFrac model, 154
robustness, 300
successive dyadic fitting, 149
two-way generalization, 154
triadic algorithm, 154
triadic algorithm, 154
weighted, 149
cross-sectional data
versus repeated measures data, 31
cross-validation, 32, 341
CubaBach, 488
D
data set
academic suitability data, 463–464
acoustic particle data, 480, 482–485
blue crab data, 409–411, 414–415, 417, 419, 422, 424, 432
chair-style data, 262–263
Chopin prelude data, 8–11, 192–195, 197, 199–207
chromatography data, xxi, 159–160, 162, 164–168
facies data, 296
data set (cont'd) 231
  girls' growth curve data, 115, 268-259, 261
  364-366, 268, 270-272, 274-280, 375,
  384-398, 400-401
  happiness data, xx, 444-447, 456-451,
  453-454
  hospital data, 375, 387-393, 394
  hospital data, 466, 467
  kuize data, 174
  multiple personality data, xx, 350, 361,
  362-371, 471, 476-479
  NICHD data, 368-173
  parental behavior data, 313, 316-319, 323-324,
  325-328, 330-332, 334-335, 337-339,
  341, 343
  peer study data, 454-457
  Strange Situation data, 425, 432
  sugar data, 144, 267, 269
  university staff data, 461-462
  world of woman data, 267
