Tables, Figures, and Exhibits  xvi
Preface  xx
The Author  xxv

1 Introduction to Measurement  1
   Role of Measurement in Health Education and Health Behavior Research  1
   Brief History of Psychosocial Measurement  3
   Conceptualization of Measurement  6
   Reasons for Measuring Concepts  8
Scales of Measurement  9
   • Nominal Scale  9
   • Ordinal Scale  11
   • Interval Scale  12
   • Ratio Scale  14
   • Levels of Measurement and Statistics  15
Major Concepts of Measurement: Reliability and Validity  16
   • Reliability  16
   • Validity  17
Summary  17
2 Types of Measures 18

Self-Report 19
• Interviews 19
• Questionnaires 20
• Journals and Diaries 22
• Response Scales 23
• Scaling Methods 24
  Visual Analog Scale 24
  Thurstone Scale 26
  Likert Scale 28
  Guttman Scale 29
  Semantic Differential Rating Scale 30
• Indexes 31

Observations 33

Biobehavioral Measures 33

Electronic Measures 34

Summary 35

3 Measurement Error 36

Definition 37

Classification of Measurement Error 38
• Random Error 38
• Systematic Error 39

Measurement Error Factors 40
• Respondent Factors 40
  Response Sets 42
    Social Desirability 42
    Acquiescence and Nay-Saying 44
    End Aversion (Central Tendency) 44
    Positive Skew 45
    Halo 46
    Recall 46
  • Instrument Factors 48
  Strategies to Reduce Errors on Self-Report Questionnaires 50
  Strategies to Reduce Errors During Interviews 51
• Situational Factors 51
  Measurement Rules 53

Summary 53
4 Survey Development 54
Definition 55
Basic Principles of Survey Construction 55
• Purpose 55
• Objectives 56
• Respondents 59
General Principles of Item Writing 59
• The Do’s of Item Writing 60
• The Don’ts of Item Writing 68
Survey Format 70
Survey Administration 72
Summary 74

5 Knowledge Tests 75
Test Construction 76
• State the Purpose of the Test 76
• State the Test Objectives 78
• Review Content 79
• Develop a Table of Test Specifications 79
• Domain-Sampling Model 80
Types of Items 84
• Multiple-Choice Items 85
• True/False Items 90
Item Analysis 92
• Item-Objective Congruency 92
  Average Congruency Percentage 98
• Difficulty Index 98
• Item Discrimination Index 101
Summary 101

6 Theory and Measurement 103
Linking Measurement to Theory-Based Health Practice and Research 104
• Gibbs’s Model 106
• Theoretical and Operational Definitions 109
Conceptualization Issues in Scale Development 110
• Survey Versus Scale 110
• Single-Item Versus Multiple-Item Scales 111
• Concept Selection 113
Concept Analysis 114
• Identify Definitions and Uses of the Concept 114
• Identify Critical Attributes of the Concept 116
• Identify Dimensions of the Concept 117
• Identify Similar and Different Concepts 117
• Identify Antecedents and Consequences of the Concept 118
• Write a Model Case 118
• State the Variables 119

Summary 119

7 Item Writing and Scaling 121

Item Development Process 122
• State the Theoretical Definition 123
• Identify Dimensions of the Concept 123
• Create a Content-Domain by Concept-Dimension Matrix 123
• Decide How Many Items to Include for Each Matrix Cell 124
• Write Items for Each Content-Domain by Concept-Dimension Cell 126

Literature Review 126
Qualitative Interviews 126
Other Instruments 127

• Write Rules for Scale Scoring and Administration 128

Summated Rating Scales 128
• Types of Response Options 128
• Number of Response Options 130
• Odd or Even Number of Categories 131
• Meanings of Response Option Adjectives or Adverbs 132
• Use of Adjectives, Adverbs, or Numbers, or Combinations Thereof 132
• Positively and Negatively Worded Items 133
• Scoring 133

Summary 135

8 Review of Statistical Concepts 136

Basic Statistical Concepts 137
• Frequency Distribution 137
  Measures of Central Tendency 139
  Measures of Dispersion 139
• SPSS Commands 140
  Recode Negatively Worded Items Using SPSS 144
  Compute Total Scale Scores Using SPSS 145
Contents

Review of Correlation 146
• Interpretation of the Correlation Coefficient 150
• Correlation Matrix 152
• Correlation Issues 152
  Causality 152
  Sample Size 153
  Group Differences 154
  Restriction of Range 154
• Variance 154
• Reporting Results of Correlation Analysis 156

Analysis of Variance 157
• Definition and Use 157
• SPSS Commands for a One-Way ANOVA 158
• Interpreting a One-Way ANOVA 158

Summary 162

9 Fundamentals of Reliability 163
Classical Test Theory 165
• Observed, True, and Error Scores 165
• Assumptions and Characteristics 167

Reliability Coefficient 170
• Estimate of Reliability 172
• Calculation of Variance Due to the True Score 173
• Calculation of the Reliability Index 174

Summary 174

10 Reliability Assessment and Item Analysis 176
Methods of Reliability Assessment 177
• Equivalence 177
• Stability 178
• Internal Consistency 181
  Split-Half 181
  Coefficient Alpha 184
  Cronbach’s Alpha 186
  Kuder-Richardson Formula 20 189

Factors Associated with Coefficient Alpha 191
• Test Length and Interitem Correlation 191
• Test Adjustments to Increase Alpha 191
• Standards of Reliability 193
Item Analysis 193
Intrarater and Interrater Reliability 199
Intraclass Correlation Coefficient 203
Standard Error of Measurement 205
Generalizability Theory 206
Summary 210

11 Validity 211
Test Content 214
• Procedures 215
• Content Validity Index 218
• Face Validity 219
Response Processes 220
• Procedures 221
  Think Aloud 221
  Verbal Probe 222
• Evaluation 222
Relationships to Other Variables 224
• Criterion Validity 225
• Construct Validity 229
• Multitrait-Multimethod Matrix 233
• Validity Issues 235
Summary 236

12 Factor Analysis 237
Exploratory Factor Analysis 238
• Definition 238
• Conceptual Basis 241
• How Factor Analysis Works 244
Steps in Factor Analysis 244
• Basic Requirements for FA 246
• Initial Assessment 247
  Evaluation of the Matrix 248
  Evaluation of the Determinant 250
  Test for an Identity Matrix 251
• Tests of Sampling Adequacy 252
• Selection of the Type of Factor Analysis 253
  Initial Extraction 255
  Eigenvalues 256
Contents

Communality 257
Number of Factors 261
- Rotation of Factors 263
- Interpretation of Factors 267
Confirmatory Factor Analysis 273
Summary 275

13 Item Response Theory 276
Disadvantages of Classical Test Theory 277
Item Response Theory Basics 278
Polytomous Models 285
Technical Issues 288
Summary 289

References 290

Index 297
TABLES, FIGURES, AND EXHIBITS

Tables

2.1 The Rosenberg Self-Esteem Scale.
5.1 Sample Table of Test Specifications.
5.2 Sample Table of Test Specifications Using Individual Learning Objectives.
5.3 Table of Test Specifications for an HIV Knowledge Test.
5.4 Item-Objective Congruency Evaluation Conducted by Three Content Experts for Ten Items.
5.5 Example of Item Analysis for a True/False HIV Knowledge Test.
5.6 P Values for Answer Choices on Three Multiple-Choice Items on an HIV Knowledge Test.
7.1 Example of a 1 × 1 Matrix.
7.2 Example of an 8 × 1 Matrix.
7.3 Matrix for Outcome Expectations for Healthy Eating.
7.4 Items on the Outcome Expectations for Healthy Eating Scale.
8.1 Frequency and Percentage of Participants’ Benefit Ratings (N = 100).
8.2 Calculation of Variance Using Benefit Ratings of 100 Participants.
8.3 SPSS Printout of Measures of Central Tendency and Dispersion.
8.4 Calculation of the Correlation Coefficient for the Association Between Exercise and Oxygen Consumption.
8.5 Correlation Matrix Showing Relationships Among Benefit Ratings, Hours of Exercise, VO2, and Weight Change.
8.6 SPSS Printout Using the One-Way ANOVA Descriptive Command.
8.7 SPSS Printout for Test of Homogeneity of Variances.
8.8 SPSS Printout of ANOVA Summary Table.
8.9 SPSS Printout Showing Comparisons Among the Groups.
9.1 Josh’s Observed, True, and Error Scores for Ten Attempts on a Research Methods Quiz.
9.2 Descriptive Statistics for True Scores, Parallel Test Scores, and Error Scores for a Sample of Students.
9.3 Correlations Among True Scores, Parallel Test Scores, and Error Scores for a Sample of Students.
10.1 SPSS Printout Showing the Results of Parallel Test Reliability Assessment.
10.2 SPSS Printout Showing the Results of Test-Retest Reliability Assessment.
10.3 Correlation Matrix for the Maternal Involvement Scale.
10.4 Variance-Covariance Matrix.
10.5 Variance Covariance for the Maternal Involvement Scale.
10.6 Values of Cronbach’s Alpha for Various Combinations of Different Number of Items and Different Average Interitem Correlations.
10.7 Ratings of Two Observers on Ten Videotape Segments.
10.8 Cross-Tabulations for Agreement Among Observers.
10.9 Amount of Variance and Percentage of Total Variance for the Social Support Scale.
11.1 New and Old Terminology for Validity.
11.2 Hypothetical Scores of Participants on a Readiness Scale and Percentage of Doses Taken Correctly.
11.3 Correlation Coefficients for Relationships Between Self-Efficacy and Outcome Expectations, Social Support, Difficult Life Circumstances, and Age.
11.4 SPSS Printout of ANOVA for Hypothetical Data Comparing Differences Between Two Groups on a Self-Efficacy Scale.
11.5 Expected Pattern of Relationships for a Multitrait-Multimethod Matrix.
12.1 Categories of Physical Activities Formed by Conceptual Similarities.
12.2 Correlation Matrix for Eight Items on the SE Scale.
12.3 SPSS Printout with Descriptive Statistics for the Twelve-Item SE Scale.
12.4 SPSS Printout of the Correlation Matrix for the Twelve-Item SE Scale.
12.5 SPSS Printout of the KMO and Bartlett’s Test of Sphericity for the Twelve-Item SE Scale.
12.6 SPSS Printout of the Anti-Image Correlation Matrix for the Twelve-Item SE Scale.
12.7 SPSS Printout of the Initial Solution for the Twelve-Item SE Scale.
12.8 SPSS Printout for the Unrotated Factor for the Twelve-Item SE Scale.
12.9 SPSS Printout of the Communalities Table for the Twelve-Item SE Scale.
12.10 SPSS Printout of Goodness-of-Fit Test for the Twelve-Item SE Scale.
12.11 SPSS Printout of the Unrotated Factor Matrix for Eight Items on the SE Scale.
12.12 SPSS Printout of the Rotated Factor (Pattern) Matrix for Eight Items on the SE Scale.
12.13 SPSS Printout of the Rotated Factor Matrices and Factor Correlation Matrix for the Twelve-Item SE Scale.
12.14 Factor Correlation Matrix.
12.15 SPSS Printout of the Rotated Pattern Matrix for the Twelve-Item SE Scale Using the Sort and Suppression Commands Under Options.
13.1 Items for Two Hypothetical Tests.
13.2 Equations for the One-, Two-, and Three-Parameter Logistic IRT Models.
13.3 CCC for a Three-Category Graded Response Model Where $a = 1.5$, $b_1 = -1.0$, and $b_2 = 1.0$.
13.4 ICRFs for a Three-Category Item Where $a = 1.5$, $b_1 = -1$, and $b_2 = 1$.

**Figures**

1.1 Conceptualization of the Measurement Process.
1.2 Interval Scale for Weights of Newborns Using the Mean Weight as the Origin.
1.3 Schema for Levels of Measurement.
2.1 Response Format from a Worksheet Completed by a First-Grade Student.
2.2 Wong-Baker Faces Pain Rating Scale.
2.3 General Form of a Visual Analog Scale.
3.1 Response Options.
4.1 Steps in Survey Development.
5.1 Steps in the Development of a Knowledge Test.
5.2 Diagram of the Domain-Sampling Method.
6.1 Steps in the Scale Development Process.
6.2 The Measurement Process in Health Behavior Research.
6.3 Example of Relational Statements in Social Cognitive Theory.
6.5 Steps in Conducting a Concept Analysis.
7.1 Steps in the Item-Writing Process.
8.1 Graphic Representation of Benefit Ratings for a Sample of 100 Participants.
8.2 SPSS Data Editor Screen.
8.3 SPSS Dialog Box for Frequency.
8.4 Relationship Between Number of Hours Exercised and VO\textsubscript{2} for 100 Participants.
8.5 Relationship Between Number of Hours Exercised and Change in Weight for 100 Participants.
8.6 Range and Sign of Correlation Coefficients.
8.7 Possible Causal Relationships Between Two Variables.
8.8 Relationship Between Number of Hours Exercised and VO\textsubscript{2} for Those Who Exercise Fewer Than 5 Hours per Week.
8.9 Venn Diagram Showing Variance for Two Separate Variables.
8.10 Venn Diagram Showing the Shared Variance Between Two Variables.
9.1 Histogram of Josh’s Scores on 100 Repeated Attempts on a Research Methods Test.
9.2 Histogram of Josh’s Scores on 100 Repeated Attempts on a Health Behavior Theory Test.
9.3 Relationship Among Observed-, True-, and Error-Score Variance.
10.1 Diagram of the Components in a G Study.
10.2 Venn Diagram for $P \times O \times I$ Design.
11.1 SPSS Printout of Scatterplot Showing the Relationship Between Readiness Scores and Medication Adherence for a Hypothetical Set of Data.
11.2 Hypothesized Relationships Among Variables Within Social Cognitive Theory.
11.3 Hypothesized Relationships Among Variables to Be Examined.
12.1 Structure of the Outcome Expectations for Healthy Eating Scale.
12.2 Reconfiguration of a Correlation Matrix into a Factor (Structure) Matrix for Eight Items on the SE Scale.
12.3 Steps in Factor Analysis.
12.4 SPSS Dialog Box for Descriptives Command.
12.5 SPSS Dialog Box for Extraction Commands.
12.6 SPSS Printout of the Scree Plot for the Twelve-Item SE Scale.
12.7 Scatterplot of Factor Loadings for the Unrotated Factor Matrix for the Eight-Item SE Scale.
12.8 Scatterplot of Factor Loadings for the Rotated Factor (Pattern) Matrix for the Eight-Item SE Scale.
12.9 SPSS Dialog Box for Rotation Commands.
12.10 SPSS-Generated Scatterplot of Rotated Factor Matrix for the Twelve-Item SE Scale.
12.11 SPSS Dialog Box for the Options Commands.
12.13 Latent Variable Model for SEM Analysis.
13.1 Example of an Item Characteristic Curve.
13.2 Theoretical ICCs for One-, Two-, and Three-Parameter Logistic IRT Models for Four Items with Given Parameter Values.
Exhibits

1.1 Transformation of an Ordinal Variable by Addition and by Multiplication.
1.2 Conversion of Temperature from Fahrenheit to Celsius Degrees.
2.1 Examples of Response Formats.
2.2 Example of a Thurstone Scale, Using Hypothetical Items and Weights for an Epilepsy Attitude Scale.
2.3 Examples of Items for an Index of Socioeconomic Status.
3.1 Example of a Knowledge Test Demonstrating Instrument-Related Errors.
4.1 Example of Survey Items on Hand-Hygiene Practices.
5.1 Materials for Review of Knowledge Items by Content Experts
6.1 Sample Survey and Scale Items, Demonstrating Differences.
7.1 Examples of Response Options.
10.1 SPSS Printout Showing the Results of a Split-Half Reliability Assessment for the Maternal Involvement Scale.
10.2 SPSS Printout for the Alpha Coefficient for the Maternal Involvement Scale.
10.3 SPSS Printout of the Results of a KR20 for an HIV Knowledge Test.
10.4 SPSS Printout for Use in Item Analysis for the Maternal Involvement Scale.
10.5 SPSS Printout with the Results of Kappa
10.6 SPSS Printout of an Intraclass Correlation Coefficient.
11.1 Example of Materials for Conducting a Content Validity Assessment.
11.2 Example of Verbal Probes Used in an Assessment.
12.1 Items on the Epilepsy Stigma Scale.
13.1 Equations for the One-, Two-, and Three-Parameter Logistic IRT Models.
