in food and feed, 47

INDEX
ion ratios, recommended maximum tolerances, 47, 48
mass spectrometric detectors, 47, 48
multiresidue methods, 48
objectives, 47
sample extracts, extracted ion chromatograms, 47
tolerances, 47–8
water, chemical analysis and monitoring, 48
SBSE see stir-bar sorptive extraction (SBSE)
scan rate, LC–MS analysis, 147–8
SDME see single-drop microextraction (SDME)
selected reaction monitoring (SRM), 132
selectivity, LC–MS analysis, 149–50
single stage quadrupole (Q), 238
single mass analyzer
single-drop microextraction (SDME), 251
solid-phase microextraction (SPME), 65, 66–70, 71–2
single stage quadrupole (Q), 238
solid-phase extraction (SPE), 63
extracted compounds, 62, 62
extraction and cleanup procedures, 61–3
graphitized carbon black (GCB), 63
hydrophilic-lipophilic balance (HLB) reversed-phase sorbents, 62
method, 55–60
molecularly imprinted polymers (MIPs), 62
multiwalled carbon nanotubes (MWCNs), 63
pesticide isolation from water, 61
primary-secondary amine (PSA), 63
principal, 62
solid sorbents, 62
transformation products (TPs), 232
variations, 61
solid-phase microextraction (SPME), 65, 66–70, 71
solvent based de-emulsification DLLME (SD–DLLME), 72
solvent-terminated dispersive liquid–liquid microextraction (STDLLME), 72, 73
solvent vs. matrix-matched calibration, 164, 164–5, 165
sorbent-based microextraction techniques solid-phase microextraction (SPME), 65, 66–70, 71
stir-bar sorptive extraction (SBSE), 66–70, 71
SPE see solid-phase extraction (SPE)
SPME see solid-phase microextraction (SPME)
State Management Plans (SMPs), 46
stir-bar sorptive extraction (SBSE), 66–70, 71
styrene-divinylbenzene (SDB), 232
substance classes, matrix effects, 176
substances of very high concern (SVHCs), 17
sugar conjugates, 9–10
sulfate conjugates, 10
supercritical fluid extraction (SFE) advantages, 79, 80
cleaned up, 80
pesticides determination, 79
principle, 78
total analysis time, 79
tandem MS techniques linear two dimensional ion trap (LIT), 242–3
mass analyzers, 242, 242
multiple reaction monitoring (MRM) mode, 241
product ion (PI) scan, 241–2
transformation products (TPs), identification
quadrupole ion trap mass spectrometer (IT-MS), 244–9
triple quadrupole-mass spectrometer (QqQ-MS), 243–4
TDC see time-to-digital correction (TDC)
time-of-flight (TOF), 8
configurations, 102
dynamic range enhancement (DRE), 103
with exact mass, 102–3
high-speed TOF mass analyzer, 103
mass analyzer
accurate mass measurements, 138
configuration, 138, 139
detectors types, 139
in different configurations, 139
field-free drift zone, 138
full-scan conditions and resolution, 138
instrument, 138
ion sources, 138
mass errors, 139–40
matrix-matched standard calibration, 140
in pesticide multiresidue analysis, 139
reflectron, 138
reflectron arrangement, 139
UHPLC–TOF-MS method, 140
time-to-digital correction (TDC), 147
TOF see time-of-flight (TOF)
tolerances
FSIS Residue Testing, 42
in imported and domestic food, 40–41
for ion ratios, 47, 48, 49, 49
US Food Regulations, 42–3
total ion chromatogram (TIC), 219
TPs see transformation products (TPs)
transformation products (TPs)
advanced oxidation processes (AOPs), 231–2, 233–5
analytical methodologies, 232
degradation product identification, 232, 236
environmental matrices, 231
HR mass spectrometers (HRMS), 255–6
hyphenated MS techniques, 237–241
identification levels, 236, 237
liquid-liquid extraction (LLE), 232
mass fragment and identification points, 237
mass spectrometry (MS) methods, 232
mesotrione, 258
in monitoring programs, 28–9
MS fragmentation, 236
pesticide metabolites and see metabolites and transformation products (TPs)
solid-phase extraction (SPE), 232
transformation products (TPs) (cont’d)
structure elucidation, 1
styrene-divinylbenzene (SDB), 232
sulcotrione, 258
tandem MS see tandem MS techniques
UPLC–ESI–MS–LTQ-Orbitrap chromatographic profiles, 257
traveling wave-based radio-frequencyonly stacked ring ion guide (TWIG), 147
triple quadrupole mass analyzer characteristics, 132–3
collision-induced dissociation (CID), 133
electrospray ionization (ESI), 132–4
hydrophilic interaction liquid chromatography (HILIC) column, 134
instruments, 133
limitation, 135
limits of detection (LODs), 134–5
neutral loss scan, 133
in olive oil and olives, 134
pesticide residues, determination, 134
precursor ion scan, 133
product ion scan, 133
quadrupole (Q), 133
QuEChERS sample preparation, 134
selected reaction monitoring (SRM), 133
specific transitions, pesticide identification, 134, 134
turbulent flow chromatography (TLX), 134
ultrahigh-performance liquid chromatography (UHPLC), 135
Turbo Ion Spray, 168, 168, 169
Turbo V Source, 168, 168
TWIG see traveling wave-based radio-frequencyonly stacked ring ion guide (TWIG)
UAE see ultrasound-assisted extraction (UAE)
ultrahigh-performance liquid chromatography (UHPLC), 10, 114, 116–17
ultrasound-assisted emulsification–microextraction (USAEME), 72
ultrasound-assisted extraction (UAE), 73, 80
USAEME see ultrasound-assisted emulsification–microextraction (USAEME)
