    pathway a, 425
    pathway b, 425
    pathway c, 426
    pathway d, 426
    pathway e, 426
    pathway f, 426
    pathway g, 426–7
  environmental determinants, 422–3
  epidemic polyarthritis outbreaks, 420–421
  social determinants, 423
  transmission cycles, 422
rotavirus
  characteristics, 497
  classification, 497–8
  clinical symptoms and pathogenesis, 498
  epidemiology, 498
  genomic diversity, 499
  genotypes, 500–501
  vaccines, 499–500
Saint Louis encephalitis, 95
saliva-assisted transmission (SAT)
  anti-vector vaccine, 610–611
    in nymphs, 610
  non-viremic transmission, 609
  Salp15, 610
  Thogoto virus, 609
  viral SAT factors, identification and characterization, 611–12
severe acute respiratory syndrome (SARS)
  outbreak, 364–5
  spillover viral transmission, 346
  severe acute respiratory syndrome CoV (SARS-CoV), 394
  see also coronavirus (CoV)
Sindbis virus (SINV), 158
smallpox virus see also Orthopoxvirus
  clinical features, 378
  transmission, 378
  variola major and variola minor, 378
spillover viral transmission
anthropogenic factors
  agricultural practices and deforestation, 346
  cross species transmission, 344
  dengue virus, 346–7
  geographical distribution, 344
  henipavirus, 346
  host switching, 345
influenza virus, 346
  pasturage practices, 345–6
  pathogenic infection stages, 344
  Rift Valley fever, 347
  SARS, 346
  viral entry mechanisms, 344
  intermediate hosts and species barriers, 349
  viral factors
    mutation, 348–9
    reassortment, 347
    recombination, 347–8
surveillance networks
  as analytical tools, 223–5
  challenges, 228–9
  definition and scope, 216–17
  early warning surveillance systems, 220–222
  electronic and web-based information platforms, 222–3
  emerging infectious disease (EID) events, 215
  global surveillance networks emergence, 218
  guidelines and protocols improvement, 226–7
  health situation rooms, 227–8
  IHR-2005, 218
  influenza surveillance, 219–20
  innovative approaches, 222
  International Sanitary Regulations, 214
  key functions and uses, 217–18
  proxy and compiled web-based information use, 225
  public health surveillance, 215–16
  public–private partnerships, 226
  real-time and near real-time information, 223
  volunteer sentinel physicians, 226
Thogoto virus (THOV), 591
tick-borne encephalitis (TBE)
  backward transmission, 578
  classification, 577
  cofeeding transmission, 577
  competent vertebrate hosts, 576
  epidemiology, 578–80
  in European countries, 578
  in mountains of Czech Republic, 578
  modes of human infection, 577
  subtypes, 576
  transmission mechanism, 577
  viral zoonoses and human behavior, 95
  virus isolation, 576
tick innate immunity, 607–8, 611
tick-transmitted viruses
  ALKV, 582–3
  family bunyaviridae
tick-transmitted viruses (cont’d)

Bhanja bunyavirus, 589–90
Crimean–Congo hemorrhagic fever virus, 584–8
Henan fever bunyavirus, 588–9
Keterah bunyavirus, 590
family orthomyxoviridae
Dhori virus, 592
Thogoto virus, 591
family reoviridae
Colorado tick fever virus, 590
Kemerovo virus, 590–91
Tribeč virus, 591
flavivirus, TBE, 575–6
KFDV, 582–3
loping ill virus
course of, 581
geographical distribution, 579
isolation, 581
symptoms, 581
occasionally causing disease in humans, 592, 593
Omsk hemorrhagic fever virus, 582
Powassan virus
gеographical distribution, 581
hosts, 581
isolation, 581
symptoms, 581
vectors, 581
tick-borne encephalitis
backward transmission, 578
classification, 577
cofeeding transmission, 577
competent vertebrate hosts, 576
epidemiology, 578–80
in European countries, 578
in mountains of Czech Republic, 578
modes of human infection, 577
subtypes, 576
transmission mechanism, 577
virus isolation, 576
ticks in nature, 575
tick–virus interface
argasid variety, 604
climate change impact, 612
endosymbionts and coinfections role, 611
ixodid variety, 604
saliva-assisted transmission
anti-vector vaccine, 610–611
in nymphs, 610
non-viremic transmission, 609
Salp15, 610
Thogoto virus, 609
tick cell lines generation, 611
tick innate immunity, 611
ticks, classification, 604
viral persistence, tick vectors, 612
viral SAT factors, identification and characterization, 611–12
viruses within tick vector coinfections, 608
endosymbionts, 608
extrinsic incubation period, 609
RNA interference, 608
tick immunity, 607–8
tick vector on viruses, 605–7
virus infection on ticks, 605
Wolbachia infection, Ae. aegypti mosquitoes, 609
Toscana virus (TOSV)
classification, 536–7
clinical picture, 537–8
ecology, 539–41
geographical distribution, 537–8
laboratory diagnosis
molecular detection, 541
prevention, 542
serological diagnosis, 541–2
transmission, 542
treatment, 542
virus isolation, 541
phylogenetic studies, 538–9
virus properties, 536–7
Tribeč virus (TRBV), 591
urbanization, viral zoonotic transfer, 81–2
Usutu virus (USUV)
classification, 542–3
ecology
host, 544
incidental host, 544
vectors, 543–4
laboratory diagnosis
direct methods, 545–6
indirect methods, 546
pathology
birds, 544–5
humans, 545
phylogenetic analysis
detections, 547
genome fragments, 547
homology percentage, 546
nucleotide sequence percentage, 548
recurrence, 547
retrospective analysis, environmental factors, 548 sequence analysis, 548 prevention, 549–50 properties, 542–3 surveillance, 549–50 treatment, 549–50

Vaccinia virus, 378 vector-borne viral diseases (VVD) annual worldwide impact, 22 arboviruses episystem, 23 hosts, 22 mosquito-borne (see mosquito-borne arbovirus episystems) emerging and reemerging chikungunya fever, 11–12 dengue fever, 6–8 OHF and CCHF, 13–14 Rift Valley fever, 12–13 viral encephalitis, 9–10 yellow fever, 9 epidemiology description, 4 factors affecting transmission, 5 interactions with influencing factors, 6 temporal–spatial distribution, 4–5 virus types and vectors, 4, 5 nonzoonotic VVD invasion, 14 prevention and control, 14–16 vector, defined, 4 Venezuelan equine encephalitis virus (VEEV) arboviral host range, 62–3 arbovirus host alternations, 310 viral zoonoses and human behavior, 96 viral emergence arbovirus host alternations bottleneck events, 310 characteristics, 307 evolution, 311 flavivirus studies, 310 in vivo studies, 308 multiple hosts, 309 recombination, 310–311 socioeconomic development, 312–13 trade-off hypothesis, 308 WNV studies, 312 arenaviruses evolutionary mechanisms, 314 genome segmentation, 313 growth hormone deficiency syndrome, 315 Lassa fever virus, 313 lymphocytic choriomeningitis virus, 313 recombination events, 314 species of, 313 biosphere and virosphere diversities, 298–9 evolutionary mechanisms, 302–4 genetic variation types, 301 genome size evolution, 298 quasispecies swarms, high error rates, 300–302 virosphere, 298 virus variation, 299–300 viral zoonoses communication, 103–4 control, 103 epidemiology climate change and vectors, 91 human–animal relationship, 89–90 migration and population movements, 90–91 and human behavior EEE, 95 encephalitis, 95 JE, 95 LAC virus, 95 Saint Louis encephalitis, 95 TBE, 95 Venezuelan equine encephalitis, 96 WNV, 94–5 Yellow fever, 94 and human societal values, 91–3 respiratory viral zoonoses HeV, 97 influenza H1N1, 97 influenza H5N1, 97 NIV, 97 SARS, 97 travel and, 98 transmission, 89 waterborne contamination, 98–9 enterovirus and hepatovirus, 99 epidemiology, 100 prevention and control, 100 wildlife-associated bushmeat hunting in Cameroon, 101 epidemiology, 101–3 viral zoonotic transfer, socio-ecology deforestation and fragmentation, 80–81 Hendra, 83 historical perspective, 78–9 human–animal interface, 79 influenza, 83–4 Nipah virus, 82
viral zoonotic transfer, socio-ecology (cont’d)
surveillance, 79–80
urbanization, 81–2
virus, defined, 4
VVD see vector-borne viral diseases (VVD)

waterborne viral zoonoses
contamination, 98–9
enterovirus and hepatovirus, 99
epidemiology, 100
prevention and control, 100

West Nile virus (WNV)
arboviral host range, 66–9
arbovirus host alternations, 308
birds, migration and disease spread, 158

blood-feeding patterns, Cx. tarsalis life history, 48
diagnostic virology, 256–7
mosquito-borne arbovirus epistystems, North America
climate influence, 26–7
future climatic changes effect, 27
viral zoonoses and human behavior, 94–5
wildlife-associated viral zoonoses
bushmeat hunting in Cameroon, 101
epidemiology, 101–3

yellow fever (YF)
climatic variables and emerging VVD, 9–11
viral zoonoses and human behavior, 94
