Dedication xiii
List of contributors xiv
Foreword xvii
Preface xviii

1. The Physiology of Pain 1
Rohit Juneja and Siân Jaggar

Introduction 1
Definitions 1
Peripheral mechanisms 2
Peripheral receptors 2
Mechanisms of inflammatory pain 5
Central mechanisms 7
Spinal cord modulation 7
Supraspinal modulation 14
Pain perception 15
Summary 15

2. Principles of Acute Pain Assessment 17
Donna Brown

Introduction 17
Measurement of acute pain 18
Unilateral pain-rating scales 19
Verbal rating scale 19
Visual analogue scale 20
Numerical rating scale 21
The faces of pain scale 22
The Wong-Baker FACES pain scale 22
Limitations 23
Multidimensional pain-rating scales 23
The McGill Pain Questionnaire 23
The Short-Form McGill Pain Questionnaire 24
Royal Brompton and Harefield NHS Trust pain assessment tool 24
## Contents

- **Brief Pain Inventory** 27
- **Considerations** 27
- **Leeds Assessment of Neuropathic Symptom and Signs** 28
- **Pain Score** 28
- **Assessing pain in patients across the age spectrum** 28
  - **Paediatric pain assessment tools** 28
  - **Older people (65 years and over)** 31
- **Applying pain assessment tools** 31
  - **None-to-mild cognitive impairment** 31
  - **Moderate-to-severe cognitive impairment** 34
- **When should pain be measured?** 35
  - **Recovery ward** 35
  - **Pain assessment at ward level** 37
- **Summary** 37

### 3. Barriers to Effective Pain Management 45

_Eloise Carr_

- **Introduction** 45
- **Patient barriers** 46
  - **Anxiety and pain** 46
- **Professional barriers** 48
  - **Assessing pain** 49
  - **Communication with other health care professionals** 51
- **Organisational barriers** 54
  - **Accountability** 55
  - **Local policies** 56
  - **Local resources** 56
- **National perspectives – new legislation on prescribing** 57
- **Global barriers and policies** 58
- **Conclusion** 59

### 4. Psychosocial Perspectives of Acute Pain 64

_Rachel Hagger-Holt_

- **Introduction** 65
- **The medical model: a need for extension** 66
- **Biopsychosocial model of pain** 68
  - **Gate control theory of pain** 69
- **Psychological theories** 70
  - **Behavioural theory** 71
  - **Cognitive theory** 72
- **Application to a specific area** 74
  - **Preoperative preparation** 74
  - **Postoperative treatment** 76
- **Summary** 77
- **Acknowledgements** 77

iv
## Contents

5. **The Role of Personal Coping Strategies in the Management of Perioperative Pain**
   *Dee Burrows and Elaine Taylor*
   
   **Introduction**
   **What do we mean by ‘coping strategies’?**
   **The historical context of personal pain-coping strategies**
   **From taught to self-generated strategies in acute care**
   **Engaging patients in their own pain management**
   **Findings**
   **The role of personal coping strategies**
   **Summary**

6. **How Analgesics Work**
   *Kirsty Scott*
   
   **Introduction**
   **Non-opioid analgesics**
   **Anti-inflammatory agents**
   **Paracetamol**
   **Opioid analgesics**
   **Opioid mode of action**
   **Local anaesthetics**
   **Lidocaine**
   **Bupivacaine hydrochloride**
   **Levobupivacaine**
   **Ropivacaine**
   **Combining a local anaesthetic with an opioid**
   **Other agents**
   **NMDA receptor antagonists**
   **α2-Adrenergic agonists**
   **Summary**

7. **The Evidence for Acute Perioperative Pain Management**
   *Jane Quinlan*
   
   **Introduction**
   **Randomisation**
   **Bias**
   **Double-blind**
   **Meta-analysis**
   **Systematic review**
   **Confidence intervals**
   **Levels of evidence**
   **Pain measurement in research**
   **Number needed to treat**
   **The placebo effect**
## Contents

Evidence for effectiveness of specific drugs
- Paracetamol (acetaminophen) 116
- Non-steroidal anti-inflammatory drugs 117
- Oral opioids 117
- Intramuscular opioids 117
- Patient-controlled analgesia 118
- Epidural analgesia 119
- Ketamine 120
- Gabapentin 120
- Clonidine 120
- Magnesium 121
- Multimodal analgesia 121
- Recovery from surgery 122
- Summary 122

8. Regional Anaesthesia and Analgesia, Part 1: Peripheral Nerve Blockade 127
   Barbora Parizkova and Shane George

   - Introduction 127
   - General considerations 128
   - Commonly used agents 130
   - Review of evidence in different populations 131
   - Peripheral neural blockade 135
     - Brachial plexus blockade 137
   - Lower limb regional analgesia 137
     - Femoral nerve blockade 138
     - Lumbar plexus blockade 139
     - Sciatic nerve blockade 139
   - Postoperative care 139
   - Paravertebral blockade 140
     - Efficacy, indications, contraindications 140
     - Techniques 140
     - PVB nursing care, observations and side effects 141
   - Other techniques 142
   - Summary 142

9. Regional Anaesthesia and Analgesia, Part 2: Central Neural Blockade 144
   Barbora Parizkova and Shane George

   - Neuraxial techniques – spinals and epidurals 144
     - Anatomy 144
     - Specific contraindications to neuraxial anaesthesia 147
     - Side effects and complications of neuraxial blockade 147
Contents

Epidural blockade 149
   Epidural techniques 150
Spinal (intrathecal or subarachnoid) anaesthesia 151
   Technique 152
   Duration of action 153
   Continuing care and observation 153
   Towards safer practice with neuraxial analgesia 154
Summary 156

10. Patient-Controlled Analgesia 161
Gillian Chumbley

  Introduction 161
  The evidence for PCA versus conventional analgesia 163
  What do the systematic reviews tell us about PCA? 164
     Opioid consumption 164
     Patient control 165
     Satisfaction 165
  Standard prescriptions for PCA 166
  Patient selection and contraindications for using PCA 166
  PCA programmes and definitions 167
     Loading dose 167
     Bolus dose 167
     Dose duration 168
     Lockout interval 168
     Dose limits 169
     Background infusion 169
  Monitoring and documentation of PCA 170
     Respiratory rate 170
     Sedation scores 171
     Blood pressure 172
     Pain score 172
     Location of pain 173
     Amount of drug used (analgesic consumption) 173
     Side effects of PCA 173
  When to stop PCA? 175
  Maintaining the patient’s safety when using PCA 177
     Patient to press 177
     Staff education 177
     Standardisation of PCA solutions 177
     Dedicated IV access 178
     Device malfunction 178
  Patients’ views of PCA 179
     Fear of addiction and overdose 179
     Information about the device 179
     Opioid side effects 180
     Other concerns: alarms and attention from nurses 180
Contents

What do patients want to know about PCA? 181
   Dangers of morphine 181
   Side effects of morphine 182
   Alternative pain relief 182
   Support from staff 182
   How to use PCA and when to receive information 182
Summary 182

11. Other Routes of Opioid Administration 186

Ian McGovern

Introduction 186
Intravenous route 187
   Intermittent intravenous bolus administration 187
   Continuous intravenous infusion 188
   PCA techniques 188
Intramuscular and subcutaneous routes 189
   Individual agents 190
Enteral routes 190
   Oral route 190
   Rectal route 194
Transdermal route (reservoirs and matrix) 194
   Transdermal fentanyl reservoir patches 195
   Iontophoretic transdermal delivery systems 195
Transmucosal routes 196
   Intranasal route 197
   Sublingual and buccal routes 197
Pulmonary route 198
Locally administered opioids 198
Summary 198

12. Managing Perioperative Pain in Special Circumstances 203

Paediatric Pain Management 203

Elizabeth M.C. Ashley

Introduction 203
Licensing of analgesic medicines in paediatric practice 204
Routes of drug delivery 204
Pain management in neonates and children 205
   Fetal pain 205
   Neonatal pain 205
   Pain in children 206
   Stress response 206
Pain assessment 206
   Neonates (up to 1 month; or ex-premature up to 60 weeks’-post-conceptual age) 206
   Infants and toddlers (1 month–3 years) 207
Contents

Children (3–7 years) 207
Older children and adolescents (7 years plus) 207
A pain service for children 207
A multimodal approach to pain relief in children 208
Local anaesthetic infiltration and peripheral nerve blocks 208
Simple analgesics 209
  Paracetamol 209
  Non-steroidal anti-inflammatory drugs 209
  Codeine phosphate 210
Morphine 210
  Oral morphine 210
  Intravenous morphine infusions 210
  Subcutaneous morphine infusions 211
  Morphine PCA 211
  Morphine NCA 211
Epidural analgesia 212
  Ketamine 213
  Clonidine 213
Monitoring and complications 213
  Paediatric day-case surgery 213
  Pain on the paediatric ICU 214
  Postoperative nausea and vomiting in children 214
  Chronic pain development in children 214

The Older Person 216
Lesley Bromley

Physiological changes of aging 217
Pharmacokinetic changes in the elderly 217
  Absorption 217
  Distribution 217
  Elimination 218
Pharmacodynamic changes 218
Cognitive impairment 218
Specific medicines in the older person 218
  Opioids 218
  Paracetamol 219
  Tramadol 219
  Local anaesthetics 219
  NSAIDs 220

Renal Dysfunction 221
Lesley Bromley

Specific drugs in renal failure 222
  Paracetamol 222
  NSAIDs 222
  Opioids 222
  Tramadol 222

ix
## Contents

**Day Surgery Setting**  
*Lesley Bromley*  
223

**The Known or Suspected Substance Misuser**  
*Brigitta Brandner and Julia Cambitzi*  
225

### Introduction  
225

### Definition of addiction  
225

### Common treatments for addiction  
226

- Methadone maintenance  
  226
- Buprenorphine  
  226
- Naltrexone  
  227

### Perioperative pain management in the substance misuse patients  
227

### Preoperative patient assessment  
227

### Perioperative pain management  
228

### Discharge planning  
229

**The Opioid-dependent Patient**  
*Brigitta Brandner and Julia Cambitzi*  
230

### Definitions  
231

- Addiction  
  231
- Physical dependence  
  232
- Tolerance  
  232
- Pseudoaddiction  
  232
- Maladaption  
  232

### Opioid rotation  
232

### Treatment plan  
233

- Satisfactory pain relief  
  233

### Suitable techniques  
234

### Withdrawal  
235

### Psychological support  
236

**Acute Neuropathic Pain**  
*Ian McGovern*  
237

### Introduction  
237

### Pathophysiology  
238

### Clinical features  
239

### Chronic post-surgical pain  
239

### Post-surgical neuropathic pain syndromes  
240

- Post-amputation pain syndromes  
  240

### Complex regional pain syndromes  
241

### Treatment  
242

- Pharmacological treatments  
  242
- Other treatment options  
  245

### Prevention  
246

### Summary  
246
Contents

13. Transcutaneous Electrical Nerve Stimulation in Perioperative Settings 248
   Mark I. Johnson and Joanne Bagley
   Introduction 248
   Background 249
   Historical context 250
   Definition of TENS 251
      The standard TENS device 251
      TENS-like devices 252
   The principles of TENS 254
      TENS techniques 254
      Mechanism of analgesic action 256
   Principles of clinical technique 259
      Electrode positions 259
      Electrical characteristics of TENS 261
      Timing and dosage 261
      Contraindications 261
      Precautions and adverse events 262
   TENS in the perioperative setting 262
      Clinical indications 262
      Merits of TENS 263
      Perioperative TENS protocol 263
   TENS efficacy: clinical research evidence 265
      TENS for pain 265
      TENS for post-surgical nausea and vomiting 267
      TENS for other post-surgical symptoms 268
   Summary 269

14. Risk Management in Perioperative Analgesia 277
   Jeremy Mitchell
   Introduction 277
   Consent to treatment (Department of Health 2004) 278
   Consent for perioperative analgesia 279
   Adequate patient information 280
   Neurological damage associated with neuraxial analgesic techniques 282
      Likelihood of neurological damage from neuraxial analgesic techniques 283
      Timing of insertion and removal of epidural catheters in relation to administration of anticoagulants 284
   Complications associated with peripheral nerve blocks 286
      Toxic reactions to local anaesthetic drugs 286
      Neurological injury following peripheral nerve blocks 287
   Perioperative pain management and organisational risk management 287
   Risk assessment 288
Contents

Risk management standards 290
Summary 290
Notes 293

15. Education 294
   Angela Cousins

   Introduction 294
   Health professionals’ education 295
      Undergraduate education 295
      Postgraduate education for members of the APS 295
      Postgraduate tertiary education 296
      Postgraduate institutional education 297
      Certification and accreditation 298
      Educational resources 300
      Criteria for referral to pain management service 300
      Safer prescribing 302
      Safer analgesia administration 304
   Patients 304
      Fear of pain 305
      Treatment options 306
   Patient-related educational material 307
   Summary 307

Index 310
