**INDEX**

Absolute fitness, 140, 184–185, 257
in natural selection, 140–141

Accumulated admixture (M)
per generation admixture vs., 235–236
in simple admixture model, 227–228

Adaptation, 203
to disease and dietary change, 190
evolutionary forces and, 20
genetic drift and, 20
among high-altitude populations, 192–193

Adaptive value, of Duffy allele, 188–189

Admixture, 257
to African-Americans, 253–255
defined, 226
estimating, 228–229
extending analysis of, 229–230
genetic drift vs. gene flow and, 231
in human populations, 226–230
in Native American origins, 249
simple model of, 226–228

Admixture estimating model, 228–229

Advantage, in natural selection, 139

Aerobic capacity, in low vs. high-altitude populations, 192

Africa
in Duffy negative allele geography, 187–189
hemoglobin S allele in, 183–187
hominin dispersal outside, 195–196
human evolution in, 243–245, 256
human skin color in, 194, 196
lactase persistence allele in, 191–192
in Native American origins, 248–249

African-Americans
admixture to, 253–255
European gene flow into, 226, 228, 231

African apes
evolution of, 88–92, 96
relationship to other apes and to humans, 89, 91–92, 96

African replacement model, of human evolution, 243

Africans, Y chromosome haplogroups among, 95–97

Agriculture, 198–202
genetics and spread of, 249–251
in human population explosion, 20
in spread of malaria, 185–186

AIDS (acquired immune deficiency syndrome)
CCR5-Δ32 allele and resistance to, 189–190, 203
in human populations, 4

Åland Islands case study, 239–241

Albumin, in analyzing ape–human relationship, 91

Allele counting method, 29–30, 45–46, 184

Allele frequencies, 131–132, 168, 203, 257
changes over in time in, 45
chi-square statistic and, 47–48
computing, 25–30
deviations from random mating and, 36, 38–39, 44
Hardy–Weinberg equilibrium and, 24–40, 45–48
in impact of inbreeding on genotype frequencies, 63
INDEX

inbreeding and, 51, 64, 75
in linkage disequilibrium, 40–42
among more than two alleles, 42
with X-linked genes, 43–44
Alleles, 45, 131, 168, 257
codominant, 9–10
defined, 8
dominant and recessive, 9–10
in genetics, 8–10
in haplotypes, 11–12
harmful recessive, 161–162
Amino acids
in analyzing ape–human relationship, 89–90
DNA sequences for coding, 79
in hemoglobin molecule, 182
mutations and, 78
Among-group variation, 213, 257
Ancestors
inbreeding among descendants of, 49–51
mitochondrial DNA and, 12–13
Ancestry-informative markers (AIMs), 257
in admixture estimating model, 229
AND rule, 15–16
Anthropological genetics, 21
Anthropology
human population structure and history
in, 237–238, 255–256
inbreeding of human populations in, 65
population genetics and, 19–21
Antibodies
in analyzing ape–human relationship, 89
red blood cell markers and, 10
Antigens
with Duffy blood group, 187
red blood cell markers and, 10
Apes
classification of, 88–89
evolution of, 88–92, 96
traits shared with humans, 88
Archaeology, 1
in history of modern humans, 242–243
Asia
in colonization of Polynesia, 251–252
hemoglobin S allele in, 186–187
human African origins and, 245
human evolution in, 243
human skin color in, 194, 198
lactase persistence allele in, 191
in Native American origins, 248–249
origins of agriculture in, 249
Asian great ape, 89, 91, 96
Asians
Neandertals vs, 247
Y chromosome haplogroups among, 95–96
Assimilation model, of human evolution, 243
Assortative mating, 19, 257
Hardy–Weinberg equilibrium and, 36, 44
Assortment, Mendel’s law of independent, 7, 15
Aunt–nephew mating, inbreeding due to, 54, 59
Australasia, human skin color in, 194
Australia, in colonization of Polynesia, 251
Australians, Y chromosome haplogroups among, 96
Autosomes, 257
in assessing human genetic diversity, 13
Average genetic similarity, in R matrix, 234
Average population size, 117
in evolutionary theory vs. reality, 167
of hemoglobin molecule, 182–185
hemoglobin S and, 183–185
Base pairs (bps), 5, 257–258
Bases, in DNA, 5, 19, 78
Bedik tribe, migration matrix analysis of, 223–225
Bering Strait, in Native American origins, 248
Between-group variation, 3–4, 213, 258
measuring, 213–215
in R matrix, 233–234
Biological anthropology, 1
Biological evolution, cultural evolution vs., 181–182
Biological relatives, 52
Black death, CCR5-Δ32 allele and, 190
Blood
genetic markers in, 27–28, 253
hemoglobin in, 182
Blood cell production, in low- vs. high-altitude populations, 192
Bonobos, relationship to other apes and to humans, 89, 91–92, 96
Bottlenecks, 258
demographic history and coalescent theory and, 131
in populations, 118
Bougainville Island study, 27–28, 239
Brain size
  in human evolution, 243
  selection for increased, 166
Breastfeeding, evolution of, 190
Breeding population, 18
Breeding population size, 132, 258
  effective population size vs., 117–118
  fertility variation and, 118–119
  genetic drift and, 112–113
  sex ratio and, 119
Caingang Indians, sex ratio and, 119
Calculus, 14. See also Mathematics
  formulas for selection for heterozygotes, 177–178
Card decks, probability and, 14, 16
Carriers, sickle cell, 182
Cattle farming, lactase persistence allele and, 191
Cavalli-Sforza, Luigi Luca, 21
CCR5-Δ32 allele, disease resistance and, 189–190
CCR5 (C–C chemokine receptor type 5) gene, 79, 189, 203
Census population size, 258
Central America, European gene flow into, 226
Chest dimensions, in low- vs. high-altitude populations, 192
Chimpanzees, relationship to other apes and to humans, 89, 91–92, 96
Chi-square ($\chi^2$) statistic, 258
  testing for Hardy–Weinberg equilibrium via, 39, 47–48
Chromosomal changes, 79
Chromosomes, 5, 258. See also
  Y-chromosome DNA
  in detecting recent selection, 199–200
  dominant and recessive alleles and, 9
  effect of mutations on, 79
  genetic markers on, 8
  inheritance and, 6–7
  Mendel’s laws and, 5–7
  mutations of, 96
  in recombination, 7
Classical genetic markers, 11
Cline, 258
Coalescence, average time to, 127–130
  coalescent theory, 125–132, 258
  coalescent trees, 130–131
  codominant alleles, 9–10, 168, 258
  in computing genotype frequencies, 24, 28
  selection with, 152–154
Cold injury hypothesis, skin color and, 197–198
Colonization, of Polynesia, 251–252
Common ancestry
  of apes and humans, 91–92
  in average time to coalescence, 127–130, 132
  in coalescent theory, 126–127
  computing inbreeding coefficient and, 57
  dating of divergence from, 90
  in inbreeding, 75
  inbreeding and close, 51–54
  Congenital defects, inbreeding and, 65
Consanguineous marriages, 258
  among Romany of Wales, 67
  computing random and nonrandom inbreeding components and, 70–73
demography of, 66
genealogical diseases and, 65
  in human populations, 65–66
  in potential-mates analysis, 74
Continental–island model, 208
Cousin marriages
  inbreeding due to, 53–55, 57–61, 75
  marital isonymy and, 68–70
  among Navajo, 67–68
  in potential-mates analysis, 74
  selection and inbreeding and, 165
  in surname analysis, 68
Crick, Frances, 5
Cultural anthropology, 1
Cultural diffusion, in origins of agriculture, 249–250
Culture, 19–20, 258
Culture change, 200
  hemoglobin S evolution and, 185–187
Dairy farming, 198
lactase persistence allele and, 191
Dark skin
  in colonization of Polynesia, 251
  evolution in human populations, 195–196
Darwin, Charles, 19, 68, 139, 197
Darwin, George, 68
Degrees of freedom, chi-square statistic and, 47–48
Deletions, 78–79, 96, 258
Demic diffusion, in origins of agriculture, 249–251
Demographic history, coalescent theory and, 130–132
Demography, 132
in Åland Islands case study, 240–241
in balancing genetic drift and gene flow, 219
in calculating mean inbreeding coefficient, 61
of consanguineous marriages, 66
in detecting recent selection, 200–201
evolutionary forces and, 19–20
in future human evolution, 201–202
in human evolution, 198–199
isolation by distance and, 220
of kin-structured migration, 212
in migration matrix analysis, 225
in potential-mates analysis, 74
role in human mate choice, 66
Denisovan genome, 247
Developmental acclimatization, in low- vs. high-altitude populations, 192
Diet in detecting recent selection, 200
in human evolution, 203
lactase persistence allele and, 191
Dietary advances, in cultural evolution, 181
Dietary change, adaptation to, 190
Diffusion, in origins of agriculture, 249
Diploid inheritance, 12, 258
Diploid population, in average time to coalescence, 128
Directional selection, 166, 259
Disease, 198
adaptation to, 190
in future human evolution, 202
in natural selection, 203

Horticulture
  in New Guinea case study, 238
  in spread of malaria, 185–186
Hotspots, of mutation, 80
Human cultural behavior, evolutionary forces and, 19–20
Human diet evolution, lactase persistence and, 190–192
Human evolution
  genetic drift in, 115–116
  natural selection in, 181–182
  Y chromosome in tracing, 92–97
Human genetic diversity, assessing, 10–13
Human genetic variation, studies of, 203
Human genome data, in detecting recent selection, 199
Human mate choice, inbreeding and, 65–66
Human population genetics
  genetic, mathematical, and anthropological background of, 1–21
  short history of, 20–21
Hunting/gathering lifestyle, 198–201
  genetic drift and, 20
Hutterite data, in computing random and nonrandom inbreeding components, 70–72
Hybrid populations
  in admixture estimating model, 229
  genetic drift vs. gene flow and, 231
  and per generation admixture vs. accumulated admixture, 235–236
  in simple admixture model, 226–228
Hylobatidae (hylobatids), 88–89, 92
Hypoxia, adaptation to high-altitude, 192–193
Identity by descent, 260
Identity by descent (Continued)
due to genetic drift, 215–216
in impact of inbreeding on genotype frequencies, 63, 75
infinite alleles model and, 134–136
Identity by state, 261
alleles in, 53–56
in impact of inbreeding on genotype frequencies, 63
Immunology, in analyzing ape–human relationship, 89–91
Inbreeding, 19, 49–75, 261
ancestry paradox and, 49–51
in colonization of Polynesia, 252
decay of heterozygosity over time and, 133
defined, 75
effects of cumulative, 59
evolutionary forces and, 64
genealogies and, 49–53
Hardy–Weinberg equilibrium and, 35–36, 44
in human populations, 4, 65–74
impact on allele frequencies, 64
impact on genotype frequencies, 62–64
incest vs., 66, 75
loss of heterozygosity over time due to, 121
medical impact of, 65
population genetics and, 62–65
quantifying, 51–62
random and nonrandom components of, 70–73
selection and, 160, 165–166
types of, 53–55
Inbreeding coefficient, 51, 55–61, 75, 261
calculating mean, 60–62
computing, 56–57
defined, 55–56
estimating from marital data, 60
inbred common ancestor and, 58–61
among Navajo, 67–68
in potential-mates analysis, 74
relationship levels and, 57–59
among Romany of Wales, 67
from studying marital isonymy, 68–70
Inbreeding loops, 53–55
computing inbreeding coefficient and, 57–58, 60–61
Inbreeding rates/levels, 65–66
Inbreeding studies
using genealogical data, 66–68
using potential-mates analysis, 73–74
using surname analysis, 68–73, 75
Incest, 261
in human populations, 66, 75
in potential-mates analysis, 74
Indel (insertion and deletion), 78–79, 261
Independent assortment, Mendel’s law of, 7, 15
Individual ancestry, in admixture analysis extension, 230
Industrialization
in human population explosion, 20
skin color and, 197
Industrial Revolution, peppered moth population genetics and, 3
Infection resistance, in human skin color evolution, 195
Infinite alleles model, 124, 134–136, 261
Infinite sites model, 125, 261
Inheritance. mitochondrial DNA and Y-chromosome DNA in, 12–13
probability and, 6–7, 14
Insertions, 78–79, 96, 261
Interbreeding
human African origins and, 244–245
in human evolution, 243
between modern humans and Neandertals, 246
Inversion, 261
Irish famine, 219
Irish Travelers, 119
Irreversible mutation model, 81–84, 86, 97–99
formulas for mutation–selection equilibrium and, 178–180
Island model, 208–210, 230, 261
changes in allele frequency over time in, 231–232
Isolation by distance, 261
in Åland Islands case study, 241
genetic drift and gene flow in, 219–222
human African origins and, 245
Isonymous marriage. See Marital isonymy
Isonymy, 68, 261
Iterative equations, using recurrence relation to solve, 97–99
Jujay, Argentina case study, 241–242
Kalam tribe, in New Guinea case study, 238–239
Kin-structured migration, 212, 261
Kung, average reproductive age among, 113
Lactase, evolution of, 190–191
Lactase activity alleles, 191
Lactase persistence, 8–9, 198
human dietary evolution and, 190–192
Lactose intolerance, development of, 190–191
Language. See also Linguistics
history and, 237
in New Guinea case study, 238–239
Lapita culture, in colonization of Polynesia, 251
Latitude, skin color and, 196–198
Lesser apes, 88–89
Lethal dominant alleles, 151–152
Lethal recessive alleles, 150
Light skin, evolution in human populations, 196–198
Linkage, 261
of alleles, 11–12
Linkage disequilibrium (LD), 41, 261
in detecting recent selection, 200
Hardy–Weinberg equilibrium and, 40–42
Locus (loci), 45, 261–262
of genes, 8–10
of haplotypes, 11–12
linkages between, 40–42
with more than two alleles, 28–29, 42
rates of mutation at, 80
Long-range gene flow, migration matrix analysis and, 224–225
Long-range migration, 230–231
Lung volume, in low- vs. high-altitude populations, 192
Macroevolution, 262
defined, 3
Mainland population, in island model, 208–210
Major gene model, 13, 262
Malaria, 198, 203
agriculture and spread of, 185–186
Duffy blood group and, 187–189
hemoglobin S and, 182–187
natural selection due to, 187
Marital data, estimating inbreeding coefficient from, 60
Marital isonymy
computing inbreeding coefficient from, 68–70
computing random and nonrandom inbreeding components and, 70
Marriage
in Åland Islands case study, 240
in calculating mean inbreeding coefficient, 61–62
in European–African-American gene flow, 253–254
as impacted by isolation by distance, 219–221
mating vs., 52
in migration matrix, 222–224
among Navajo, 67–68
in New Guinea case study, 238–239
Massachusetts, marriage and migration in colonial, 2
Massachusetts towns, random and nonrandom inbreeding components in, 72–73
Mating(s)
in calculating mean inbreeding coefficient, 60–62
as impacted by isolation by distance, 219–221
marriage vs., 52
population structure and, 238
Maximum fitness values, in selection for heterozygotes, 158–160
MC1R (melanocortin 1 receptor) locus, in human skin color evolution, 196
Mean fitness, 262
in general natural selection models, 146–147
in natural selection simulation, 142, 144–145
of recessive homozygotes, 148–150
in selection against dominant alleles, 151
in selection against heterozygotes, 154–157
in selection for heterozygotes, 157–158
Mean inbreeding coefficient (F), 75
calculating, 60–62
from studying marital isonymy, 68–70
in surname analysis, 68
Mean population size, 117
Meiosis, 262
recombination and, 7
Melanesia
  in colonization of Polynesia, 251–252
New Guinea case study and, 239
Mendel, Gregor, 2
Mendelian genetics, 45
  anthropology and, 17
Hardy–Weinberg equilibrium and, 23
mitochondrial DNA and Y-chromosome DNA and, 12–13
  population genetics and, 2
  probability and, 16–17
Mendel’s law of independent assortment, 7, 15, 262
Mendel’s law of segregation, 6, 262
Mendel’s laws, 5–7, 15, 262
  recombination and, 7
Mental retardation, inbreeding and, 65
Mexico, European gene flow into, 228
Microevolution, 45, 262
  defined, 3
  evolutionary forces and, 19–20
  Hardy–Weinberg equilibrium and, 39
  history and, 237
Micronesia, in colonization of Polynesia, 251
Microsatellite DNA, in DNA analysis, 11
Middle East
  in Duffy negative allele geography, 187
  human evolution in, 243
  lactase persistence allele in, 191–192
  Neandertals in, 245
  origins of agriculture in, 249–251
Migration
  in Åland Islands case study, 239–241
  as limited by isolation by distance, 219–221
  gene flow via, 205–206
  genetic drift and, 106
  genetic drift vs. gene flow and, 230–231
  of Homo erectus, 196
  human African origins and, 245
  in island model, 208–210
  in Jujay, Argentina case study, 241–242
  kin-structured, 212
  in New Guinea case study, 238–239
  in two-way gene flow, 210–212
Migration matrix, defined, 222–223
Migration matrix analysis, 230–231, 262
  in Åland Islands case study, 241
  of genetic drift and gene flow, 221–225
Migration rate (m)
  in Åland Islands case study, 240
  in balancing genetic drift and gene flow, 216–219
  in island model, 208–210
  in migration matrix analysis, 221–225
  in two-way gene flow, 210–212
Minisatellites
  in DNA analysis, 11–12
