## Index

Acknowledgement (ACK), see Carrier Sense Multiple Access (CSMA)

Additive White Gaussian Noise (AWGN), see noise

Amplitude Shift Keying (ASK), see linear modulation

analog-to-digital converter
complex-valued ADC bandwidth, 56–57
definition, 49
real-valued ADC bandwidth, 51–52
analog front-end, 49–50

angular modulation
bandwidth determination with Carson’s rule, 110

Binary Frequency-Shift Keying (BFSK), 76, 116
Continuous-Phase Frequency-Shift Keying (CPFSK), 76–77, 108, 111–113
frequency modulation, 96, 107–109, 116, 133
Gaussian Frequency-Shift Keying (GFSK), 26–27, 31, 111

Gaussian Minimum-Shift Keying (GMSK), 27
Minimum-Shift Keying (MSK), 37, 94, 105, 110, 112–113, 116
modulation index, 27, 31, 108–112, 117

antennas
isotropic radiator, 69
omnidirectional, 69–70
sectorization, 69
antenna directivity, 69
antenna gain, 68–69
anti-alias filter, see sampling theory

amplifiers
linear, 98, 104, 107
Low-Noise Amplifier (LNA), 50–51, 55, 60–61
non-linear, 104, 107, 115
application profile, 176
arctan demodulator, see demodulation
Automatic Repeat Request (ARQ), see Backward Error Correction
backoff, see Carrier Sense Multiple Access

Backward Error Correction

Automatic Repeat Request (ARQ), 156
checksum, 31–33, 160–162
Cyclic Redundancy Check (CRC), 23, 26–27, 31–32, 38, 140, 158–160

Index

battery
  life, 10, 32, 42, 98, 168, 174
duty cycle, 168–169
ergy efficiency, 167–168, 174–175
  sleep mode, 168–170
baseband controller, 49, 62, 66
baseband signal, 49, 53, 58–59, 61, 63, 65–66
Barker code, 121–122
Beacon, 152–153, 168–169
Binary Frequency-Shift Keying (BFSK),
  see angular modulation
Binary Phase Shift Keying (BPSK), see
  linear modulation
differential, see linear modulation
Bit Error Rate (BER), 70, 72–77
Bluetooth
  (3,1) repetition code, see Forward Error Correction
basic rate (BR), 24, 27–28, 109
Enhanced Data Rate (EDR), 24, 26–27, 105–106
frame synchronization, 120
Gaussian pulse shaping, 26, 94, 111
OSI layer mapping, 22–23
piconet, 28–29
power classes, 25
relation to IEEE, 802.15.1 22–24
scatternet, 28
Carrier Sense Multiple Access (CSMA)
  Acknowledgement (ACK), 150–152
  backoff, 152
  Clear-To-Send (CTS), 150–152
  Collision Avoidance (CSMA/CA), 150
  Collision Detection (CSMA/CD), 150
  compared to spectrum sensing, 144
  exposed node problem, 150–152
  hidden node problem, 150–152
  in IEEE 802.15.4, 40
  in ITU G.9959, 31
  Request-To-Send (RTS), 150–152
  slotted, 147, 152
  unslotted, 152
  virtual channel sensing, 152
carrier synchronization
  Costas Loop, 127
data whitening, 128
  frequency offset, 90, 115, 125–128
  Phase Error Detector (PED), 127
  Phase-Lock Loop (PLL), 120, 127
  phase offset, 90, 115, 125–128
  Carson’s Rule, see angular modulation
channels
  frequency, 62, 67–68, 132–133, 141, 144–147, 149, 153–154
  large-scale fading, see fading, large-scale
  logical, 67–68
  multipath, see fading, small-scale
  physical, 67–68
channelization
  complex-valued mixing, 56
digital, 49, 59, 61–63, 66
  one-sided spectrum, 53–54, 85
  real-valued mixing, 51–54
  two-sided spectrum, 51, 53–54, 56, 85–86
  checksum, see Backward Error Correction
chip rate, 114, 135–136
Clear-To-Send (CTS), see Carrier Sense Multiple Access
cloud, 2–5, 7, 15–16
cloud computing, 2
Code Division Multiple Access (CDMA), 62, 154
complex-valued mixing, see
  channelization
complex-valued signal, 56, 84–88
conjugate ambiguity, 102–103
conjugate symmetry, 54–56, 85
Continuous-Phase Frequency-Shift Keying (CPFSK), see angular modulation
Costas Loop, see carrier synchronization
constant envelope, 106–107, 115–116, 133
contention free period, see IEEE 802.15.4
correlation demodulator, see demodulation
Cyclic Redundancy Check (CRC), see Backward Error Correction
data whitening, see carrier synchronization
DC offset, see direct-conversion demodulation
arctan, 116–119
cohere, 99, 101–102, 110–111
correlation, 115–116
non-coherent, 110, 112
differential coding, 99–100, 102, 105–106
decoder, 99–100
encoder, 99–100, 105
quadrature, 102, 105–106
digital-to-analog converter, 58
Digital-Down Converter (DDC), 62–63
Digital-Up Converter (DUC), 62, 65
digital channelization, see channelization
direct-conversion architecture, 50, 61
DC offset, 57–59, 63
IQ imbalance, 57–60, 63
LO leakage, 57, 59, 63
off-tuning, 59, 63
receiver (DCR), 55–60
transceiver, 54
transmitter, 58–59, 66
Direct-Sequence Spread Spectrum (DSSS), 36–37, 43, 135–136, 154
spreading gain, 136
duty cycle, see battery life
error detection and correction
(3,1) repetition code, see Forward Error Correction
backward, see Backward Error Correction
checksum, see Backward Error Correction
Cyclic Redundancy Check (CRC), see Backward Error Correction
forward, see Forward Error Correction
energy efficiency, see battery life
exposed node problem, see Carrier Sense Multiple Access
fading
large-scale, 68–73, 76
shadowing, 70, 76–78
small-scale, 77–78
finite fields, 157
Forward Error Correction (FEC)
(3,1) repetition code, 164–165, 166–167
in Bluetooth, 166–167
frame synchronization
as channel estimation, 121–122
as coarse carrier/timing estimation, 121, 132
preamble, 33, 120
synchronization word (sync word), 120–122, 132
Frequency Division Multiple Access (FDMA), 36, 62, 145–146
Frequency Hopping Spread Spectrum (FHSS)
Adaptive Frequency Hopping (AFH), 154
concept, 133–134
as multiple access/channelization, 153–154
spreading gain, 134
Galois fields, 157
Gaussian distribution
central limit theorem, 73
Gaussian Frequency-Shift Keying (GFSK), see angular modulation
Gaussian Minimum-Shift Keying (GMSK), see angular modulation
Gaussian pulse, see pulse shaping
Gateway, 3, 7–9, 15, 29, 42–43
guaranteed time slots, see IEEE 802.15.4
half-sine pulse, see pulse shaping
Hamming distance, 164–165
hidden node problem, see Carrier Sense Multiple Access
IEEE 802 reference model, see protocol stack
IEEE 802.11, see Wi-Fi
IEEE 802.15.1, see Bluetooth
IEEE 802.15.4
bands, 35–37, 141–145
beacon-enabled frame, 152–153, 168–169
channel plan, 34–35, 141–143
contention free period, 153
data rates, 37
guaranteed time slots, 153
OQPSK with half sine pulse shaping, 94, 105, 110, 112–114
sensitivity, 35
synchronizing duty cycles, 168–169
Industrial Scientific Medical (ISM) bands
2.4 GHz, 141–143
congestion, 143–144
sub-GHz, 143
Intermediate Frequency (IF), 50–51, 54–55, 58
Inter-Symbol Interference (ISI), 81, 91–94
IPv6 over Low-Power Wireless Personal Area Networks (6LoWPAN), 29
isotropic radiator, see antennas
ITU-T G.9959
checksum, see Backward Error Correction
data rates, 31
Gaussian pulse shaping, 31, 111
OSI layer mapping, 29
sensitivity, 30
synchronizing duty cycles, 169–170
IQ imbalance, see direct conversion
linear modulation
8-Level Differential Phase Shift Keying (8DPSK), 105–106
8-Level Phase Shift Keying (8PSK), 106
π/4-Differential Quadrature Phase Shift Keying (π/4-DQPSK), 105
π/4-Quadrature Phase Shift Keying (π/4-QPSK), 104–105
Amplitude Shift Keying (ASK), 35, 37, 98, 136
Binary Phase Shift Keying (BPSK), 34–35, 37, 98–99
Differential Binary Phase Shift Keying (BPSK), 100–101
Differential Quadrature Phase Shift Keying (DQPSK), 102, 105
Offset Quadrature Phase-Shift Keying (OQPSK), 34–35, 37, 104–105, 110, 112–114, 136
Quadrature Phase Shift Keying (QPSK), 88–89, 101–102, 104
Line of Sight (LOS), 68, 70, 79–80
link budget analysis, 68–70, 76–78
Local Oscillator (LO), 50, 55, 59
LO leakage, see direct-conversion
Low-Noise Amplifier (LNA), see amplifiers
matched filter, 92, 130
Minimum-Shift Keying (MSK), see angular modulation
modulation, see angular modulation, linear modulation
multipath channel, see fading, small-scale
