Index

3-2-1 location principle, 875 (online, Ch 40)
3D printing (see additive manufacturing) 55, 245
abrasion, 300
abrasive grain size, 607
abrasive hardness, 606
abrasive jet machining (AJM), 629, 658
(along, Ch 30)
abrasive machining, 604–605
abrasive media, 714–715
abrasive water-jet cutting (AWC), 627
abrasives, 162, 606
acceptable quality level (AQL), 250
accounting, 896–897 (online, Ch 41)
accuracy, 195, 232–233
accounting, 896–897 (online, Ch 41)
acceptable quality level (AQL), 250
accounting, 896–897 (online, Ch 41)
accuracy, 195, 232–233
assignable causes and variation, 232–233
assembly robots, 770
assembly jigs, 887 (online, Ch 40)
artificially aging materials, 82
artificial intelligence (AI), 764
automated guided vehicles (AGVs), 19, 761
autoclave (composite fabrication), 438
autogenous welding, 797
autogenous welding, 797
autoquenching, 94
autobody applications, 17, 22, 94, 111, 138, 146, 150, 152, 154, 155, 163, 165, 169, 170–172, 174, 178, 179, 186, 274, 299, 308–309, 320, 351, 383, 398, 400, 407, 408, 420, 421, 423, 425, 430, 624, 632 (online, Ch 29), 746, 830; 935–937 (online, Ch 42); 943–945, 948
(online, Ch 43)
avotive materials and selection, 186
automotive applications, 250, 911–914 (online, Ch 42)
autoquenching, 94
babbitt, 142
back rake angle, 458, 485
backslash, 239
backward extrusion, 377
bainite, 83, 85
Bakelite (PF), 148, 152
ball lead screw, 561, 564
bamboo, 160
bandsaw, 582, 585–589
bar drawing, 374–375
bar folder, 394
barrel finishing, 713
baton-passing zone, 916 (online, Ch 42)
Bearings, 320
belt sanding, 716
bending, 341
bending design, 394–396
bending test, 33
benzene rings, 149
beryllium, 142
beryllium, 374
Bessemer process, 102
bevel protractor, 202, 212
bill of materials, 906 (online, Ch 41)
billet, 359
bimetallics, composite, 434
binders, powder metallurgy 323
binders, sand mold, 283
biocompatible, 138, 165
biodegradable plastics, 156–157
biomedical applications, 160, 163, 320, 735
bioplastics, 157
bismuth, 105, 129
Black-Huang model for shear strain, 463–464
blank coating, 727
blanking, 387–392
blanking finishing, 383
blasting, 300, 713
blast furnace, 313
blocking (forging), 363
bloom, 359
blow molding, 420
blowout, 373
blows, 282
BMW, 945 (online, Ch 43)
body-centered tetragonal (BCT) structure, 83
body-centered-cubic structure (BCC), 55, 58
bolster, 413
bolt manufacture, 366
bond strength, metallic, 53
bonded product (abrasive particles), 604
borescope, 220
borescope, 220

index
composite fabrication, fiber-reinforced, 435
laminar, 434
particulate, 434
sandwich structures, 435
composite fiber production, 435
composite hard lay-up, 438
composite injection molding, 440
composite joining, 441
composite machining, 441
composite materials, 187
composite materials inspection, 228
composite products, 422
composite properties, 169–170
composite recycling, 442
composite tapes, 436
composites, joining, 869
powder metallurgy, 323
secondary processes, 441
short fibers or flakes, 423
compound dies, 392
compression, 27
compression bending, 398
compression molding, 421, 439
compressive loading, 33
compressive strength (mold sand), 281–282
computed tomography (CT), 228
computer numerical control (CNC), 558
computer vision systems, 221
computer-aided design (CAD), 774–775
computer-aided manufacturing (CAM), 635
computer-aided testing and inspection (CATI), 22
computer-integrated manufacturing (CIM), 22, 772–773
concentricity, 200
conceptual design, 180
concrete, 168
cost considerations, 184
conductive adhesives, 859
cost, 2, 21
cost accounting, 896 (online, Ch 41)
cost considerations, 184
cost, total lifetime, 184
counterboring tool, 543–545
countersink, 545, 554
crystal structure, 51, 54
crystal growth (see grain growth)
crystal structure, 51, 54
cream, 45–46
cr普通 feed grinding (CFG), 618
crump, 46
creep, 45, 46
crump feed rate, 45
creep resistance, 127–128
critical cooling rate, 87
cross slip, 60
cross-trained operators, 943 (online, Ch 43)
crushing, 613
cryogenic conditions, 125, 129
cryogenic processing, 93
crystal growth (see grain growth)
crystal structure, 51, 54
cri具line ceramics, 430–433
cubic boron nitride (CBN), 166, 168, 607
cupronickels, 128
customer feedback, 895 (online, Ch 41)
customer service, 895 (online, Ch 41)
customer, internal and external, 3, 23, 911, 915
(online, Ch 42)
cut-and-peel method, 659 (online, Ch 30)
cut-off, 450
customor quality requirements, 895 (online, Ch 41)
cutter radius compensation, 570
cutting fluids, 494
bandsawing, 585
drilling, 552–554
grinding, 616
cutting force, machining, 455, 461–462
cutting parameters, 15, 446
cutting speed, 446–449
effects on tool, 473, 493
milling, 522, 527
water-jet and abrasive water jet machining, 629
cutting stiffness (see also, specific energy), 466, 467
cutting time computation, 451
cutting time, 503
broaching, 592
drilling, 537–539
face and end milling, 521
facing on lathe, 503
milling, 530
shaping, 598
tapping, 685–686
turning, 501
cutting tool coating processes, 486
cutting tool geometry, 468, 485
cutting tool hardness, 474
cutting tool materials, 472, 475–476, 486–487
cutting tool properties, 474, 476, 482
cutting tool reconditioning, 493
cutting tool surface treatments, 478
cutting tools, 5, 8
advanced ceramics, 165
boron carbide, 166
coating materials, 480
cubic boron nitride, 166
titanium nitride, 163
cutoff, turning (see parting), 503
cyanate ester, 857
cycle time, 912, 924, 940–941 (online, Ch 42)
cyclic loading, 48
cylindrical grinding, 619
cylindricity, 200
Czochralski method, 647 (online, Ch 29)
damping capacity, 33, 117–118
datum, 874 (online, Ch 40)
deburring, 668 (online, Ch 30), 727–728, 814
decanning, 328
decoupler, 911, 916, 927–928, 936, 940
(online, Ch 42)
deep drawing, 402–403, 406
dee deep reactive ion etching (DRIE), 640
(online, Ch 29)
deep-hole drilling, 541–542
defect prevention, 9, 245, 256
defects, 252
defense applications, 297
deflection, turning operations, 503
degassingification, 104
delayed-tack adhesives, 859
delivery, 21
delta-ferrite, 72
demand, 906 (online, Ch 41)
daily (DD), 911 (online, Ch 42)
levelled, 911 (online, Ch 42)
dendrites, 309
density, 48, 141
desorption, 104
depositied thin films, 642 (online, Ch 29)
deposition processes, 632, 635, 641 (online, Ch 29)
depreciation cost, 943 (online, Ch 43)
depreciation, 467
gage, micrometer, 205–206
diffusion, 466, 467
depth of cut, 448, 455
milling, 524
turning, 499, 501
depth-of-cut line, cutting tools, 484
design, 897–898 (online, Ch 41)
design considerations, 182–184
design defects, 46
design engineer, 10, 898 (online, Ch 41)
design for manufacture (DFM), 10, 898

welding inspection, 227

welding jigs, 813

welding metallurgy, 783–786

welding power sources, 812

welding preheat, 786

welding stresses, 786–787

welding, plastics, 666–667

welding, stress relief, 788

wet etching, 638 (online, Ch 29)

wet pressing, 432

wettability, 844

Whitney, Eli, 193, 881 (online, Ch 40), 943

(online, Ch 43)

WIP (see work-in-process)

wire brushing, 716

wire casting, 312

wire drawing, 376

wire EDM, 658, 659 (online, Ch 30)

wire EDM, 669, 689 (online, Ch 30)

wood, 169, 179

work coordinate system, 567

work hardening, 59, 349

workability, 46

workholder design, 874–876 (online, Ch 40)

workholders, 8, 450, 872–874 (online, Ch 40)

workholding, drilling, 549

workholding, lathe, 514–518

work-in-process (WIP) inventory, 894 (online, Ch 41), 932 (online, Ch 42)

workpiece configuration, 9

workpiece offset, 568

worm gear, 639

wrought alloys, 126

X-bar chart (see also, control chart), 241, 951

(online, Ch 43)

x-ray diffraction, 228

x-ray inspection (see radiographic inspection)

X-ray lithography, 635 (online, Ch 29)

yield point, 30, 350

(online, Ch 43)

Young’s modulus (see modulus of elasticity)

zero defects, 245, 251, 911 (online, Ch 42)

zero reference point, 560, 567

zinc, 55, 307–308

zinc alloys, 137

zirconia, 164–165

zirconium, 105
