Index

Notes: Abbreviations used: FGB - function generating bite
Pages numbers in *italics* refer to figures

adjustment, definition 36
adjustment to load
  chewing pattern height and width 54
definition 36
neuromuscular 91–93, 92
  soft and hard bolus mastication 57, 58
Ahlgren, J. 7, 112
Anastasi, G. 4
anterior contact area 105
anterior crossbite 136, 138
definition 136
  masticatory function, effects on 137–141, 139, 140
as neuromuscular syndrome 136–141, 137
  reverse-sequence chewing cycle 138
  unilateral posterior crossbite vs. 138, 138–139, 140
anterior open bite
  bilateral posterior crossbite and 215, 215–224
  unilateral posterior crossbite and 210, 210–215
anterior temporalis muscles
  activation, patients with normal occlusion 88, 91
  coordinated activity 87
  electromyography 13–15, 16, 18, 24, 87, 89, 90
  functional characteristics 88
area charts 19–20
artificial bolus see palatal button
automatic movements 77–81, 78, 79
automatisms, neuromuscular control 33
autonomic nervous system 66
axiography 156, 157
balancing side 35
basal development, mastication force and 93, 93
basal ganglia 68
bite plates, FGB appliance 150–158, 151
  actions/effects 150
  dental arch alignment 158
  development 151, 151–152, 152
  features 154
  “gothic arch-like” traces 155, 156, 157
  imprint 154, 155
  mandible disengagement 152–158, 153
  mandible self-repositioning 152–158, 153, 178, 179
  occlusal force 154–155, 156
  occlusal plane leveling 158
  posterior 149, 150–158
  premature contacts, protection from 158
  resin 151, 152
  stainless steel 150–158
Bjork, A. 101
bolus 23
  basal development and 93, 93
  chewing pattern height and width 54
  choice and standardization 23
  flavor 23
  hard 23, 57, 58, 91–92
  masseter muscle 88
  soft 23, 57, 58, 91–92
  type
    bone growth and 129–130
    neuromuscular changes and 91
  bolus-grinding stage 51
  bolus shredding analysis 55
bolus side 35
  condylar pattern, frontal plane 40–41, 42
  contralateral condyle on 41–42
  first molar pattern 40
  mandible, capacity to move on 54–55
  bone growth, bolus type and 129–130
  border movement 31–32, 35, 135
  Bracco, P. 3, 146, 168
  Bramanti, P. 4
  buccal shields, FGB appliance 158–163, 159
    actions/effects 158–159
    arches, anchorage for 163
    asymmetric force production 162
    decompression space creation 163, 163
dental stability 163
  muscle anchorage 159
  new bone tissue formation 163
  occlusal force 161
  optionals anchorage 163
  reequilibration of function 159
  self-regulated muscular force
    transmission 159–161, 161
  shape 159, 160
  symmetric force production 162, 162
  thickness 161, 161, 162
  wedge-like action 161
canines 105
capacity to adapt to load 92–93
diagnosis 23
case gnathic replicator 8–9, 9
  first molar pattern 38–39
case studies 185–224
central nervous system 30, 65, 66
  central pattern generator 31, 67, 77–79, 80
  periodontal feedback 79–81
cephalometry 176, 177
  anterior open bite and bilateral posterior
    crossbite 216, 221, 222
  anterior open bite and unilateral posterior
    crossbite 210, 214
  positional crossbite 194, 199
  unilateral posterior crossbite case
    studies 189, 200, 206
cerebellum 67, 68, 81
  cerebral cortex 68

Cervera, A.G. 146, 151
chewing cycles
  alterations, after dental correction 135
  average 12, 14
  early computer processing of plotted
data 12–13
  hard bolus 57, 58
  in premolar area 57
  recording protocol 23–24, 25
  repetitivity 46, 46–47
  reverse-sequence see reverse-sequence
    chewing cycle
  semi-loop morphology 44
  soft bolus 57, 58
  statistical–mathematical analysis
    difficulty 12–13
  tight 54
  unilateral posterior crossbite 190, 201–204
  variability 46, 46–47
chewing gum 23
chewing pattern(s) 37–43
  altered symmetry 44
  anterior open bite and bilateral posterior
    crossbite 217, 223, 224
  anterior open bite and unilateral posterior
    crossbite 211, 213
  bilateral vs. unilateral study 37, 38
  clinical aspects 43–57, 44
  closure pattern 44
definition 36, 36
diagnostic indices 47–57
  dimensional 52–54, 53
  positional 54–55
  vectorial 47–52
  see also individual indices
efficiency parameters 55–57, 56
first molar see first molar pattern
height 52–54, 53
information from 4
  on K7-I kinesiograph 21, 22
  motor control 30–31
neural control, functional intervention
  effects 133
opening pattern 44
in pathological conditions 32
  positional crossbite 195, 197
  positional dissymmetry 55
Index

study of, software programs 7
symmetry 44
unilateral posterior crossbite 120–130, 201–202
width 52–54, 53
clinical tests 10
closing angle 49–52, 50, 51
amplitude, bolus type and 51
functional balance 49
pathophysiology characteristics 51–52
reverse-sequence chewing cycle 52, 116
specularity and symmetry 52
unilateral posterior crossbite 120

closing direction 47–49, 48
physiological characteristics 49
reverse 49, 114
specularity and symmetry 52
unilateral posterior crossbite 120

closing reflexes 76
closure phase
condyle on bolus side 40–41
contralateral condyle on bolus side 42
first molar on bolus side 40
first molar on contralateral side 40

cognitive ability/skills
development, mastication and 64
preservation, chewing ability and 69
compensation 6, 37
condylar pattern
frontal plane 40, 40–42, 41
on bolus side 40–41
sagittal plane 37, 42, 42–43, 43
condylar shifts, FGB appliance 179, 180
condyles
at birth 42
movement 9
contralateral side 35
first molar pattern 40
masseter muscle 88, 92
cortical mastication areas 77
cortical structures 68, 68–69
cranial bones, structural asymmetry 130
crossbite
anterior see anterior crossbite
definition 101–102
dental classification 105–106, 106, 107
diagnosis 106, 106, 107
dissymmetry 100
eye age at emergence 100
environmental causes 103
etiology 103–104
functional changes 103, 103
functional classification 104–106, 105
hereditary factors 103
masticatory function alterations 98–143
mixed condition 140
motor pattern of mastication and 104
muscle coordination loss 91
as neuromuscular syndrome 100–106, 101
prevalence 102, 102–103
unilateral 24–26, 26
unilateral posterior see unilateral posterior crossbite
“crossbite syndrome” 168
cusp-to-cusp contact 81, 108, 158, 174
deciduous dentition
condylar pattern in sagittal plane 42, 42–43, 43
FGB appliance use 181
dental arch, functional divisions 105–106
dental contacts 146, 147
dento-alveolar–basal crossbite 111, 111
dento-alveolar crossbite 110, 110–111
orthodontic therapy 111
depressor muscles 84
diagnostic charts, K7-I kinesiograph 19
diencephalon 67–68, 68
diffusion tensor resonance magnetic imaging (DTRMI) scan, unilateral posterior crossbite 126, 129
dorsal spinal roots 67
electrognathography 10–22
electromyography (EMG) 7–8, 10–22
activity recording 24
anterior temporalis muscles 13–15, 16, 18, 24, 87, 89, 90
chewing cycles, first recording 11, 13–15, 15
crossbite side 120
evolution 10–22
individual variables 15
masseters 13–15, 16, 18, 24, 87, 89, 90, 88, 91
pathognomonic features 15
elevator muscles 84
Index

Enlow, D. 130
enteric nervous system 66
expansion springs, FGB appliance 163–168, 164
actions/effects 163
activation 164, 165
anchorage 170
forces transmitted 159–161, 163–166
intermolar distance, diametric increase 167, 166–167
palate, actions on 165
extrafusal receptors 76
Farina, D. 4
feedback compensatory mechanisms 81, 82, 83
feed-forward anticipatory mechanisms 81, 82, 83
first molar(s)
dento-alveolar crossbite 111
unilateral posterior crossbite 116
first molar pattern 38, 38–40, 39
on bolus side 40
on contralateral side 40
free nerve endings 70
front area, occlusion 57
functional compensation 34
functional crossbite 108–110, 109
functionalizing appliances 148, 148
historical aspects 146
functional magnetic resonance imaging (fMRI) 4, 5
functional matrix theory 130
functional occlusion 3–4
function generating bite (FGB) appliance 144–184, 145, 148
actions 146
palatal suture histomorphological issues 169–173
active physiological maintenance 168
active retention 150
basal development, remodeling and symmetric resetting 168
bilateral muscular coordination, before/after therapy 133–136
bone growth and remodeling 165
caries-free management 181–182
case studies 185–224
chewing pattern recovery 175, 175–176
compliance 182–183
components 149–150, 150
characteristics 149–169
see also individual components
cranial–maxillofacial basal actions/effects 176–181
definition 146
dental–alveolar–basal actions/effects 149–181
dual force production 161
fixed therapies vs. 173
force developed, physiological features 173–174, 174
future studies 181
as gnathological device 148
historical aspects 146
hyperdivergent craniofacial morphology 177, 178
hypodivergent craniofacial morphology 179, 180
initial correction 167
intermittent forces 173–174
joint function 179–181
masticatory function effects on 130
recovery 175–176
neural reprogramming 175
new tooth eruption 182
occlusal bite protection 174
self-regulation forces 174
therapy duration 181–182
tooth repositioning 161, 165
unique features 149
Garliner, D. 168
Gasser ganglion 31, 79
Gerber recordings 156
Gibbs, C. H. 8–9, 37, 38, 42, 112
Golgi’s corpuscles 70
Golgi tendon organs 76
Herring, S. 173
hippocampus 69
Hofman, N. 42, 130
hybrid muscle fibers 86, 126
hypothalamus 67
infrahyoid muscles 85
integrins
  isoforms 125–126
  masseter 125–126
interincisive point 43, 44
intermolar distance 167, 166–167, 186
jaw jerk/masseter reflex 76
K6-I kinesiograph 15–17, 17
K7-I kinesiograph 19, 19–20, 20
  standard deviation 19–20, 21, 22
Kawamura, Y 8
K-cells 72–73
kinesiograph 23–24
  patient positioning 24
  test protocol 24, 25
  see also individual models
lamellar (terminal) Schwann cells 72–73
lateral shift 54–55, 56
  specularity and symmetry 55
learning by imitation 63–64
Lepley, C. 55
Lewin, A. 8–9, 10, 23, 37, 43, 51, 55, 57, 112, 121
limb girdle muscular dystrophies 125
limbic system 65, 77
load, adjustment to see adjustment to load
Lund, J. P. 8
Lundeen, A. 8
Lundeen, C.C. 9, 112
malocclusion
  chewing pattern motor memory
    development 81
    cognitive assessment 64
    compensation 34
    functional imbalance 34
mandible
  bite plate actions/effects
    disengagement from occlusion 152–158, 153
    self-repositioning 152–158, 153
  border movement 31–32, 35, 135
  movement of bolus side 54–55
  mandibular kinetic motion 13–15, 16, 18
masseter
  activation, patients with normal occlusion 88, 91
  aponeurosis 85
  before/after FGB appliance therapy 133–136

  on contralateral side 88, 92
  coordinated activity 87
  electromyography 13–15, 16, 18, 24, 87, 89, 90, 88, 91
  fiber types 85–86
  functional characteristics 88
  hybrid fibers 86, 126
  imbalance, unilateral posterior crossbite 122, 123, 124
  integrins 125–126
  macroscopic characteristics 85
  motor plaques 76
  muscular activation asymmetry, molecular aspects 125–126, 127, 128
  remodeling, unilateral posterior crossbite 126
  sarcoglycans 125–126
  unilateral posterior crossbite 127, 128
masseter/jaw jerk reflex 76
mastication 37
  automatism 77–79
  bilateral coordination 32
  capacity for adjustment 30, 31, 33–34
  cognitive skill development and 64
  definition 2
  efficiency, chewing pattern height and width 54
  force, basal development and 93, 93
  functional movement 29–30, 30
  molar area 57
  motor control 30–31
  muscle coordination 87, 87–91, 89, 90
  neuromuscular control 30, 61–97, 83–86, 84
  in pathological conditions 32
  peripheral input and central network interactions 31
  physiology 28–97
  premolar area 57
  repetitivity 32
  rhythmic action 30, 31–32
  semiautomatic movement 30, 32–34
mastication (continued)
terminology 34–37
unilateral 84, 91
variability 32
see also masticatory function
masticatory function 1–27
analytical study 47
anterior crossbite effects 137–141, 139, 140
asymmetric, developing structures and 126
asymmetric adjustment 29
clinical physiopathology 2, 2–3
features 29–34
ideal conditions, appropriate treatment and 5–6, 6
maxillary growth and 116
motor memory 33, 81
neuromuscular control 61–97
phylogenetically ancient function 29
research planning 7
study of 4, 6–10
clinical experience and 7
historical aspects 7, 23–24
intrinsic difficulties 6–7
key authors 7–8
protocol 23–24
see also mastication
masticatory muscles 2
biomolecular aspects 4–5
characteristics 84–85
coordination during mastication 87, 87–91, 89, 90
fiber types 85–86
macroscopic characteristics 85
maximum clenching 83–84, 135
microscopic characteristics 85–86
morphology 4–5
nervous inputs 30
neuromuscular control 83–86, 84
rhythmic movement 84
see also individual muscles
masticatory system 99
maxillary growth, masticatory function and 116
maxillary hypoplasia 109
maximum functional intercuspation 35
dento-alveolar–basal crossbite 111
dento-alveolar crossbite 110
mechanoreceptors, periodontal see periodontal mechanoreceptors
medulla oblongata 67, 68
Merlo, A. 4
mesencephalon (midbrain) 67, 68
midbrain (mesencephalon) 67, 68
middle contact area 105
mirror neurons 63–64
mirror system 63–64
immediate repetition 63–64
mixed condition crossbites 140
mixed dentition
anterior open bite and bilateral posterior crossbite 216, 216–224
dento-alveolar crossbite 110–111
function generating bite appliance use 181
molar, first see first molar(s)
molar area 105
mastication 57
Moller, E. 7–8
motor activity, importance of 62, 62–65
motor control, feedback and feed-forward 81, 82, 83
motor cortex 63
motor homunculus 63
motor learning, mirror system 63–64
motor memory, masticatory function 33, 81
muscle spindles 75
muscular coordination 35–36
muscular dystrophies, sarcoglycans 125
muscular receptors 75, 75–76
Naeije, M. 42
Nakamura, Y. 8
nervous system 65–69, 66
motor 65
sensory 65
see also individual components
neuromuscular control 3–4
automatisms 33
mastication 30, 61–97, 84
masticatory muscles 83–86, 84
stomatognathic system 62, 62–63
neurotrophins 74
occlusal phase of closing 35
neural control 31
occlusion
- areas 57
- neural control and 3
- organic 105–106
- study of 3

opening phase
- condyle on bolus side 40
- contralateral condyle on bolus side 41
- first molar on bolus side 40
- first molar on contralateral side 40

opening reflexes 76–77
- nociceptor 77
- non-nociceptor 76–77

optionals, FGB appliance 181
- anchorage 163, 169
- organic occlusion 105–106
- orthodontic treatment, aims 146

Pacinian corpuscles 70

pain, compensation 34

palatal button, FGB appliance 168–169, 169
- expansion springs anchorage 170
- stabilization action 170
- tongue reeducation 169

palatal suture
- collagenous band formation 170
- external stimuli, new bone growth 170
- growth, hard bolus and 170–171, 171, 171–172
- histomorphological issues, FGB action 170–173
- tensile forces 166, 167

palatal vault
- FGB appliance therapy 167
- unilateral posterior crossbite 130
- palate, expansion springs action 165
- periodontal receptors 2
- parasympathetic nervous system 66
- periodontal mechanoreceptors 71–75, 72, 74
- central pattern generator, influence on 79–81
- distribution 73
- feedback 79–81
- maturation, function and 73–74
- motor control, influence on 81, 82
- occlusal load response 74
- response evoking threshold 73
- stimulus direction sensitivity 73
