About the authors xi
Preface xiii

Part 1 Tracing the past 1

1 Introducing foresight in construction: exploring the missing link of personalising futures thinking 3
   Chapter summary 3
   Setting the ‘scene’ 4
   Construction foresight studies 7
      The ‘future’ agendas since the Second World War 7
      Contemporary foresight reports at the turn of the century 9
      Synthesis of critical trends and implications from the foresight reports 16
   Critical appraisal of foresight studies 17
   A note on the methodology 22
   The structure of the book 24
      Part 1: Tracing the past 24
      Part 2: Eliciting the future 24
      Part 3: Towards an afterthought 25

2 Influential people in the UK construction industry: what makes leadership in construction? 26
   Chapter summary 26
   Introduction 27
   Leadership theories and application in construction 28
      Development of leadership theories 28
      Application of leadership theories in construction management research 30
      Looking forward but learning from the past 30
   So what makes a ‘leader’ in construction? 31
      Critical antecedent: people 31
      Critical antecedent: place 34
      Critical antecedent: events 35
      To be or not to be? The age-old question of nature and nurture 37
   Closing thoughts 41
Part 2 Eliciting the future

3 Developing a sustainable future: theoretical and practical insights into sustainable development

Connecting people, profits and planet: the rise of the sustainability agenda
- Interactions between people and places
- Role of political leaders and infrastructure development
- Industry response to the sustainable development agenda
- Role of education and research
- Summing up the thoughts of our leading figures

Sustainability: definitions and perspectives
- Man-made capital: problems with an output-driven model
- Human capital: the rhetoric versus reality of investing in people
- Natural capital: consensus gained or paradise lost
- Social capital: building trust and sustainable communities
- The measurement problem: are efforts towards sustainable development doomed to fail?

Closing thoughts

4 Connecting up government, corporate and community stakeholders in governing the future of the construction industry

Governance of the industry: seeking an institutionally coordinated response to meet the challenges of the future
- Think global act local
- The changing role of government: relinquishing control to the private sector
- Public–private interface
- People and managing relationships in construction
- Bringing interactions to the fore: exploring the intersections between government, corporate and community actors

Shifting perspectives of governance
- Political governance: governance without government
- Corporate governance: the rise of corporate social responsibility
- Community governance: revisiting social capital
- The need for joined-up governance

Governance in construction: the trends of privatisation and community engagement
- The relationship between government and construction
- Structure of the industry
Part 3  Towards an afterthought

5  The last word: synthesising lessons learnt from the journeys...

Chapter summary
Introduction
Recap on previous chapters
Leadership as an emergent process: moving away from individualistic notions of leadership in construction
The missing social link of sustainable development
The aspirations of joined-up governance
Key conclusions
Futures thinking as emergent thinking
Disrupting boundaries: the age of hybrids
Tensions, ambiguities and paradoxes
Knowledge gaps to frame the research and practice agenda of the future
Epilogue

Appendix: Brief biographies of influential figures interviewed

Alan Ritchie
Bob White
Chris Blythe
Chris Luebkeman
George Ferguson
Guy Hazelhurst
Jon Rouse
Kenneth Yeang
Kevin McCloud
Nick Raynsford
Sandi Rhys Jones
Sir Michael Latham
Stef Stefanou
Tom Bloxham
Wayne Hemingway
