## Contents

Controlling exposure, occurrence, and impact 35  
Controllable, predictable, observable, and hidden drivers 35  
Cost of decisions 36  
Risk financing 37  
Risk management programme as an influence diagram 38  
Modelling an individual risk or the risk management programme 39  
Summary 41

## 2 Tool Box 43

Probability basics 43  
Introduction to probability theory 43  
Conditional probabilities 45  
Independence 49  
Bayes’ theorem 50  
Random variables 54  
Moments of a random variable 57  
Continuous random variables 58  
Main probability distributions 62  
Introduction—the binomial distribution 62  
Overview of usual distributions 64  
Fundamental theorems of probability theory 67  
Empirical estimation 68  
Estimating probabilities from data 68  
Fitting a distribution from data 69  
Expert estimation 71  
From data to knowledge 71  
Estimating probabilities from expert knowledge 73  
Estimating a distribution from expert knowledge 74  
Identifying the causal structure of a domain 74  
Conclusion 75  
Bayesian networks and influence diagrams 76  
Introduction to the case 77  
Introduction to Bayesian networks 78  
Nodes and variables 79

Introductory example: structured funds 90  
Risk management example 1—hedging weather risk 96  
Description 96  
Collecting information 98  
Model 99
3 Quantitative Risk Assessment: A Knowledge Modelling Process

Introduction
Increasing awareness of exposures and stakes
Objectives of risk assessment
Issues in risk quantification
Risk quantification: a knowledge management process

The basel II framework for operational risk
Introduction
The three pillars
Operational risk
The basic indicator approach
The sound practices paper
The standardized approach
The alternative standardized approach
The advanced measurement approaches (AMA)
Risk mitigation
Partial use
Conclusion

Identification and mapping of loss exposures
Quantification of loss exposures
The candidate scenarios for quantitative risk assessment
The exposure, occurrence, impact (XOI) model
Modelling and conditioning exposure at peril
Summary
Modelling and conditioning occurrence
Consistency of exposure and occurrence
Evaluating the probability of occurrence
Conditioning the probability of occurrence
Summary
Modelling and conditioning impact
## Discussion 192

**Quantitative example 3 – enterprise-wide risk management** 194

**Context and objectives** 195

**Risk analysis and complex systems** 195

**An alternative definition of risk** 196

**Representation using Bayesian networks** 196

- Selection of a time horizon 197
- Identification of objectives 197
- Identification of risks (events) and risk factors (context) 198
- Structuring the network 199
- Identification of relationships (causal links or influences) 200
- Quantification of the network 200
- Example of global enterprise risk representation 200

**Usage of the model for loss control** 201

- Risk mapping 201
- Importance factors 202
- Scenario analysis 202

**Application to the risk management of an industrial plant** 203

- Description of the system 203
- Assessment of the external risks 204
- Integration of external risks in the global risk assessment 207
- Usage of the model for risk management 210

**Summary – using quantitative models for risk control** 210

### 5 Risk Financing: The Right Cost of Risks 211

#### Introduction 211

**Risk financing instruments** 212

- Retention techniques 214
- Current treatment 214
- Reserves 215
- Captives (insurance or reinsurance) 215

**Transfer techniques** 219

- Contractual transfer (for risk financing – to a noninsurer) 219
- Purchase of insurance cover 219

**Hybrid techniques** 220

- Pools and closed mutual 220
- Claims history-based premiums 222

**Choice of retention levels** 222

**Financial reinsurance and finite risks** 223

- Prospective aggregate cover 225

**Capital markets products for risk financing** 225

- Securitization 226
- Insurance derivatives 227
- Contingent capital arrangements 228

**Risk financing and risk quantifying** 230

**Using quantitative models** 231
