lower oscillation 94, 183
lower prevision, coherent see coherence (bounded gambles), for lower previsions
lower probability 41
lower S-integral 168, 169, 170, 184
lower semi-continuous 94, 95, 373
Markov kernel 134
measurability 7, 340–3
of functions 12–17
measurable 12–13, 14, 15, 162, 163
measurable bounded gamble 114
measure 11
metric 372
metric space 372–3
metrisable topological space 373
minimum preserving lower prevision 127–50
assessments on chains of sets 142–3
belief function 128–9, 139
definition and properties 127–8
distribution function 147–50
induced lower prevision 131–8
motivation 131–3
possibility and necessity measures 143–7
probability box 147–50
proper filter and 129–30
properties 134–8
refining set of possible values for random variable 139–42
special cases 138–42
Minkowski functional 200
mixture lower prevision 200, 201
Möbius inversion formula 128
monoid 192, 193, 195–7, 203–4
monotone convergence 18–19, 63–4
for integrable bounded gambles 186–7
for measurable bounded gambles 184–6
monotone function 17
monotone functional 218
monotone set function 10
Moore–Smith limit (limit) 7, 8, 9, 168–9, 313
Moore–Smith property 191, 201, 203, 204, 228
multiple hypergeometric distribution 207
multiplication of extended real numbers 2
multivalued map 132
n-alternating conjugate 102
n-monotone functional 218
n-monotone lower prevision 101–21
n-monotone lower probability 102
n-monotone set function 23
n-monotonicity 102–7
coherence and 107–13
for lower probabilities 109–13
three-element space 107–8
representation results 113–21
natural extension 137, 233, 259
of {0,1}-valued lower probabilities 82
avoiding partial/sure loss (arbitrary gambles) 283–5
avoiding partial/sure loss (bounded gambles) 67–9
coherence 65–70
for conditional lower previsions 278–87
avoiding sure loss 283–5
compatibility with definition for lower previsions in bounded gambles 286–7
equivalence and 281
as least-committal extension 280–1
simpler calculation of 285–6
specific domain, and transitivity 282–3
