**Subject Index**

Akaikie information criterion, 666, 668–669
Ansari-Bradley dispersion test, 152–169

- asymptotic relative efficiency, 200
- consistency, 167–168
- example, 157–159
- large-sample approximation, 155, 164–165
- motivation, 160
- properties, 168
- ties, 156–157, 166–167

Asymptotically distribution-free, 99, 176
Asymptotic relative efficiency:
  - independence procedures, 450
  - odds ratio procedures, 534
  - one- and paired-sample procedures, 112–114
  - one-way layout procedures, 287–288
  - regression procedures, 494
  - success probability estimators, 24, 38
  - two-sample dispersion procedures, 200–201
  - two-sample location procedures, 149–150
  - two-way layout procedures, 390–392

Balanced incomplete block designs, 332–343
Bandwidth, 624–627
  - bootstrap, 627
  - cross-validation, 625
  - effect of changing the size on density estimation, 613–614, 625
  - fixed bandwidth, 624–625
  - Nadaraya-Watson estimator, 668, 670–671
  - plug-in estimate, 625
  - variable bandwidth, 625–627
Basis functions, orthogonal, 630
Bayes estimators, 33–38, 744–762
  - binomial distribution, 33–38
  - distribution function, 746–752
  - distribution function with censored data, 755–758
  - multinomial distribution, 37–38
  - rank order estimation, 752–754
Barlow-Doksum increasing failure rate tests, 540
Behrens-Fisher problem:
  - k-sample, 211, 238, 248
  - two-sample, 145
Bernoulli trials, 11
Bias:
  - reduction by jackknife, 176–177
  - in histograms, 614–615
  - in density estimates, 623, 625
  - in kernel smoothers, 673
Bickel-Doksum increasing failure rate tests, 545
Bin width, 612, 615–616, *see also* Bandwidth
  - Freedman-Diaconis selection rule, 615
  - Scott selection rule, 615
  - Sturges selection rule, 615
Binomial confidence interval, 24–27
  - example, 25
  - large-sample approximation, 26
  - motivation, 24–27
  - properties, 24–27, 31
Binomial distribution, 16
Binomial estimator, 22
  - example, 22
  - motivation, 22
  - properties, 24
  - sample-size determination, 23
  - standard deviation, estimated, 22
Binomial test, 11–21, 68
  - consistency, 20
  - example, 13–15
  - large-sample approximation, 13
  - motivation, 16
  - power, 19–20
  - properties, 20

809
Subject Index

Bivariate distribution function:
  in bivariate symmetry problem, 103
  in independence problems, 393–394, 407
Bivariate symmetry, test for, 102–112
  Blum-Kiefer-Rosenblatt independence test, 444, 448–449
  relation to Hoeffding’s test, 444
Bohn-Wolfe ranked set sample analogue of Mann-Whitney-Wilcoxon procedure,
  717–737
  asymptotic modifications to accommodate imperfect rankings, 729
  consistence, 730
  effect of imperfect rankings, 728–729
  example, 721–722
  Fligner-MacEachern adjustment using only within-judgment ranks, 729–730
  large-sample approximation, 720, 726–727
  motivation, 722
  null distribution, 722–725
  power, 729–730
  properties, 730
  ties, 721
Bootstrap, 420–427, 627
  bandwidth selection, 627
  bias-corrected and accelerated, 425–426
  confidence interval for tau, 420–423
  estimated standard error, 423–424
  jackknife versus bootstrap, 426
  number of bootstrap replications, 426
  one-sample framework, 424–425
Boyles-Samaniego new better than used estimator, 553
Campbell-Hollander Bayes rank order estimator,
  752–755
Cascade algorithm, 634, 642–643
Censored data, 551, 578–605
  confidence bands for survival function, 585–590
  new better than used test, 590–591
  quantile function confidence bands, 591–592
  survival function estimators, 578–594
  two-sample tests, 594–601
Chen-Hollander-Langberg new better than used test for censored data, 590–591
Chi-squared test of homogeneity, 495–509
Chi-squared test of independence, 495–509
Collecting a ranked set sample, 677–681, 737–739
  balanced versus unbalanced, 738–739
  comparison with a simple random sample, 680–681
  constructive approach to obtain a balanced ranked set sample, 677–678
cost considerations, 739
example, 678–680
imperfect rankings, 737–738
multiple observations per set, 739
set size, 737
unequal set sizes, 739
Concordance, multivariate, 408
Concordant pairs, 399–400
Conditional test:
  balanced incomplete block design, 338
  bivariate symmetry, 102–112
  broad alternatives, 196–197
  center of symmetry, 50–52
  common odds ratio, 527–530
  equal means, 124–125
  equal success rates, 511–513
  equal variances, 166–167
  independence, 438–439
  odds ratio, 520
  one-way layout, 209–210, 253
  two-way layout, 299–300, 310, 338, 350–351, 359
Confidence intervals for the binomial parameter,
  24–33
  Agresti-Coull interval, 26–27
  Clopper-Pearson interval, 27
  Laplace-Wald interval, 26
  Wilson interval, 25–26
Contingency tables, 495–534
  2 x 2, 495–534
  k strata of 2 x 2 tables, 522–534
Continuity corrections:
  Edwards, 508–509
  Yates, 506
Contrasts:
  in one-way layout, 278–287
  in two-way layout, 328–331, 386–390
Correlation coefficient:
  Gripenberg partial, 419
  Kendall, 394, 399, 413–414
  Pearson, 427, 429, 431–432
  Spearman, 427, 429, 431–432, 440
Cox’s proportional hazards model, 601–602
  fitting a proportional hazards model, 602
  partial likelihood, 602
  test of the proportional hazards assumption, 602
Critchlow-Fligner simultaneous confidence intervals
  for simple contrasts in one-way layout, 282–287
  example, 283–285
  large-sample approximation, 283, 286
  motivation, 285
  properties, 286
Cross-validation methods:
  - density bandwidth selection, 625
  - generalized cross-validation, 662–663, 665–666
  - least squares, 660, 668
  - wavelet thresholding, 651, 653

Cumulative distribution function, see Distribution function

Cumulative hazard function, 585–586

Decreasing failure rate, see Failure rate

Density estimation, 609–628
  - histogram, 611–616
  - kernel estimator, 617–624
  - nearest neighbor estimator, 628
  - orthogonal series estimator, 628

Density function, 609–610

Dirichlet process, see Ferguson’s Dirichlet process

Discordant pairs, 399–499

Discrete wavelet transform, 633–637, 640
  - sample size, 634, 637, 641–643

Dispersion:
  - confidence intervals, 167, 178–179
  - estimators, 167, 178–179
  - tests, 151–190

Distribution-free, 2

Distribution function:
  - confidence bands, censored case, 586–590
  - confidence bands, uncensored case, 568–578
  - estimation of, censored case, 578–594
  - estimation of, ranked set sample, 705–706
  - estimation of, uncensored case, 191, 568–578, 610

Doksum contrast estimator in two-way layout:
  - asymptotic relative efficiency, 390–391
    - example, 329–330
    - large-sample approximation, 331
    - motivation, 330
    - properties, 331

Doksum test based on signed ranks for general alternatives in two-way layout, 370–375
  - asymptotic relative efficiency, 391
    - example, 372–374
    - large-sample approximation, 372
    - motivation, 374
    - properties, 375
    - ties, 372, 375

Durbin, Skillings-Mack test for balanced incomplete block design, 332–340
  - asymptotic relative efficiency, 391
    - example, 333–335
    - large-sample approximation, 333, 337–339
    - motivation, 335
    - properties, 339
    - ties, 333, 338

Dwass, Steel, Critchlow-Fligner one-way layout all treatments multiple comparisons, 256–265
  - asymptotic relative efficiency, 287
    - example, 257–260
    - large-sample approximation, 257, 262–263, 265
    - motivation, 260
    - properties, 265
    - ties, 257

Edwards continuity correction, 508–509

Efficiency, see Asymptotic relative efficiency

Efron bootstrap, see Bootstrap

Efron redistribute-to-the-right algorithm, 583

Empirical distribution function, 191, 610–612, 705–706
  - example, 611–612
  - in goodness-of-fit test, 572–575
  - in Kolmogorov-Smirnov test, 190–200

Epstein increasing failure rate test, 536–545
  - asymptotic relative efficiency, 605
    - example, 538–539
    - large-sample approximation, 538
    - motivation, 539–540
    - properties, 544

Equivariance, 27

Experimentwise error rate:
  - in a one-way layout, 260–261
  - in a two-way layout, 319

Exponentiality, tests of, 535–568

Failure rate, 536

Fisher exact test, 511–513
  - example, 512
  - motivation, 513
  - properties, 513

Fisher sign test, for paired replicates, 63–74
  - asymptotic relative efficiency, 113
    - confidence interval, 80–83
    - consistency, 73
    - examples, 65–66, 90–92
    - large-sample approximation, 65, 70–71, 74
    - motivation, 67
    - for one-sample data, 90–93
    - power, 71–73
    - properties, 73–74
    - sample size determination, 73
    - ties, 65, 71
Fisher-Yates-Terry-Hoeffding two-sample location test, 130–132
asymptotic relative efficiency, 150
large-sample approximation, 132
Fligner-Policello two-sample test, 145–149
asymptotic relative efficiency, 150
consistency, 149
example, 147–148
large-sample approximation, 146
motivation, 148
properties, 149
ties, 146
Fligner-Wolfe one-way layout treatments versus control test, 249–255
asymptotic relative efficiency, 287
consistency, 255
dexample, 251–252
large-sample approximation, 250
motivation, 252
properties, 255
ties, 251, 253
Friedman, Kendall-Babington Smith two-way layout test, 292–304
asymptotic relative efficiency, 390
consistency, 301
example, 293–295
large-sample approximation, 293, 300
motivation, 296
properties, 301
ties, 293, 299–300
Ferguson’s Bayes estimator of the distribution function, 746–752
Ferguson’s Dirichlet process, 745–748
Gasser-Müller kernel estimator, 673
Gehan two-sample test for censored data, 600
Gibbs sampling, 760–761
Gibbs sampling with the Dirichlet, 760–761
Goodness-of-fit tests, 29–30
exponentiality, 575
normality, 575–577
specified distribution, 572
Greenwood formula, 585
Gripenberg estimator and confidence interval for partial correlation, 419
Guess-Hollander-Proshan test for trend change in mean residual life, 563–568
dexample, 565–566
motivation, 566
power, 568
properties, 568
Halperin-Gilbert-Lachin confidence interval for $P(X < Y)$, 140–141
Hall-Wellner mean residual life confidence bands, 560–562
Hall-Wellner survival function confidence bands, 586–588
Hawkins-Kochar-Loader tests for trend change in mean residual life, 567–568
Hayter-Stone ordered alternatives multiple comparisons, one-way layout, 265–271
dexample, 267–268
large-sample approximation, 266–267, 270–271
motivation, 269
properties, 271
ties, 267
Hettmansperger-McKean-Sheather intercept estimator, 463–465
Histogram, 611–616
average shifted histogram, 616
bias, 614–615
bin width, 612, 615–616
centered, 617–618
consistency, 616
effect of changing the bandwidth, 613
equivalency to kernel density estimate, 622–623
dexamples, 613–614, 617–618
integrated mean squared error, 614–615
properties, 616
variance, 614–615
Hodges-Lehmann one-sample estimator based on Walsh averages, 56–58, 84–87
asymptotic relative efficiency, 113
dexamples, 56–57, 85–87
motivation, 57
properties, 58
standard deviation, estimated, 58, 62
Hodges-Lehmann two-sample estimator, 136–142
asymptotic relative efficiency, 150
dexample, 137
motivation, 137–138
properties, 141
standard deviation, estimated, 141, 143
Hoeffding independence test, 442–449
consistency, 449
dexample, 445–447
large-sample approximation, 444
motivation, 447–448
properties, 449
relation to Blum-Kiefer-Rosenblatt test, 448
ties, 444–445
Hollander bivariate symmetry test, 102–112
consistency, 111
dexample, 105–110
large-sample approximation, 104
motivation, 110
properties, 111
ties, 105
Hollander test based on signed ranks for ordered
alternatives in two-way layout, 376–379
asymptotic relative efficiency, 391–392
consistency, 379
example, 377–378
large-sample approximation, 376, 379
motivation, 378
properties, 379
ties, 377
Hollander two-way layout treatment versus control
multiple comparisons based on signed ranks,
382–386
asymptotic relative efficiency, 392
example, 383–384
large-sample approximation, 382–383
motivation, 384
properties, 385
ties, 383
Hollander-Peña confidence bands for survival
function, 586–588
Hollander-Prochan decreasing mean residual life
test, 555–562
asymptotic relative efficiency, 605
example, 557–558
large-sample approximation, 557
motivation, 558–559
properties, 562
Hollander-Prochan new better than used test,
545–555
asymptotic relative efficiency, 605
consistency, 554
example, 549–550
large-sample approximation, 547–548
motivation, 551
properties, 554
ties, 548

Imperfect rankings, 704, 728–729, 737–738
Incomplete block designs, 331–354
balanced, 332–343
arbitrary, 343–354
Increasing failure rate:
class, 536, 558–559
tests for, 536–545
Increasing failure rate average:
class, 540–541
tests for, 541–542
Independence:
Blum-Kiefer-Rosenblatt test of, 444, 448–449
Hoeffding test of, 442–449
in 2 x 2 contingency tables, 495–514
Kendall test of, 393–409
Spearman test of, 427–440
Initially increasing, then decreasing, mean residual
life:
class, 555
tests for, 555–562
Interquartile range, 612
Intentionally representative sampling, 742–743
Intercept estimator, 463–465
Inverse discrete wavelet transform, 637, 644–645,
647
Jackknife, 176–178
asymptotic relative efficiency, 201
dispersion confidence interval, 178–179
dispersion estimator, 178–179
dispersion test, 169–181
estimated variance of general estimator, 176–177
general confidence interval, 177
versus bootstrap, 176–177
Jaeckel-Hettmansperger-McKean test for general
multiple linear regression, 475–485
asymptotic relative efficiency, 494
example, 479–483
large-sample approximation, 478–479
motivation, 483
properties, 485
ties, 479
Jonckheere ordered alternatives test, 215–225
asymptotic relative efficiency, 287
consistency, 224
eexample, 217–219
large-sample approximation, 216, 222–223
motivation, 219
power, 223
properties, 224
ties, 216–217
Judgment post-stratification, 742
Kaplan-Meier estimator of the survival function for
censored data, 578–594
asymptotic relative efficiency, 606–607
bias, 586
certainty bands based on, 586–590
motivation, 582
properties, 592
redistribute-to-the-right algorithm, 583
self-consistency property, 583–584
tail probability estimation, 584
Kendall’s test of independence, 393–409
asymptotic relative efficiency, 450
consistency, 409
texample, 397–399
Kendall’s test of independence (Continued)
   large-sample approximation, 396, 403–405
   motivation, 399
   power, 406–407
   properties, 409
   sample-size determination, 407
   ties, 396–397, 406
   trend test, 407
Kernel density estimation, 617–624
   binned kernel estimate, 623
   consistency, 624
   effect of changing the kernel, 622–623
   effect of changing the bandwidth, 619–621
   examples, 619–622
   mean integrated squared error, 623
Kernel function, 618–619
   bandwidth, 619
   effect of changing kernel on density estimation, 622
   Epanichnikov, 621, 623, 626–627
   normal, 619
   order, 671–672
   properties, 618–619
   rectangular, 618
   triangle, 621
Kernel smoother, 667–674
   local linear kernel smoother, 662–666
   Gasser-Müller estimator, 673
   Nadaraya-Watson estimator, 667–670
   Priestly-Chao estimator, 673
   Klefsjö increasing failure rate test, 541–542
   Klefsjö increasing failure rate average test, 541–542
Kolmogorov confidence band for distribution function, 568–578
   asymptotic relative efficiency, 577, 606
   example, 570–571
   large-sample approximation, 570
   motivation, 571–572
   properties, 577
Kolmogorov goodness-of-fit test, 572–575
Kolmogorov-Smirnov test, 190–200
   asymptotic relative efficiency, 201
   consistency, 198
   example, 192–194
   large-sample approximation, 192, 197–198
   properties, 198
   ties, 192, 195–197
Koul new better than used test, 553
Kruskal-Wallis one-way layout test, 204–215
   asymptotic relative efficiency, 287
   consistency, 211–212
   example, 205–206
   large-sample approximation, 205, 210
   motivation, 206–207
   properties, 212
   ties, 205, 209–210
k-sample tests, one-way layout, 202–255
Lehmann contrast estimator in two-way layout, 386–390
   asymptotic relative efficiency, 392
   example, 387–389
   large-sample approximation, 389
   motivation, 389
   properties, 389
Lepage test for location and dispersion, 181–190
   consistency, 188
   example, 183–185
   large-sample approximation, 182, 187
   motivation, 185
   properties, 188
   ties, 182, 187–188
Li-Hollander-Mckeague-Yang quantile function
   confidence bands, 591–592
Lilliefors normality test, 575–577
Linear regression, 451–490, 662–666
   Local averaging smoother, 657–661
      bass, 657, 659–660
      cross-validation, 657–660
      example, 657–659
      span, 657–661
      windows, 659–660
   Local regression smoother, 662–666
      cross-validation, 662
      example, 662–664
      generalized cross-validation, 662
      multivariate regression, 666
      polynomial regression, 665
      properties, 666
      weighted regression, 664–665
   Location-shift function, 132
Logrank test, see Mantel two-sample test for censored data
Mack-Skillings all treatments multiple comparisons, 367–370
   equal number of replications in each treatment-block configuration, 367–370
   asymptotic relative efficiency, 391
   example, 368
   motivation, 368
   properties, 369
   ties, 367
Mack-Skillings test for randomized block design with equal number of replications per treatment-block configuration, 354–367
asymptotic relative efficiency, 391
example, 356–358
large-sample approximation, 355–356, 359
motivation, 358
properties, 364
ties, 356, 359
Mack-Wolfe umbrella alternatives test, peak known, 226–240
asymptotic relative efficiency, 287
consistency, 238
element, 228–230
large-sample approximation, 227–228, 235–238
motivation, 230–231
properties, 238
ties, 228
Mack-Wolfe umbrella alternatives test, peak unknown, 241–249
estimation of umbrella peak, 245
example, 242–244
motivation, 244
power, 247
ties, 242
Mann trend test, 407
Mann-Whitney test, see Wilcoxon rank sum test
Mantel-Haenszel estimator of common odds ratio, 531–532
asymptotic relative efficiency, 534
example, 532
Mantel-Haenszel odds ratio test for \( k \) strata of 2 x 2 tables, 522–532
element, 525–527
motivation, 527
properties, 532
Mantel two-sample test for censored data, 594–605
asymptotic relative efficiency, 608
example, 597–598
large-sample approximation, 596–597
motivation, 598–599
properties, 602
McIntyre’s concept of a ranked set sample, 676–677
McNemar dependent proportions test, 506–508
Mean residual life function, 551, 559–560
confidence bands for, 560–562
decreasing, 555
estimator, 559–560
increasing, 555
Median:
estimated standard deviation of sample median, 78
median absolute deviation estimator, 652
of a sample, 76
test for population median being a specified value, 46, 68, 84–93
Miller jackknife test for dispersion, 169–181
asymptotic relative efficiency, 201
consistency, 179
example, 172–175
motivation, 177
properties, 179
ties, 172
Modeling imperfect rankings, 737–738
Moses confidence interval for location differences, 142–145
asymptotic relative efficiency, 150
example, 143
large-sample approximation, 142
motivation, 143
properties, 144
Moses goodness-of-fit test, 198
Multinomial distribution, 27–29
estimation, 28–29, 37–38
goodness-of-fit test, 29
Multiple comparisons, one-way layout, 255–278
all treatments, 256–271
treatment versus control, 271–278

treatment versus control, 322–327, 382–386
Multiresolution analysis, 630–633, 635–639
example, 632–633, 635–637
Nadaraya-Watson estimator, 667–674
bandwidth selection, 668, 670–671
derivation, 673–674
example, 668–670
properties, 674
Nearest neighbor methods:
density estimation, 628
kernel smoother, 670–671
local averaging smoother, 657–661
local regression smoother, 662–666
Nelson-Aalen cumulative hazard function estimator, 585
Nemenyi, Damico-Wolfe one-way layout treatment versus control multiple comparisons, 271–278
asymptotic relative efficiency, 287
example, 273–274
large-sample approximation, 272–273, 277
motivation, 274
properties, 277
ties, 273
Subject Index

Nemenyi two-way layout all treatments multiple comparisons based on signed ranks, 379–382
asymptotic relative efficiency, 392
example, 380–381
large-sample approximation, 380
motivation, 381
properties, 381
ties, 380
Nemenyi, Wilcoxon-Wilcox, Miller rank sum
two-way layout treatment versus control procedures, 322–327
asymptotic relative efficiency, 390
example, 323–324
large-sample approximation, 323, 326
motivation, 325
properties, 327
ties, 323
New better than used:
class, 546
estimator, 553
tests for, 545–555
New better than used in expectation:
class, 551
tests for, 552–553
Nonparametric statistical procedures:
advantages of, 1–2
Normality, tests of, 575–577
Odds ratio, 515–534
confidence interval for common odds ratio, 531–532
confidence interval for odds ratio, 516–517
estimator, 516–521
estimator of common odds ratio, 516–521
exact conditional test that odds ratio is a specified value, 520
population, 515
test for a common odds ratio, 527–530
test that a common odds ratio equals 1, 522–533
One-sample tests, location, 84–95
population symmetry, 94–102
One-way layout, 202–288
Ordered alternatives, one-way layout, 215–225
Order restricted randomization, 742
Order statistics, in estimation of population median, 78
Orthogonal basis functions, 630
Orthogonal series, 628, 630
Page test for ordered alternatives in two-way layout, 304–315
asymptotic relative efficiency, 390
consistency, 313
example, 306–307
large-sample approximation, 305, 310–313
motivation, 307
properties, 313
ties, 306, 310
Paired replicates analyses, 39–84
Parallelism test, see Sen-Adichie parallelism test
Partial correlation, 419
confidence interval, 419
estimator, 419
Pearson’s chi-squared goodness-of-fit test, 29
Pearson test for comparing two proportions, 496–509
Pitman asymptotic relative efficiency, see Asymptotic relative efficiency
Placements, 145
Polynomial regression, 665–666, 672
Priestly-Chao kernel estimator, 673
Probability that \( X < Y \), 138–141
estimator, 138
confidence intervals, 139–141
Proportional hazards, 601–602
Quenouille-Tukey jackknife, 176–178
Quantile function, 591–592
Quasimedian, 77–78
R, computing with, 8–9
index, 791–797
Randles-Fligner-Policello-Wolfe, Davis-Quade
symmetry test, 94–102
consistency, 101–102
example, 96–99
large-sample approximation, 96, 102
motivation, 99
properties, 102
ties, 96
Randomized blocks, 289–331, 370–390
Ranked set sampling estimators, 685–717, 727–728
distribution function, 705–706
examples, 688–695, 695–704
mean, 685–717
ordered categorical probabilities, 706
population proportion, 706
variance, 704–705
Rank order estimation, 752–755
Rank sum test, see Wilcoxon rank sum test
Redistribute-to-the-right algorithm, 583
Regression, 451–494
arbitrary regression function, 490–494
confidence intervals, 460–463
estimators, 458–460, 484
intercept estimators, 463–465, 484
kernel regression smoother, 492, 667–674
local regression smoother, 493, 662–666
multiple linear, 475–490
non-rank based, 490–494, 656–675
one line, 451–466
running line smoother, 492
parallelism, 466–475
several lines, 466–490
slope estimator, 458–460
spline regression smoother, 493, 675
tests, 452–460, 466–473, 475–485
Robins-Breslow-Greenland odds ratio confidence interval, 531–532
example, 532
Samara-Randles, Fligner-Rust, Noether confidence interval for Kendall’s \( \tau \), 415–420
example, 415–417
motivation, 417
properties, 420
ties, 417
Sampling from partially rank-ordered sets, 743
Scale parameter(s), 152–153, 162–163
confidence intervals for ratio of, 167, 178–179
estimators for ratio of, 167, 178–179
tests for ratio of, 152–169, 169–181
Self-consistency property, 583–584
Sen-Adichie parallelism test, 466–475
asymptotic relative efficiency, 494
example, 468–471
large-sample approximation, 467
motivation, 471–472
properties, 473
ties, 468
Sen confidence interval for \( P(X < Y) \), 139–140
Sensory difference tests, 14–15
Sethuraman’s constructive definition of the Dirichlet process, 746
Signed rank test, see Wilcoxon signed rank test
Sign test, see Fisher sign test
Simpson paradox, 532
Skewness, 96
example, 613
left, 100
right, 100
Skillings-Mack multiple comparison procedure for balanced incomplete block designs, 341–343
asymptotic relative efficiency, 391
example, 341–342
large-sample approximation, 341, 343
motivation, 342
properties, 343
ties, 341
Skillings-Mack test for arbitrary incomplete block design, 343–354
example, 346–348
large-sample approximation, 345, 350–351
motivation, 348
properties, 351
ties, 346, 350–351
Smoothers, 490–494, 656–675
Spearman independence test, 427–440
asymptotic relative efficiency, 450
example, 430–432
large-sample approximation, 428–429, 436–438
motivation, 432
properties, 440
ties, 429–430, 438–439
Spearman rank correlation coefficient, 427, 429,
341–432, 440
Spjøtvoll contrast estimator in one-way layout, 278–282
asymptotic relative efficiency, 287
example, 279–280
large-sample approximation, 281
motivation, 281
properties, 281
Susarla-van Ryzin distribution function estimator for right-censored data, 755–758
Symmetry, 94, 103
test of bivariate symmetry, 102–112
test of population symmetry, 94–102
Tarone-Ware two-sample tests for censored data, 600
Tau, confidence interval for, 415–427
estimator of, 413–414
measure of association, 399
Theil confidence interval for slope, 460–463
asymptotic relative efficiency, 494
example, 461
large-sample approximation, 461
motivation, 462
properties, 463
Theil slope estimator, 458–460
asymptotic relative efficiency, 494
example, 458
large-sample approximation, 460
motivation, 458
properties, 459–460
Theil test for slope, 452–456
asymptotic relative efficiency, 494
consistency, 456
example, 454–456
Subject Index

Theil test for slope (Continued)
  large-sample approximation, 454
  motivation, 456
  properties, 456
  ties, 454

Thresholding, 644–651
  block, 652–653
  cross-validation, 651, 653
  examples, 645, 648–651
  hard, 646
  hybrid, 649–651
  soft, 646
  sparsity, 645
  SureShrink, 649–651, 654
  translation-invariant, 652–653
  VisuShrink, 647–651

Total-time-on-test statistic, 539–540

Trend:
  in mean residual life, 555–568
  in one-way layout effects, 215–225
  in sample, 407, 440
  in two-way layout effects, 304–313, 376–379

Triangle test, 14

Triple:
  left, 95
  right, 95

Tukey confidence interval for location, 59–63
  asymptotic relative efficiency, 113
  example, 59–60
  large-sample approximation, 59
  motivation, 60
  properties, 62

Turning point in mean residual life, 563–568
  tests when turning point known, 563–568
  tests when turning point unknown, 567–568

Two-sample tests:
  broad alternatives, 190–200
  dispersion and location, 181–190
  dispersion differences, 152–181
  location differences, 115–136, 145–149

Two-way layout, 289–392

Umbrella alternatives:
  one-way layout, 225–249
    test for, peak known, 226–240
    test for, peak unknown, 241–249

Van der Waerden two-sample location test, 130–132
  asymptotic relative efficiency, 150
  example, 131–132
  large-sample approximation, 131

Variance:
  of histogram estimates, 614–615
  tests for equality of population variances, 151–190, see also Dispersion

Walsh average, 56

Wavelets, 630–632, 637–638
  coefficients, exact, 630, 640
  Daubechies family, 630, 640
  father wavelet, 632
  Haar wavelet, 630, 632–633, 641–642
  mother wavelet, 632
  multiresolution analysis, 630–633, 635–639
  periodic, 640
  properties, 643
  resolution level, 631–632, 638

Wavelet estimation, 640–651, see also
  Thresholding

Weighted regression, 662–666, 675

Wilcoxon, Nemenyi, McDonald-Thompson rank
  sum two-way layout all treatments multiple
  comparisons, 316–322
  asymptotic relative efficiency, 390
  example, 317–318
  large-sample approximation, 316–317, 321
  motivation, 318
  properties, 321
  ties, 317

Wilcoxon rank sum test, 115–136
  asymptotic relative efficiency, 150
  consistency, 133
  examples, 119–122
