Contents

Foreword ix
Preface xi
Acknowledgments xiii

BATCHING AND FORMING

Long Term Results of Oxy Fuel Forehearth Heating Technology for
E-Glass Fibers
Christian Windhoevel, Chendhil Periasamy, George Todd, Justin Wang, Bertrand
Leroux, and Youssef Joumani 3

Glass Production Losses Originating from Contaminants in Cullet
and Raw Materials
J. Terry Fisk 15

Developing a Better Understanding of Boron Emissions from
Industrial Glass Furnaces
Andrew Zamurs, Tim Batson, David Lever, Simon Cook, and Suresh Donthu 25

New Developments of Batch Briquetting
Khaled Al Hamdan, Helko Hessenkemper, and Sven Wiltzach 33

Application of Self-Supporting Precious Metal Stirrers in the Melting
of Soda-Lime Glass
Alexander Fuchs 43

GLASS MELTING

Application of an Energy Balance Model for Improving the Energy
Efficiency of Glass Melting Furnaces
Adriaan Lankhorst, Luuk Thielen, Johan van der Dennen, and
Miriam del Hoyo Arroyo 53
Observation of Batch Melting and Glass Melt Fining and Evolved Gas Analysis
Penny Marson, Ruud Beerks, and Mathi Rongen

Thermochemical Recuperation to Increase Glass Furnace Energy Efficiency
David Rue, Aleksandr Kozlov, Mark Khinkis, and Harry Kurek

Dry Batch Optimizer—Gain All Benefits of Water-Wetting While Reducing the Drawbacks
F. Philip Yu, Tom Hughes, and Blaine Krause

MODELING, SENSING, AND CONTROL

In-Situ CO and O2 Laser Sensor for Burner Control in Glass Furnaces
A.J. Faber, M. van Kersbergen, and H. van Limpt

Radiation Impact on the Two-Dimensional Modeling of Glass Sheet Sagging and Tempering
Dominique Locheignies, Fabien Béchet, Norbert Siedow, and Philippe Morseau

An Advanced Expert Control System and Batch Imaging Software for an Improved Automatic Melter Operation
H.P.H. (Erik) Muijsenberg, Robert Bodi, Menno Elsenga, and Glenn Neff

How Can Predictive Strategies Contribute to Improved Power Management and Decreased Energy Consumption?
Rene Meuleman

How Many Chambers are Enough?—A Float Furnace Modeling Study
Matthias Lindig

Two-Dimensional Modeling of the Entire Glass Sheet Forming Process, Including Radiative Effects
Fabien Béchet, Norbert Siedow, and Dominique Locheignies

REFRACTORIES I

Hot Bottom Repairs: Global Impact, Performance Case Study and Development for the Americas
S. Cristina Sánchez Franco, Kevin Pendleton, Dennis Cawthom, and Bryn Snow

Process Improvements with Bonded Alumina Channels
Elmer Sperry and Laura Lowe
Bonded Refractories for Extreme Conditions in the Top of Regenerators 189
Rongxing Bei, Klaus Santowski, Christian Majcenovic, Goetz Hellemann, and Mathew Wheeler

New Fused Cast Refractory for Metal Line Protection 197
Olivier Bories, Isabelle Cabodi, Michel Gaubil, and Bruno Malphettes

Ancorro—Refinement Technology for Refractory in Glass Melt Contact 203
Rolf Weigand, Heiko Hessenkemper, Anne-Katrin Rössel, David Tritschel, and Romy Kühne

REFRACTORIES II

An Update on the Technological Evolution (Or Lack Thereof) of Chinese Manufacturers of Fused Cast Refractories and the Value vs. Cost Proposition 211
P. Carlo Ratto

Monolithic Crown and Its Benefits, Colloidal Silica Bonded Refractories Technology 217
Ali Farhadi, Tom Fisher, Alonso Gonzalez Rodriguez, and Mario Estrada

High Emissivity Coatings in Glass Furnaces 225
Tom Klæbo and Bill Fausey

New Recycling Solution for Refractories from Insulation Glass Furnaces 233
O. Citti, C. Linnot, T. Champion, and P. Lefrant

Furnace Repair after a Hurricane Flooding at Monterey, Mexico 245
Roberto Cabrera

Author Index 251
