  IgE antibodies causing  117–118
  mast cells and  117–118
  reasons for  118–119
  treatments for  120–121
α-defensins  105
alternative pathway  14–15, 24, 33
anaphylactic shock  16, 35, 36
anaphylatoxins  16
anaphylaxis  35
anergy/anergize  57, 93, 95, 96, 97
antibodies  
  adaptive immune system producing  77
  B cell produced  4–5, 27–29
  broadly neutralizing  114
  classes and their functions  32–37
class switching of  32, 37
  constant region of  35
  diversity  5
  functions of  6–7
  IgA  34–35, 36, 37
  IgD  32
  IgE  35–37
    allergies caused by  117–118
    IgG  34, 36
    IgM  32, 33–34, 37, 38
antibody-dependent cellular cytotoxicity (ADCC)  34
antigen presentation  42–53
  by class I MHC molecules  42–43, 43–44, 50
  by class II MHC molecules  43, 44–45, 50
to T cells  8–9
antigen presenting cells (APCs)  42, 52–53
  activated B cells as  45, 48, 52
  activated dendritic cells as  45–46, 73
  activated macrophages as  45, 47–48
  function of  45, 69
  T cell activation by  45
antigens  
  BCRs’ recognition of  29
  cognate  29, 93
  FDC displayed  73
  self  92–93, 96–97
anti-oncogene  132
APCs see antigen presenting cells
apoptosis, cell death by  68, 69
atopic individual  117
autoimmune lymphoproliferative syndrome  121
autoimmunity, conditions for  121
autophagy  90
B7  9, 45, 46, 48, 52, 58, 64, 76, 85–6
babies, newborn, immune system of  81
bacille Calmette–Guerin (BCG) injection  136
bacteria  
  commensal 103, 105–106, 108  
  Gram-negative 64, 117  
  Gram-positive 64, 117  
  *Bacteroides fragilis* 107  
basophils 118  
B cell receptors (BCRs)  
  antigen binding region of 37  
  antigen recognition by 29, 38  
  crosslinking of 29, 30, 31, 38  
  function of 6  
  heavy chain of 27–28  
  light chain of 27  
  recognition proteins of 61  
  signaling 29–30, 38, 61  
    amplification of 30, 61  
B cells  
  accessory proteins of 29  
    Igα 29  
    Igβ 29  
  activation of 30–32, 38, 61  
    CD40 in 30  
    co-stimulatory signal 30  
    polyclonal 31–32  
    T cell-independent 31, 38, 39  
    types of 30–32  
  antibodies produced by 4–5, 27–29, 36–37  
    as APCs 45, 48, 52  
    co-receptor 30  
    experienced 30  
    functions of 6, 61  
    hypermutation 95  
    immunological memory of 99, 110  
    in lymph nodes 77, 82  
    lymphoid follicles and 72–73  
    maturation of 32, 39  
    somatic hypermutation in 37  
    memory 38, 110  
    as maintained 99  
    T cell memory v. 100–101  
    virgin B cells v. 100  
plasma 74  
  production of 5–6  
  proliferation of 6  
  in secondary lymphoid organs 77  
  somatic hypermutation of 74  
  T cells v. 7, 38, 61  
  tolerance 95  
    maintenance in germinal centers of 95  
    virgin/naïve 30–31  
    activation of 31  
BCRs see B cell receptors  
β2-microglobulin 8, 42, 50  
*Bifidobacterium* 107  

**Bifidobacterium breve** 107  
blood cell cancer 132  
blood cells, cancerous 135–136  
bone marrow  
  B cells in 31  
  NK cells in 21  
    as primary lymphoid organ 72  
broadly neutralizing antibodies 114  

C3 molecules 14  
C3a 16  
C3b 14, 15  
C5a 19  
Canale–Smith syndrome 121  
cancer  
  blood-cell 132–133, 135–136  
  causes of 131–132  
  as control system problem 131–132  
  immune surveillance against 133–137  
  non-blood-cell (solid) 132, 133, 134–135  
  spontaneous 133, 134–135  
  virus-associated 133, 136  
    vaccination to prevent 137–138  
cancer cells, classifications of 132–133  
carcinogen 132  
carcinomas 132  
CD1 presentation of lipids 50  
CD3, TCRs and 57  
CD4, HIV-1 and 128–129  
CD28, B7 binding to 85  
CD40 38, 106

immune surveillance and 136–137
as quick acting 137
target recognition by 22
natural regulatory T cells (nTregs) 93, 123
necrosis, cell death by 68, 136
negative selection 90, 91–92, 96
neutralizing antibody 7, 114
neutrophils 3
activation of 18
in blood 17–18
chemicals produced by 18
cytokines and 18
f-met peptides and 19
function of 19–20
macrophages’ cooperation with 23
as professional phagocytes 24
NK cells see natural killer (NK) cells
NKT cells
  function of 56
  maturation of 56
  receptors expressed by 56
non-blood cell cancer 132
obesity 103
omalizumab 120
oncogene 132
opportunistic infections 128
opsonization 7
  AIDS viruses 129
  BCR signaling 29–30, 61, 95
  FDCs 95
  IgG antibodies 34, 65
  innate immune system 16, 23
  lymphoid follicle 73, 74
  secondary lymphoid organs 75, 78
organs, transplant of 50–51
  see also primary lymphoid organs; secondary lymphoid organs
osteosarcoma 132
p53 protein 132
PALS see periarteriolar lymphocyte sheath
pathogen 11–12
pathogen-associated molecular patterns (PAMPs) 20
pattern-recognition receptors (PRRs) 20
PD-1L 85
peptides 42
  class I MHC and 43–44
  class II MHC and 43
  f-met 19
perforin 68
periarteriolar lymphocyte sheath (PALS) 79
peripheral tolerance 93
peripheral tolerance induction 93
pertussis, vaccine 112
Peyer’s patch 77–78, 108
  antigen entering 78
  function of 78, 82
  T cells in 80
phagocytes 25
  Fc receptors of 7
  professional 16–20, 24
  complement system working with 23
  see also macrophages; neutrophils
phagocytosis, of macrophage 2
phagosome, of macrophage 2
phosphatidylserine 136
plasmacytoid dendritic cell (pDC) 21
poliovirus vaccine 111, 112
polyclonal activation 31–32
polysaccharide A 107
positive selection see MHC restriction
primary lymphoid organs 72
productive rearrangement of gene segments 28
professional phagocytes 4
programmed death 1 (PD-1) 85, 86, 135
proliferation 6
proteasomes 51
  APCs and 43–44
  function of 43–44
protectin (CD59) 15
proto-oncogene 132
RAG1 55
RAG2 55
receptor editing 95
regulatory cells 7, 8
restraint of immune system 84–86
retinoic acid 106
rheumatic heart disease 122
rheumatoid arthritis 124
rubella vaccine 112
Salmonella 108
sarcomas 132
SCIDS see severe combined immunodeficiency syndrome
secondary lymphoid organs 10
  B cells in 77
  high endothelial venule feature of 74
  invaders intercepted by 79
  logic of 79–80
  lymph nodes as 73, 74–77
  lymphocytes in, compartmentalization of 82
  lymphocyte trafficking and 72–83
  lymphoid follicles and 72–74
  mucosal-associated lymphoid tissue as 72, 77
  spleen as 72, 74
  tolerance induction in 93
sectin (SEL) 18
selectin ligand (SLIG) 18
self-tolerance 11, 88–96
sepsis 117
severe combined immunodeficiency syndrome (SCIDS) 126
short-lived plasma B cell 99
single positive (SP) cell 90
SLIG see selectin ligand
small intestine 104, 105
smallpox, vaccination 4
solid tumors 132
somatic hypermutation
  antigen-binding region of BCRs changed by 37
  of B cells 74
  in B cells' maturation 37
  function of 38–39
specific immunotherapy 121
spleen 74
  function of 78, 82
  as secondary lymphoid organ 72
spontaneous cancer 132
stem cells
  blood cell types coming from 3
  as self-renewing 3
sterilization 127

T cell-dependent activation 30
T cell-independent activation 30
T cell receptors (TCRs) 7
  αβ 55
  CD3 and 57
  features of 57, 61
  γδ 55, 56
  MHC–peptide complex binding with 59
  recognition proteins of 61
  signals from 56–57, 61
  structure of 55
T cells
  activated, cellular adhesion molecules expressed by 80
  activation of 45, 55–62, 61, 69
  APCs 45
  AICD and 86
  antigen presentation to 8–9
  antigen recognition by 56–57
    CD4/CD8 receptors in 57–58
  APCs' adhesion to 59
  B cells v. 7, 38, 61
  clonal selection and 7
  co-receptors of 61
  co-stimulating signal received by 45
  cytokines and 55–62
  death of 11
    activation-induced 94
    effector 100
  functions of 63
  immune system turned off and 84, 85
  immunological memory 99–100, 110
  importance of 7
  intestinal invaders and 105
  in lymph nodes 82
  maturation of 58
  memory
    B cell memory v. 100–101
    as maintained 99
  memory helper 110–111
  non-traditional 56
  positive selection of 91, 96
  production of 7
  regulatory 93
    inducible (iTregs) 84–85, 93
  self-tolerance of 91–92
    learned in thymus 88
  traditional 55, 56
  virgin/naïve 96–97
    co-stimulation of 58
  DCs activating 46, 47
  traffic patterns of 93
see also helper T cells; killer T cells
TAP1 43
TAP2 43
TCRs see T cell receptors
TGFβ 107
  in intestinal inflammatory response 108
Th cells see helper T cells
thymic dendritic cell 91, 92, 96
thymus
  as primary lymphoid organ 72
  regulatory T cells generated in 93
  self-tolerance of T cells learned in 88–89
  tolerance induction in 90–91
tissue-specific proteins 90
TLRs see Toll-like receptors
TNF see tumor necrosis factor
tolerance of self 11, 88–96
 tolerize 92, 95, 97
Toll-like receptors (TLRs) 20
  on/in dendritic cells 46
  patterns recognized by 46
  TLR4 20
  TLR5 108
  TLR7 20
  TLR9 20
toxoid 112
tuberculin protein 67
tuberculosis 114
tumors
  solid 132, 133, 134–135
  spontaneous 134–135
  virus-associated 136
type I interferons 21
ulcerative colitis 103, 108

vaccines 110–115
  adjuvant 113
  AIDS 111, 113–114
  attenuated 112–113
  carrier 113, 114
  development 111–113
  diphtheria 110, 112
  hepatitis B 112
  measles, rubella, and mumps 112
  non-infectious 111–112
  pertussis 111
  poliovirus 111, 112

smallpox 4
  for virus-associated cancer 137–138
villi 104
viral load 127
virgin B cells 30
virgin (naive) lymphocytes see under B cells;
  T cells
virus-associated cancer 132
viruses
  antibodies in attack by 7
  cancer associated with 133
  entry of 7
  IgG neutralized 34
  mutating 27
