Earthquake hazard assessment

- forecasting weather analogy with, 135–36, 135f, 136f
- Fukushima in, 106
- historic earthquake records in, 137
- Japanese example of, 126, 127f, 128f
- mapping challenge with, 126–28, 130f, 131f, 131t
- maximum magnitude in, 133–35, 134f, 135f
- model of probability increases with time, 137
- next earthquake prediction in, 136–39, 136f, 137f, 138f, 139f
- North Africa example in, 130–31, 132f, 133f
- paradox of, 125–26, 127f, 128f, 129f
- plate tectonics knowledge with poor, 123–45
- PSHA algorithm in, 125
- seismic gap concept in, 125
- seismic hazard maps in, 125, 129f
- space-time variability in, 130–33, 132f, 133f
- suggested approaches for
  - assess map performance, 140–41, 143f
  - assess uncertainty estimates, 140, 141f, 142f
  - develop methods for updating maps, 141–44, 144f
  - incorporate uncertainty, 144–45, 144f
  - time-dependent recurrence model in, 137
- Tohoku earthquake in, 124, 126, 127f, 131, 133, 135
- uncertainties in, 128–30, 131t
- variability in recurrence intervals for, 137f

Earthquakes

- continental transform fault seismicity and, 66–67, 66f
- convergent margins with, 82–83, 83f
- El Asnam, 131, 132f
- greatest magnitude, 88t, 90f, 92
- Kant's understanding of, 2
- Lisbon earthquake of 1755, 1–2
- logical reasoning to understand causes of, 2
- magnitude of, 82
- magnitudes of, 6
- megathrust, 83, 102
- oceanic transform fault seismicity and, 67–68
- plate boundaries and associated, 6, 79
- Rat Islands archipelago 2014, 149–65, 150f, 151f, 153f, 156f–163f
- recent history of, 87–93, 88t, 90f
- Richter scale of, 82
- rifts with synrift, 25–26
- San Francisco, 124
- Sanrikuoki, 149
- seismogenic zone of, 82, 83f
- subduction-related, 82, 101–19, 102f, 103t–104t, 104f, 105f, 106f, 107f, 110f, 111f, 113f, 114f, 115f, 116f, 117f
- ten deadliest, 88t, 92
