INDEX

A
- Adhesion forces, experiments on, 76–83
  - capillary forces, 79–81
  - electrostatic forces, 81–83
  - glass substrate, 77
  - polystyrene substrate, 77
  - pull-off forces, 76–79
  - van der Waals forces, 76–79
- Adhesion models, 2–3
- Adhesion ratio at interfaces \( \frac{\Gamma}{\Gamma_1} \), 146–150
  - modifying methods, 149
  - blowing effect, 150
  - contact area, 149
  - electrostatic effect, 149
  - material at the interfaces, 149
  - presence of a meniscus at the interface, 149
  - roughness, 149
  - suction effect, 150
  - points to consider, 148
  - contact characteristics, 148
  - external forces applied to the microobject, 148
  - forces at interfaces, 148
  - ‘gripper/substrate’ relative movement, 148
- Adhesion-based micromanipulation, 150–159,
  - See also Adhesion ratio at interfaces \( \frac{\Gamma}{\Gamma_1} \)
  - behavior of microobject, 157–159
  - constraints at interfaces, 151–152

Rolling and pivoting thresholds, 154–157
- separation threshold, 152–153
- sliding threshold, 153–154
- Adhesive substrate, release on, 213–221,
  - See also under Submerged medium

Air and liquid, theoretical comparison between, 68–70
- electrostatic forces, 69–70
- surface forces, 68–69
- van der Waals forces, 69

Ambient environment
  - for robotic microhandling, 122–123
  - for self-assembly, 123
- Asymptotic model, 43
- Atomic force microscope (AFM)-based measurements, 74–76, 85
  - approach-and-retract cycle, 74–75
  - description, 74
  - method, 74–76
  - roughness measurement, 85
  - submerged medium, 204–206
- Automated microassembly, 253–254, See also High-yield automated MEMS assembly compliant microassembly, 254

B
- Behavior of microobject, 157–159
- Bond number, 30

between sphere and volume element, 9–11
between two spheres, 11–12
between an infinite half-space and rectangular box, 14–17
microworld modeling for, 5–6
between a sphere and infinite half-space, 14
between two spheres, 12–14
van der Waals gripper, 113
van der Waals Lifshitz interactions, 66
Variation method, 97
Vibration feeding, 119–120
Vibration release technique, 113–114
Vision measurement, in desktop microassembly machine design, 282–283

X
Weierstrass–Mandelbrot (WM) function, 90, 94, 98–100
Westegaard model, 35
Wettability, 18

Y
XDLVO model, 66–67
Young–Dubre equation, 18

Z
Zyvex connector, 260–261
