Preface xvii
List of Abbreviations xix
Notations xxi

1 Introduction 1
1.1 Engineering Background of Robust Control 1
1.2 Methodologies of Robust Control 4
   1.2.1 Small-Gain Approach 5
   1.2.2 Positive Real Method 5
   1.2.3 Lyapunov Method 6
   1.2.4 Robust Regional Pole Placement 6
   1.2.5 Gain Scheduling 7
1.3 A Brief History of Robust Control 8

2 Basics of Linear Algebra and Function Analysis 10
2.1 Trace, Determinant, Matrix Inverse, and Block Matrix 10
2.2 Elementary Linear Transformation of Matrix and Its Matrix Description 12
2.3 Linear Vector Space 14
   2.3.1 Linear Independence 15
   2.3.2 Dimension and Basis 16
   2.3.3 Coordinate Transformation 18
2.4 Norm and Inner Product of Vector 18
   2.4.1 Vector Norm 19
   2.4.2 Inner Product of Vector 20
2.5 Linear Subspace 22
   2.5.1 Subspace 22
### 3.3.2 Interior Point Method Based on Central Path
Exercises
Notes and References

### 4 Fundamentals of Linear System

#### 4.1 Structural Properties of Dynamic System
- **4.1.1 Description of Linear System**
- **4.1.2 Dual System**
- **4.1.3 Controllability and Observability**
- **4.1.4 State Realization and Similarity Transformation**
- **4.1.5 Pole**
- **4.1.6 Zero**
- **4.1.7 Relative Degree and Infinity Zero**
- **4.1.8 Inverse System**
- **4.1.9 System Connections**

#### 4.2 Stability
- **4.2.1 Bounded-Input Bounded-Output Stability**
- **4.2.2 Internal Stability**
- **4.2.3 Pole–Zero Cancellation**
- **4.2.4 Stabilizability and Detectability**

#### 4.3 Lyapunov Equation
- **4.3.1 Controllability Gramian and Observability Gramian**
- **4.3.2 Balanced Realization**

#### 4.4 Linear Fractional Transformation

### 5 System Performance

#### 5.1 Test Signal
- **5.1.1 Reference Input**
- **5.1.2 Persistent Disturbance**
- **5.1.3 Characteristic of Test Signal**

#### 5.2 Steady-State Response
- **5.2.1 Analysis on Closed-Loop Transfer Function**
- **5.2.2 Reference Tracking**
- **5.2.3 Disturbance Suppression**

#### 5.3 Transient Response
- **5.3.1 Performance Criteria**
- **5.3.2 Prototype Second-Order System**
- **5.3.3 Impact of Additional Pole and Zero**
- **5.3.4 Overshoot and Undershoot**
- **5.3.5 Bandwidth and Fast Response**

#### 5.4 Comparison of Open-Loop and Closed-Loop Controls
- **5.4.1 Reference Tracking**
- **5.4.2 Impact of Model Uncertainty**
- **5.4.3 Disturbance Suppression**
### 6 Stabilization of Linear Systems

6.1 State Feedback
- 6.1.1 Canonical Forms
- 6.1.2 Pole Placement of Single-Input Systems
- 6.1.3 Pole Placement of Multiple-Input Systems*  
- 6.1.4 Principle of Pole Selection

6.2 Observer
- 6.2.1 Full-Order Observer
- 6.2.2 Minimal Order Observer

6.3 Combined System and Separation Principle
- 6.3.1 Full-Order Observer Case
- 6.3.2 Minimal Order Observer Case

Exercises
Notes and References

### 7 Parametrization of Stabilizing Controllers

7.1 Generalized Feedback Control System
- 7.1.1 Concept
- 7.1.2 Application Examples

7.2 Parametrization of Controllers
- 7.2.1 Stable Plant Case
- 7.2.2 General Case

7.3 Youla Parametrization

7.4 Structure of Closed-Loop System
- 7.4.1 Affine Structure in Controller Parameter
- 7.4.2 Affine Structure in Free Parameter

7.5 2-Degree-of-Freedom System
- 7.5.1 Structure of 2-Degree-of-Freedom Systems
- 7.5.2 Implementation of 2-Degree-of-Freedom Control

Exercises
Notes and References

### 8 Relation between Time Domain and Frequency Domain Properties

8.1 Parseval’s Theorem
- 8.1.1 Fourier Transform and Inverse Fourier Transform
- 8.1.2 Convolution
- 8.1.3 Parseval’s Theorem
- 8.1.4 Proof of Parseval’s Theorem

8.2 KYP Lemma
- 8.2.1 Application in Bounded Real Lemma
- 8.2.2 Application in Positive Real Lemma
- 8.2.3 Proof of KYP Lemma*
9 Algebraic Riccati Equation
9.1 Algorithm for Riccati Equation
9.2 Stabilizing Solution
9.3 Inner Function

Exercises
Notes and References

10 Performance Limitation of Feedback Control
10.1 Preliminaries
   10.1.1 Poisson Integral Formula
   10.1.2 All-Pass and Minimum-Phase Transfer Functions
10.2 Limitation on Achievable Closed-loop Transfer Function
   10.2.1 Interpolation Condition
   10.2.2 Analysis of Sensitivity Function
10.3 Integral Relation
   10.3.1 Bode Integral Relation on Sensitivity
   10.3.2 Bode Phase Formula
10.4 Limitation of Reference Tracking
   10.4.1 1-Degree-of-Freedom System
   10.4.2 2-Degree-of-Freedom System

Exercises
Notes and References

11 Model Uncertainty
11.1 Model Uncertainty: Examples
   11.1.1 Principle of Robust Control
   11.1.2 Category of Model Uncertainty
11.2 Plant Set with Dynamic Uncertainty
   11.2.1 Concrete Descriptions
   11.2.2 Modeling of Uncertainty Bound
11.3 Parametric System
   11.3.1 Polytopic Set of Parameter Vectors
   11.3.2 Matrix Polytope and Polytopic System
   11.3.3 Norm-Bounded Parametric System
   11.3.4 Separation of Parameter Uncertainties
11.4 Plant Set with Phase Information of Uncertainty
11.5 LPV Model and Nonlinear Systems
   11.5.1 LPV Model
   11.5.2 From Nonlinear System to LPV Model
11.6 Robust Stability and Robust Performance

Exercises
Notes and References
12 Robustness Analysis 1: Small-Gain Principle  
12.1 Small-Gain Theorem  
12.2 Robust Stability Criteria  
12.3 Equivalence between $\mathcal{H}_\infty$ Performance and Robust Stability  
12.4 Analysis of Robust Performance  
12.4.1 Sufficient Condition for Robust Performance  
12.4.2 Introduction of Scaling  
12.5 Stability Radius of Norm-Bounded Parametric Systems  
Exercises  
Notes and References  

13 Robustness Analysis 2: Lyapunov Method  
13.1 Overview of Lyapunov Stability Theory  
13.1.1 Asymptotic Stability Condition  
13.1.2 Condition for State Convergence Rate  
13.2 Quadratic Stability  
13.2.1 Condition for Quadratic Stability  
13.2.2 Quadratic Stability Conditions for Polytopic Systems  
13.2.3 Quadratic Stability Condition for Norm-Bounded Parametric Systems  
13.3 Lur’e System  
13.3.1 Circle Criterion  
13.3.2 Popov Criterion  
13.4 Passive Systems  
Exercises  
Notes and References  

14 Robustness Analysis 3: IQC Approach  
14.1 Concept of IQC  
14.2 IQC Theorem  
14.3 Applications of IQC  
14.4 Proof of IQC Theorem*  
Notes and References  

15 $\mathcal{H}_2$ Control  
15.1 $\mathcal{H}_2$ Norm of Transfer Function  
15.1.1 Relation with Input and Output  
15.1.2 Relation between Weighting Function and Dynamics of Disturbance/Noise  
15.1.3 Computing Methods  
15.1.4 Condition for $\|G\|_2 < \gamma$  
15.2 $\mathcal{H}_2$ Control Problem  
15.3 Solution to Nonsingular $\mathcal{H}_2$ Control Problem  
15.4 Proof of Nonsingular Solution  
15.4.1 Preliminaries  
15.4.2 Proof of Theorems 15.1 and 15.2  
15.5 Singular $\mathcal{H}_2$ Control  

xii
15.6 Case Study: $\mathcal{H}_2$ Control of an RTP System 337
  15.6.1 Model of RTP 337
  15.6.2 Optimal Configuration of Lamps 340
  15.6.3 Location of Sensors 340
  15.6.4 $\mathcal{H}_2$ Control Design 340
  15.6.5 Simulation Results 341
Exercises 342
Notes and References 345

16 $\mathcal{H}_\infty$ Control 346
  16.1 Control Problem and $\mathcal{H}_\infty$ Norm 346
    16.1.1 Input–Output Relation of Transfer Matrix’s $\mathcal{H}_\infty$ Norm 346
    16.1.2 Disturbance Control and Weighting Function 347
  16.2 $\mathcal{H}_\infty$ Control Problem 348
  16.3 LMI Solution 1: Variable Elimination 349
    16.3.1 Proof of Theorem 16.1 350
    16.3.2 Computation of Controller 351
  16.4 LMI Solution 2: Variable Change 351
  16.5 Design of Generalized Plant and Weighting Function 352
    16.5.1 Principle for Selection of Generalized Plant 352
    16.5.2 Selection of Weighting Function 353
  16.6 Case Study 354
  16.7 Scaled $\mathcal{H}_\infty$ Control 355
Exercises 358
Notes and References 359

17 $\mu$ Synthesis 360
  17.1 Introduction to $\mu$ 360
    17.1.1 Robust Problems with Multiple Uncertainties 360
    17.1.2 Robust Performance Problem 363
  17.2 Definition of $\mu$ and Its Implication 364
  17.3 Properties of $\mu$ 365
    17.3.1 Special Cases 365
    17.3.2 Bounds of $\mu(M)$ 366
  17.4 Condition for Robust $\mathcal{H}_\infty$ Performance 368
  17.5 D–K Iteration Design 369
    17.5.1 Convexity of the Minimization of the Largest Singular Value 370
    17.5.2 Procedure of D–K Iteration Design 370
  17.6 Case Study 371
Exercises 373
Notes and References 374

18 Robust Control of Parametric Systems 375
  18.1 Quadratic Stabilization of Polytopic Systems 375
    18.1.1 State Feedback 375
    18.1.2 Output Feedback 376
18.2 Quadratic Stabilization of Norm-Bounded Parametric Systems
18.3 Robust $H_\infty$ Control Design of Polytopic Systems
18.4 Robust $H_\infty$ Control Design of Norm-Bounded Parametric Systems
Exercises

19 Regional Pole Placement
19.1 Convex Region and Its Characterization
  19.1.1 Relationship between Control Performance and Pole Location
  19.1.2 LMI Region and Its Characterization
19.2 Condition for Regional Pole Placement
19.3 Composite LMI Region
19.4 Feedback Controller Design
  19.4.1 Design Method
  19.4.2 Design Example: Mass–Spring–Damper System
19.5 Analysis of Robust Pole Placement
  19.5.1 Polytopic System
  19.5.2 Norm-Bounded Parametric System
19.6 Robust Design of Regional Pole Placement
  19.6.1 On Polytopic Systems
  19.6.2 Design for Norm-Bounded Parametric System
  19.6.3 Robust Design Example: Mass–Spring–Damper System
Exercises
Notes and References

20 Gain-Scheduled Control
20.1 General Structure
20.2 LFT-Type Parametric Model
  20.2.1 Gain-Scheduled $H_\infty$ Control Design with Scaling
  20.2.2 Computation of Controller
20.3 Case Study: Stabilization of a Unicycle Robot
  20.3.1 Structure and Model
  20.3.2 Control Design
  20.3.3 Experiment Results
20.4 Affine LPV Model
  20.4.1 Easy-to-Design Structure of Gain-Scheduled Controller
  20.4.2 Robust Multiobjective Control of Affine Systems
20.5 Case Study: Transient Stabilization of a Power System
  20.5.1 LPV Model
  20.5.2 Multiobjective Design
  20.5.3 Simulation Results
  20.5.4 Robustness
  20.5.5 Comparison with PSS
Exercises
Notes and References
## 21 Positive Real Method

21.1 Structure of Uncertain Closed-Loop System 436
21.2 Robust Stabilization Based on Strongly Positive Realness 438
  21.2.1 Variable Change 439
  21.2.2 Variable Elimination 440
21.3 Robust Stabilization Based on Strictly Positive Realness 441
21.4 Robust Performance Design for Systems with Positive Real Uncertainty 442
21.5 Case Study 445
  Exercises 448
  Notes and References 449

### References 450

### Index 455

The sections and chapters marked by * require relatively high level mathematics and may be skipped in the first reading, which does not affect the understanding of the main body.
