## CONTENTS

2.3 Least cost opportunistic routing

2.3.1 Expected opportunistic transmission count (EOTX)

2.3.2 End-to-end cost of opportunistic routing

2.3.3 Properties of LCOR

2.3.4 Dijkstra-based algorithm

2.3.5 Bellman – Ford-based algorithm

2.4 Conclusions

References

3 Energy efficiency of geographic opportunistic routing

3.1 EGOR problem formulation

3.1.1 Energy consumption model

3.1.2 Tradeoff between EPA and energy consumption

3.2 Efficient localized node-selection algorithms

3.2.1 Reformulate the node-selection optimization problem

3.2.2 Efficient node-selection algorithms

3.3 Energy-efficient geographic opportunistic routing

3.4 Performance evaluation

3.4.1 Simulation setup

3.4.2 Simulation results and analysis

3.5 Conclusion

References

4 Capacity of multirate opportunistic routing

4.1 Computing throughput bound of OR

4.1.1 Transmission interference and conflict

4.1.2 Concurrent transmission sets

4.1.3 Effective forwarding rate

4.1.4 Lower bound of end-to-end throughput of OR

4.1.5 Maximum end-to-end throughput of OR

4.1.6 Multi-flow generalization

4.2 Impact of transmission rate and forwarding strategy on throughput

4.3 Rate and candidate selection schemes

4.3.1 Least medium time opportunistic routing

4.3.2 Per-hop greedy: most advancement per unit time

4.4 Performance evaluation

4.4.1 Simulation setup

4.4.2 Impact of source–destination distances

4.4.3 Impact of forwarding candidate number

4.4.4 Impact of node density

4.5 Conclusion

5 Multiradio multichannel opportunistic routing

5.1 Introduction
5.2 System model and opportunistic routing primer 91
  5.2.1 Opportunistic routing primer 92
5.3 Problem formulation 93
  5.3.1 Concurrent transmission sets 93
  5.3.2 Effective forwarding rate 95
  5.3.3 Capacity region of an opportunistic module 96
  5.3.4 Maximum end-to-end throughput in multiradio, multichannel, multihop networks with OR capability 96
5.4 Forwarding priority scheduling 98
  5.4.1 A scheduling based on LP 99
  5.4.2 A heuristic scheduling 99
5.5 Performance evaluation 104
  5.5.1 Two scenarios with different link qualities 104
  5.5.2 Simulation of random networks 106
5.6 Conclusions and future work 108
References 108

6 Medium access control for opportunistic routing – candidate coordination 111
  6.1 Existing candidate coordination schemes 112
    6.1.1 GeRaF collision avoidance MAC 112
    6.1.2 ExOR batch-based MAC 114
    6.1.3 Contention-based forwarding (CBF) 115
    6.1.4 Slotted acknowledgment (SA) 117
    6.1.5 Compressed slotted acknowledgment (CSA) 118
  6.2 Design and analysis of FSA 119
    6.2.1 Design of FSA 119
    6.2.2 Analysis 120
    6.2.3 More on channel assessment techniques 122
  6.3 Simulation results and evaluation 122
    6.3.1 Simulation setup 123
    6.3.2 Simulation results and evaluation 125
  6.4 Conclusions 132

7 Integration of opportunistic routing and network coding 133
  7.1 A brief review of MORE 134
  7.2 Mobile content distribution in VANETs 137
    7.2.1 Model and assumptions 138
  7.3 Related works on mobile content distribution in VANETs 140
    7.3.1 Cooperative downloading of general contents in VANETs 140
    7.3.2 Streaming of multimedia content in VANETs 142
  7.4 Background on symbol-level network coding 143
    7.4.1 A brief review of SLNC 143
    7.4.2 Motivation: why VANET content distribution benefits from SLNC 145
7.5 CodeOn: a cooperative popular content broadcast scheme for VANETs based on SLNC 152

7.5.1 Design objectives 152
7.5.2 Design overview 152
7.5.3 Network coding method 154
7.5.4 Efficient exchange of content reception status 155
7.5.5 Distributed relay selection in cooperative PCD 156
7.5.6 Broadcast content scheduling 159
7.5.7 Performance evaluation 160
7.5.8 Simulation results 161

7.6 CodePlay: a live multimedia streaming scheme for VANETs based on SLNC 171

7.6.1 Design objectives 172
7.6.2 Overview of codeplay 172
7.6.3 LMS using symbol-level network coding 175
7.6.4 Coordinated and distributed relay selection 176
7.6.5 Transmission coordination of relays 179
7.6.6 OLRR: opportunistic LRR scheduling for sparse VANETs 179
7.6.7 Performance evaluation 181

7.7 Conclusion 188
