CHAPTER 1
The Volatility Problem 1
  Introduction 1
  The Stock Market 2
    The Stock Price Process 2
    Historic Volatility 3
  The Derivatives Market 5
    The Black-Scholes Approach 5
    The Cox Ross Rubinstein Approach 7
  Jump Diffusion and Level-Dependent Volatility 8
    Jump Diffusion 8
    Level-Dependent Volatility 11
  Local Volatility 14
    The Dupire Approach 14
    The Derman Kani Approach 17
    Stability Issues 18
    Calibration Frequency 19
  Stochastic Volatility 21
    Stochastic Volatility Processes 21
    GARCH and Diffusion Limits 22
| CONTENTS |
|-----------------|--------|
| The Pricing PDE under Stochastic Volatility | 26 |
| The Market Price of Volatility Risk | 26 |
| The Two-Factor PDE | 27 |
| The Generalized Fourier Transform | 28 |
| The Transform Technique | 28 |
| Special Cases | 30 |
| The Mixing Solution | 32 |
| The Romano Touzi Approach | 32 |
| A One-Factor Monte-Carlo Technique | 34 |
| The Long-Term Asymptotic Case | 35 |
| The Deterministic Case | 35 |
| The Stochastic Case | 37 |
| A Series Expansion on Volatility-of-Volatility | 39 |
| Local Volatility Stochastic Volatility Models | 42 |
| Stochastic Implied Volatility | 43 |
| Joint SPX and VIX Dynamics | 45 |
| Pure-Jump Models | 47 |
| Variance Gamma | 47 |
| Variance Gamma with Stochastic Arrival | 51 |
| Variance Gamma with Gamma Arrival Rate | 53 |

**CHAPTER 2**

The Inference Problem | 55
---|---
Introduction | 55
Using Option Prices | 58
Conjugate Gradient (Fletcher-Reeves-Polak-Ribiere) Method | 59
Levenberg-Marquardt (LM) Method | 59
Direction Set (Powell) Method | 61
Numeric Tests | 62
The Distribution of the Errors | 65
Using Stock Prices | 65
The Likelihood Function | 65
Filtering | 69
The Simple and Extended Kalman Filters | 72
The Unscented Kalman Filter | 74
Kushner’s Nonlinear Filter | 77
Parameter Learning | 80
Parameter Estimation via MLE | 95
Diagnostics | 108
Particle Filtering | 111
Comparing Heston with Other Models | 133
## Contents

- The Performance of the Inference Tools 141
- The Bayesian Approach 158
- Using the Characteristic Function 172
- Introducing Jumps 174
- Pure-Jump Models 184

**Recapitulation** 201
- Model Identification 201
- Convergence Issues and Solutions 202

### CHAPTER 3

**The Consistency Problem** 203
- Introduction 203
- The Consistency Test 206
  - The Setting 206
  - The Cross-Sectional Results 206
  - Time-Series Results 209
- Financial Interpretation 210
- The “Peso” Theory 214
  - Background 214
  - Numeric Results 215
- Trading Strategies 216
  - Skewness Trades 216
  - Kurtosis Trades 217
  - Directional Risks 217
  - An Exact Replication 219
  - The Mirror Trades 220
  - An Example of the Skewness Trade 220
  - Multiple Trades 225
  - High Volatility-of-Volatility and High Correlation 225
- Non-Gaussian Case 230
  - VGSA 232
- A Word of Caution 236
- Foreign Exchange, Fixed Income, and Other Markets 237
  - Foreign Exchange 237
  - Fixed Income 238

### CHAPTER 4

**The Quality Problem** 241
- Introduction 241
- An Exact Solution? 241
  - Nonlinear Filtering 242
  - Stochastic PDE 243
Wiener Chaos Expansion 244
First-Order WCE 247
Simulations 248
Second-Order WCE 251
Quality of Observations 251
  Historic Spot Prices 252
  Historic Option Prices 252
Conclusion 262

Bibliography 263
