Alveolar boundary conditions (continued)
complex cases, 309
  camouflage treatment of compensated
dentoalveolar structures, 310, 311, 312, 313
cleft lip and palate, 310–312
dilacerated teeth, 310
dynamism of, 293
inadequate adaptation of, 298, 299
limits presented by, 312
and non-extraction treatment, 298
and rapid palatal expansion, 298
risk factors for compromising, 300
  patient-specific, 301–303, 302
  treatment-specific, 303–304
significant variability in, 304
  for specific treatment options, 306
  transposed and ectopic teeth, 309–310
  and treating transposed teeth, 375, 378
  in treatment planning decisions, 335–336
Alveolar housing, evaluating status of, 13
Alveolar morphology
  CBCT analysis for, 116
  and risk of EARR, 333
American Academy of Oral and Maxillofacial
Radiology (AAOMR), 68, 132, 135
American Association of Orthodontists (AAO), 19
American Association of Orthodontists Foundation
(AAOF)
  Craniofacial Growth Legacy Collection, 82
  Legacy Project, 84
American Board of Orthodontics, 323, 325
American College of Radiology (ACR), 67, 119
American Dental Association, 78, 122
Anatomical measurements, “gold standard,” 11
Anatomic landmarks, CBCT identification of, 56, 56
Anode to film distances, 81
Antral pseudocysts, CBCT of, 199, 201–202, 203
Antroliths, in maxillary sinus, 200, 203, 203
Apert Syndrome, 491
Apnea hypopnea index (AHI), 284, 286
Appliance type, and risk of EARR, 330, 333
Arthritides, TMJ imaging in, 225–226, 227
Arthritis, TMJ, 261, 261–262
Artifacts
  patient movement, 152, 152–153
  in prenatal MRI diagnosis, 488
  and quality assurance, 169
  scan parameters influencing, 44, 45
types of, 47
“As low as reasonably achievable” (ALARA) principle,
11, 57, 76, 117, 119, 221, 387
Asthma, and risk of EARR, 333

Asymmetry
defined, 455
developing, 34
facial, 87 (see also Facial asymmetries)
  identification of, 170, 171, 173
Atheromatic disease, diagnosis of, 182, 184
Atlas formation, for surgical simulation, 459, 459–460
Attributable lifetime radiation risk, 10, 10
Axenfeld-Rieger Syndrome, root anomalies associated
with, 337
Background radiation, in U.S., 10, 70
Back-to-Sleep (BTS) program, of National Institute of
Child Health and Development, 489
Bardet-Biedl Syndrome, root anomalies associated with,
338
Beam collimation, FOV reduced with, 74
Beam filtration, 75
Benefit-to-risk ratio, for CBCT, 20, 21, 221
Bilateral sagittal split osteotomy (BSSO), 439, 439
Binning, 74
Biofeedback Anesthesia Method (BAM), for insertion
evaluation, 421
Biology, radiation, 68
Biometric identification, facial animations for, 504
Bite-force relationship, 262
Biting tasks, 261, 261–262
Bjork indicators, 82
Blood vessels, in miniscrew insertion, 412, 417
Body mass index (BMI), and OSA, 284, 286
Bolton analysis, 225–226, 227
Bond position, for impacted teeth treatment, 361, 363–365
Bone, excessive compression of, 419
Bone adaptability
  and alveolar boundary conditions, 304, 305
  and non-extraction treatment, 304
  clinical consideration of, 306
  measuring alveolar boundary conditions in,
  305–306, 306–308
Bone anchored maxillary protraction (BAMP), 427
  assessing treatment effects for, 428–429
  high variation in treatment response of, 432
  imaging protocol, 429–432, 430–432
  long-term follow-up of, 427
  outcomes assessment of, 432–433
  mandible, 433, 434
  midface, 432–433, 433
  temporomandibular joint, 433, 434
  surgical and orthopedic protocol for, 429, 429
  2D analysis of, 428
Bone biotypes
assessing, 309
classification of, 307, 308, 308
and predictors of bone loss, 309
Bone density
in implant dentistry, 419
and risk of EARR, 333
Bone depth, assessment of, 418, 418
Bone loss, during orthodontic treatment, 297
Bone resorption, in maxillary expansion, 404
Bone tissue remodeling, of TMJ, 252–253, 254
Bone volume to total volume ratio (BV/TV), 396, 396
Bone width, determination of, 13
Bony changes, 3D quantification of, 250
Bony dehiscences, detection of, 297, 297
Boundary conditions. See also Alveolar boundary conditions
CBCT imaging of, 28, 29, 34
determination of anterior, 29
and treatment outcomes, 15–16
Brain, exposure of, 75, 75
Brain tumors, and bitewing radiographs, 67
British Orthodontic Society, guidelines of, 135
Brune v. Belinkoff, 130
Buccal bone, thicknesses for, 307, 308
Buccal dentition, standard view of, 155, 156
Buccolingual angulation, 326
Buccolingual inclinations
coronial sections for, 233
measurement of, 235
ranges for, 231, 233, 234
Bud-cap-bell stages, 309
Califications
of carotid arteries, 186, 186–187, 187
dystrophic, 170, 181
intradermal, 190, 194, 194
Caldwell-Luc procedures, CBCT imaging following, 203–204
Calibration, of CBCT scanners, 63
Camouflage treatment, vs. surgical treatment, 84, 89
Cancer incidence
prediction of, 70
and radiation injury, 68, 69
Cancer risks, for CBCT, 77
Canine eruption, in CL/P patients, 351
Canines
CBCT of impacted, 140–141, 142
ectopic, 85, 143, 144
normal development and eruption, 351–352
in OFCD Syndrome, 501, 501
palatally displaced, 354, 355
reconstruction of maxillary, 143, 143
2D vs. 3D radiographs of, 350–352
Cant correction, in surgical simulation, 446
Carbon nanotube X-ray source, 104, 104, 105
Cardiopulmonary imaging, 110
Carestream Dental unit, 49, 52
Carotid arteries
atheromatosis of, 182, 184
califications of, 186, 186–187, 187, 188–189, 189, 190
surgery of, 134
Case-based selection criteria, 128
Case Western Reserve University (CWRU)
comprehensive CBCT analysis at, 223–229, 225–233, 235
protocols developed at, 222–223
developing norms for, 235, 236–243
transverse analysis of, 231–233, 234, 234, 235
Cemento-enamel junction (CEJ), in alveolar bone measurements, 305–306, 308, 309
Centric relation/centric occlusion (CR/CO), 31
Centric relation record, 443, 444
Cephalograms
constructed from CBCT, 11
limitations of, 221
measurements with, 11
reconstruction of lateral, 157, 157–158
studies with, 82
Cephalograph
of craniofacial morphology, 384–387, 385, 386, 387
head position for, 385, 385
standard PA, 385, 385, 386
Cephalometric analysis, 81, 438
applications of, 273
internal and external reference systems in, 445, 445
limitations of, 274, 275
standard lateral, 223
for surgical planning, 444–445, 451
in treatment planning, 82, 83, 222–223
ture 3D, 438
Cephalometric norms, limitations of, 389
Cephalometric studies
anode to film distances in, 81
justification of, 84, 86
Cephalometry, commonly used landmarks, 384, 385, 386
Cephalostat, introduction of, 81
Cervical spine
calcified ligaments of, 211, 212, 212, 213, 214
degenerative changes of, 211, 212, 212
incidental findings in, 18
surface and bone density changes of, 210–211, 212, 212
Cervical vertebral anomalies (CVAs), 3D imagery of, 502–503, 503
Cervical vertebral maturation, analysis of, 210–211
Charge-coupled devices (CCDs), 73
Children. See also Pediatric patients
guidelines for, 135
radiation risk for, 118–119
risk estimates for, 77
vulnerability of, 68
Chin asymmetry
virtual planning of genioplasty for, 448, 449
virtual splint design for, 448, 450
“Choke points,” in aging non-OSA subjects, 282
Chondromatosis, synovial, 208
Cleft lip/palate (CL/P) defects, 34
CBCT assessment of, 16–17
3D volumetric reconstructions of, 24
treatment for
airway characteristics, 494, 494–495
assessment of individual teeth in, 492, 493
bone grafting procedure, 491–492, 492
implant placement in, 495
maxillary canine in non-cleft and grafted cleft side, 492–493
midface hypoplasia in, 495
Cleft lip/palate (CL/P) patients
canine development in, 351
canine eruption path in, 312
demand for accurate CBCT imaging for, 310–312
3D imaging of, 491–495, 492–494
graft volume for, 311
Cleftocranial dysplasia, 3D imaging in, 498–499, 500
Clinical cases
CBCT for
boundary conditions, 28, 29, 34
placement of TADs, 31
root resorption, 23, 26–28
 supernumerary teeth, 26, 27
TMJ degeneration, 28–31, 30
not indicated for CBCT, 31
Clinical examination, in treatment planning, 222–223
Clinical practice
development of guidelines in, 116
evidence-based approach to, 81, 119
“Clogged arteries,” surgery for, 134
Closest Point (CP) measurements, 258, 259
CMFApp (software), 431
Color-coded maps, 478
condylar positions in, 473
for craniofacial anomalies, 387
of postsurgical BAMP, 434, 434
of post-surgical changes in 3D, 467, 468
for treatment assessment, 431, 431
Compensated dentoalveolar structures, camouflage
treatment of, 310, 311, 312, 313
Complementary metal oxide semiconductor (CMOS), 73
Composite image printout, example of, 361, 363
Computed tomography (CT), 5
in airway assessment, 274–275
development of, 7
evolution of, 103
of fan-beam, 82
in orthognathic surgery, 465
Computed tomography (CT) image, characteristics of, 44
Computed tomography (CT) scanners
applications, 110
detectors, 105
CT image reconstruction, 106–109, 107–109
post-processing, 109–110
spectral CT, 105–106, 106
dose reduction measures into, 107
expanded use of, 104
high-end, 110
manufacturers of, 110
multirow detector spiral, 103–104
portable, 110
with rotating gantries, 105
soft tissue discrimination of, 104
X-ray sources for, 104, 104–105, 105
Computed tomography (CT) scanning
economics of, 110–111
X-ray dose of, 107
Computed tomography (CT) scans, viewing, 109
Computed tomography (CT) screening, reimbursement for, 111
Computer-aided design/computer-aided
manufacturing (CAD/CAM) system, 487, 487
Computer-aided orthognathic surgery (CAOS), 24–26
25
Computer-aided surgical simulation (CASS), 24–26, 25, 454
Computer-assisted orthognathic surgery (CAOS), 441–443, 442–444
Concha bullosa, CBCT imaging of, 205
Condylar hypoplasia, surgical simulation for, 446, 447, 448
Condylar malpositioning, 3D detection of, 470, 470–471
Condylar morphology, CBCT monitoring of, 30
Condylar position
class III
changes in coronal plane, 475
surface distance analysis, 475
postoperative, 473
  changes in axial plane, 473, 474
  changes in sagittal plane, 473, 475
  linear and angular changes, 473
Condylar shape, statistical significance maps of, 260, 260
Condyles
  asymmetry of, 210, 210, 211
  following BAMP, 434
  CBCT assessment of, 83, 87
  CBCT measurements for, 466
  displacement of, 87
  hypoplasia of, 210, 210, 211
  loading angle for, 264, 264
  3D virtual surface model of, 249, 249
Cone beam computed tomography (CBCT), 5, 26
  as adjunct to standard oral imaging, 122
  advantages of, 15, 115, 116–117, 221, 321, 372
  alveolar boundary conditions in, 303
  assessment of orthodontic surgery patients with, 479
  benefits of, 83
    additional diagnostic information, 144–146, 145–147
    debate over, 139–140
    increased treatment efficiency, 147
  minimization of unexpected issues, 143, 143–144, 144
    reduced ambiguity, 140–142, 141, 142
  case-based, 26–31, 27, 29, 30
  clinical utility of, 12, 35
  compared with MSCT, 7, 8
  for craniofacial patients, 486
  dataset, import of digital model into, 91, 93
  developing approaches and protocols for, 349
  and digital models, 88–97, 90, 92–97
  efficacy of, 6, 19
  emergence of, 320–321
  enhanced configurations with, 12
  fusion with other 3D visualization modalities, 86, 88
  growing popularity of, 7, 139
  hierarchy of indicators for, 19–20, 20
  and improvement of treatment, 83–84
  incidental findings identified by, 185 (see also Incidental findings)
  integration of, 162
  introduction to dentistry, 185
  justification for use of, 19, 20, 27, 33–34, 120, 122
  assessing risk for, 148
  compared with 2D imaging, 142
  ethical issues, 134–135
  evidence-based selection criteria for, 127
  for impacted teeth, 352
  regulatory and legal concerns, 134–135
limitations of, 185
  measuring radiation dose in, 71
  medical applications of, 43
  MSCT compared with, 44, 44
  multidimensional perspectives provided by, 7, 8
  orthodontic applications of, 9
  orthognathic and craniofacial anomalies, 24–26, 25
  panoramic radiography compared with, 11
  poor LCD of, 46
  preference for, 6
  radiographs replaced by, 83

    evidence base for, 119–120
    and need for guidelines, 120, 139
  spatial resolution obtained by, 45
  and 3D photography, 98
  3D structure analysis with, 438
  utilization of, 6
Cone beam computed tomography (CBCT) analysis at CWRU, 223–224
  capturing views, 225–230, 226–232
  image management protocol, 224, 225
  standardization of, 223–224
  standardized 3D, 326
  validation of, 275
Cone beam computed tomography (CBCT) images analysis of
  collecting diagnostic information for, 170, 171–173, 173, 174–184, 175–184
  system for, 170
  components of, 44
  root angulation measurements from, 323, 324
Cone beam computed tomography (CBCT) imaging
  airway normative data for, 275
  assessment on utility of, 82
  compared with 2D radiography, 437
  indications for, 82
  protocols for
    determining imaging needs and FOV, 357
    image interpretation, 357
  risks involved with, 117–119
  selection criteria for, 119
  for TAD application, 411–413, 412, 424
Cone beam computed tomography (CBCT) scanners, 7
  advantages of, 275
  optimization of, 222
Cone beam computed tomography (CBCT) scans
bullet localized on, 140, 141
clinician confidence in, 140
compared with intraoral scans, 162
incidental findings in, 17–18
interpretation of, 18
medico-legal aspects of, 18
orthodontic evaluation of, 153–157, 154–156
post-surgery, 98
problems with, 86, 88
Cone beam computed tomography (CBCT) studies
longer term, 478
typodont-based, 323, 324
Cone beam computed tomography (CBCT) technology,
in-office, 441
Cone beam computed tomography (CBCT) units
in dental offices, 437
evolution of, 43
examination doses for, 71, 72
examples of, 48
extended FOV, 52
FDA approved, 115, 116
FOV size with, 71
medium to large FOV, 50–51
range of doses for, 71, 72
selecting, 64
small to medium FOV, 49
varying dose estimates for, 122
with wide range of FOV, 53–54
Consumer information, for CT scanners, 110
Coordinate measuring machine (CMM), 321
Coronal synostosis, 489, 490
Cortical bone thickness
and alveolar boundary types, 298, 298
and risk of EARR, 333
Cranial anomalies, and alveolar boundary conditions,
312–313. See also Craniofacial anomalies
Cranial base
incidental findings in, 18
registration, 255, 257
Craniofacial anomalies, 34
application of 3D imaging in
cleft lip and palate, 491–495, 492–494
cleridocranial dysplasia, 498–499, 500
craniosynostosis and craniosynostosis syndromes,
489–491, 490, 491
Down Syndrome, 498, 499
ectodermal dysplasia, 499, 501

qualitative and quantitative assessment of, 12
Craniosynostosis
3D imaging in, 489–491, 490, 491
prenatal detection of, 489
Craniosynostosis syndromes
management of, 490–491
presentation of, 489–490, 490
Crossbite
bilateral posterior, 236–238, 243
posterior molar region, 239–241, 243
Crowns, CBCT, in virtual surgery, 94, 94
Curved planar reconstruction (CPR), 59, 61
Curve of Wilson, 389
Cystic fibrosis, ruling out, 198
Cystic lesions
contaminated, 175–176, 177
diagnosis of, 173, 175, 176
identifying, 176
in left maxillary sinus, 180
Cystinosis, root anomalies associated with, 339
Cysts
odontogenic, 176
subchondral, 261
of TMJ, 208
Decision tree, for CBCT, 20, 21
Deficit Reduction Act (DRA), 110
Deformity. See also Craniofacial anomalies
measuring, 444–445
surgical simulation for, 446
Degenerative joint disease (DJD)
disease progression in, 250
of TMJ, 207–208, 209, 210, 264
TMJ imaging in, 249–252, 251
Density. See also Bone density
identification of, 179
interpretation of, 170, 171, 172
Dental anomalies, CBCT analysis of, 28, 116
Dental compensations
and CBCT norms, 223
detecting, 243
Dental models, 3D, for craniofacial patients, 487
Dental office, CBCT scans taken in, 437
Dental roots, during miniscrew insertion, 412, 414–417
Dental tipping, in maxillary expansion, 15
Dental trauma, and risk of EARR, 332, 334
Dentigerous cyst, identification of, 175, 176
Dentin dysplasia, root anomalies associated with, 337
Dentistry, introduction of CBCT to, 6
Dentists, as students, 162–163
Dentoalveolar boundaries, CBCT analysis for, 116
Dentoalveolar compensations, maintenance of, 310, 312
Diagnosis, orthodontic, 7
and alveolar boundary conditions, 294–295, 295, 296
clinical exam in, 222
hierarchy of indicators for CBCT, 19–20, 20
impact of CBCT images on, 99
process of, 182–183
role of CBCT in, 19, 222–223
Diagnostician, responsibilities of, 216
Diagnostic imaging
possible overuse of, 67
purpose of, 167
Diagnostic test
defined, 133
vs. screening procedure, 127
Diagnostic tool, CBCTs evolution as, 139
Digital data, physical casts produced from, 487, 487
Digital imaging, 3D, 7
Digital Imaging and Communications in Medicine (DICOM), 429, 486
datasets, 98
format, 91
international standard of, 446
Digital models, 88–97, 90, 92–97
Digital records, advantages of, 485–486
Dilacerated roots, CBCT-based diagnosis of, 334–336, 335, 336
Dilacerated teeth, 310
Dilacerations, failure to diagnose, 336
Direction of tooth movement, and risk of EARR, 330
Disc failure, TMJ, 263, 265
Disease
CBCT root mapping as indicator of, 336, 337–339, 340, 340
identification of, 170, 172
Distance of tooth movement, and risk of EARR, 330
Distraction splint therapy, for TMJ, 254
DNA damage, 69
Dolphin Imaging Software, 306
Dolphin 3D (software), 420
Doppler ultrasound, 188, 189
Dose, X-ray. See also Radiation dose
factors affecting, 72, 73, 75
mean kV, beam filtration, 75
phosphor coating, 76
pixel size, 73–75, 74, 74
receptor technology, 75, 75–76
volume size, 73, 74
patient-related factors affecting, 76
Dose differences, estimating, 73
Dose-response hypothesis, 117
Dose-response relationship, linear, nonthreshold, 117
Double jaw procedure, virtual, 96. See also Two-jaw surgery
Down Syndrome
3D imaging in, 498, 499
patients with, 134
Dwarfism, root anomalies associated with, 339
Dynamic stereometry, 265
Dyskeratosis, root anomalies associated with, 338
EARR. See External apical root resorption
ECRI Institute, 110
Ectodermal dysplasia, 3D imaging in, 499, 501
Ectopic teeth
and abnormal boundary conditions, 310
CBCT assessment of, 83, 85
development of, 309–310
Effective dose (E)
in radiation exposure, 117–118
and tissue weighting factors, 117–118
Ehlers-Danlos Syndrome, root anomalies associated
with, 338
Ellis-van Crevel Syndrome, root anomalies associated
with, 337
Embryogenesis, tooth development in, 340
Eminence development angle, 264, 264
Enostosis, 179
Epidemiologic studies, on effects of radiation dose, 69–70
Equivalent dose, calculating, 71
Eruption, tooth
guided, 370
research on, 350
Erythema multiforme, root anomalies associated with, 339
Ethical issues, 133–134
Ethnicity
    and cephalometric norms, 389
    and risk of EARR, 332
European Orthodontic Society, 429
Evaluation, orthodontic
    of CBCT scan, 153
    regions of interest in, 156, 156
    standard views, 154, 155, 156
    volume orientation in, 153–154, 154
Evidence-based approach
    to clinical practice, 81
    selection criteria, 128
Exostosis, of cervical spine, 212
Expert witness, and standard of care, 130
Exposure, radiographic
    acute vs. chronic, 77
    measures of, 73
    scanning time in, 73
Exposure settings, for CBCT scanning, 117
External apical root resorption (EARR), 26
    described, 326, 328
    diagnosis of, 328
    imaging of, 13
    managing, 328
    risk factors for, 321, 328
    risk factors for orthodontically induced, 329, 330–333, 333–334
    X-ray machine settings for, 328
Extracranial findings
    calcified ligaments, 190, 192, 192
    calcified lymph nodes, 190, 193, 193
    carotid space calcifications, 188–189, 189, 190
    intradental calcifications, 190, 194, 194
    phleboliths, 190, 194
    sialoliths, 190, 191, 191
    tonsilloliths, 190, 191, 191–192, 192
Extraction, 3D images for, 21, 22
Extraction treatment, and risk of EARR, 330
Face, soft tissue landmarks of, 471, 472
Facebow systems, differences in, 89
Facebow transfer, 88
Face mask (FM) therapy, 427, 428
Facial analysis, extraoral, 464
Facial asymmetries. See also Craniofacial anomalies
    CBCT imaging for, 26
    diagnosis of, 454
        midline determination in, 454, 455, 456
        mirroring techniques in, 454, 455, 456
        frontal cephalogram in, 159
    image analysis techniques for, 460
    outcome design, 459, 459–460
    surgical simulation of, 458–460, 459
    virtual treatment planning for, 446, 447
    Facial deformity, surgical simulation for, 449
    Facial growth, surface scanning for, 504
    Facial patterning, and alveolar boundary conditions, 302
    Facial phenotype, and airway shape, 282
    Facial profile, two-jaw surgery for, 472, 477
    Facial recognition, facial animations for, 504
    False-positive findings, inadvertent diagnosis of, 10
    Familial osteodysplasia, root anomalies associated with, 338
    Fenestrations, effect of skeletal classification on presence of, 301–302
    Fibrous dysplasia, and orthodontics, 143–145, 144
Field of view (FOV)
    in CBCT classification, 47, 49–54, 55
    CBCT protocols, 31–32, 32
    for CBCT scanning, 117
    differences in, 75, 75
    in dose determination, 71
    in effective dose calculation, 118, 118
    guidelines for, 135
    and imaging protocol, 168
    limited, 300
    location of, 76
    and pixel size, 74, 75
    and radiation dose, 57–59, 58, 59
    and radiation received by patient, 222
    in volume acquisition, 148, 150, 150
Filtered back projection (FBP)
    image quality from, 106
    to reconstruct images, 106
    variations of, 107
Filters, colored, 156, 156
Finger habits
    CBCT indicated in, 300
    and risk of EARR, 332
Flat panel detector (FPD) technology, 43, 74
Floor of mouth
    images of, 172, 175
    malignancy in, 181, 183
Flying, and radiation risk, 78
Follow-up, CBCT
    of airway findings, 196
    for cervical spine findings, 212
    of extracranial soft tissue calcifications, 190
    for foreign bodies, 215
    of intracranial calcifications and lesions, 187
    for jaw defects, 207
of lesions of paranasal sinuses, 199–200
of nasal cavity lesions, 199–200
for TMJ conditions, 210
Follow-up examinations, and imaging protocol, 168
Foramen cecum, in image orientation, 224, 225
Foramina ovale, in image orientation, 224, 225
Force level, and risk of EARR, 330
Foreign body
CBCT of, 213–214, 214–215
in maxillary sinus, 200, 203
Fracture, from mandibular osteotomy, 477, 478
Frame acquisition
scan time, 152
and spatial resolution, 151
Frankfort Horizontal Plane (FHP), 88, 153, 154, 282, 284, 354, 355, 438, 444
Fraser Syndrome, root anomalies associated with, 337
Frontal cephalograms, reconstruction of, 159–160, 160
Frontal view, 154, 155
Full-mouth intraoral survey (FMX), 77
Galileos® Comfort unit, 58
GAPO (growth retardation, alopecia, pseudoanodontia, optic atrophy), root anomalies associated with, 339
Gendex unit, 50–51
Genetic mutation, 69
Genetics, and risk of EARR, 332
Genetic testing, 340, 488, 501
Genome-wide association studies, 350
Glaucoma, testing for, 129–130
Glenoid fossa, following BAMP, 434
Graft material, for CL/P patients, 311
Growth adaptation, of TMJ, 254
Growth changes, with malocclusions, 390
Growth map, 503–504
Growth studies, establishing norms for, 389
Guided eruption, establishing norms for, 389
Guidelines
AAOMR, 132
need for, 132
practice, 131 (See also Standard of care) for use of CBCT, 120
Guys Image Processing Lab (GIPL), 429
Hallermann-Streiff Syndrome, root anomalies associated with, 337
“Halo effect,” 176, 180
Head and neck cancer, lymph node involvement in, 193
Headfilms, 83
Head posture, and airway size, 475
Hemifacial microsomia (HFM), 3D imaging in, 495–497, 496, 497
Hiroshima, study of people from, 68, 70
Histological studies, 405
Hitachi Medical Systems unit, 52

Hydraulic diameter, 287, 287
Hyoid bone, 188, 189
and airway shape, 282, 283
landmarks and measurements, 283, 284
Hypopharynx, 273
i-Cat unit, 58, 58, 59
Iluma Elite unit, 58
Image Gently™ campaign, 79, 119, 135
Image interpretation, software functions in, 59–63, 60–62
Image management protocol, CWRU landmarks and plane, 224, 225
orienting head in, 224, 225
Image noise
factors affecting, 46–47
occurrence, 46
scan parameters influencing, 44, 45
Image quality
improvements in, 107, 107–108
measurement of, 55
objective, 56
and radiation dose, 68
subjective, 55–56, 56
Image reconstruction, CT, 106–109, 107–109
Image resolution, sensor size and, 300
Images
panoramic, 82
3D volumetric-rendered view, 7, 8
Images, CBCT, 9
interpretation of, 6
pixels in, 73–75, 74, 74
Image Wisely and Image Gently campaigns, 67–68
Imaging, 63
dental, 63
protocol for, 121
relative radiation level for, 78, 78
Imaging, medical, 63
artifacts in, 47
image noise in, 46
resolution in, 44–46, 46
Imaging Sciences International unit, 50–51, 52, 53–54
Imaging technologies
with no risk, 78
ultrasound, 406

Impacted canines
CBCT of, 140–141, 142
guided eruption of, 364, 367
optimal force to align, 366, 368
palatally, 358
root resorption associated with, 356
surgical access for, 355

Impacted teeth, 350
and abnormal boundary conditions, 310
canines, 351–352
CBCT for imaging of, 20–24, 147, 352, 354–356, 355
in cleidocranial dysplasia, 499, 500
with dilacerated root, 335
pathophysiological mediators of, 351
premolars, 370–372, 372–374
pre-treatment photographs of, 368, 369, 369
prevalence of, 350
protocols for CBCT of, 357–358
root resorption associated with, 352, 353
appliance design, 369, 369–371
bond positioning for, 361, 363–365
spatial position and proximities in, 360, 360–361, 362, 363, 370
springs and anchorage, 361, 364–366, 366–374, 368–369
treatment of
approaches to, 358–359
suboptimal mechanics, 361, 366
virtual diagnosis for, 359–360
treatment results for
CBCT of, 148, 149
Panorex® of, 148, 149

ImpaCT² project, 110

Implant dentistry, CBCT use in, 133–134
Implant design, 418

Implant placement
for CL/P patients, 495
in growing child, 501
virtual simulation for, 417

Implant site, pre-insertion imaging of, 414
IMTEC unit, 52

Incidental findings
of airway, 194–195, 195, 196, 196
categories of, 186
of cervical spine, 210–212, 211, 212, 212, 213, 214
developmental defects of jaws, 205–207, 207, 207
diagnosing of, 216
extracranial, 188–189, 189, 190, 191–194, 191–194
frequency of, 185
intracranial, 186, 186–187, 187, 188
medico-legal implications of, 17–18
of paranasal sinuses and nasal cavity, 195–198, 199–200, 201–205
of temporomandibular joint, 207–210, 209, 210, 211
Incisors
missing lower, 242, 243, 245
with thin alveolar boundary condition, 301, 302
Incisors, maxillary
fused, 145, 145
treatment plan for, 146, 146
treatment progress of, 146, 147
panoramic radiograph of, 145, 145
supernumerary
CBCT scan of, 145–146, 146
treatment plan for, 146, 146
treatment progress of, 146, 147
Incisor to mandibular plane (IMPA), 235

Incontinentia Pigmenti Syndrome (IP), 3D imagery of, 502, 502

Insertion site
and CBCT imaging, 423–424
pre-drilling at, 420, 420
for TAD placement, 412, 413, 415, 416
Insertion technique, for TAD placement, 418
Insertion torque
managing, 419–420
in primary stability, 418
and secondary stability, 419

Interdigititation index, 393, 395

International Commission on Radiological Protection (ICRP)
on calculation of effective dose, 71
weighting scheme of, 71

Interocclusal relationships, in surgical simulation, 446

Interpretation. See also Cone beam computed tomography analysis
CBCT, 349
goal of radiographic, 167
software functions in, 59–63, 60–62

Interradicular distance (IR), 414, 415, 415

Intracranial findings
internal carotid calcifications, 186, 186–187, 187
pineal gland calcifications, 187, 187, 188
pituitary gland tumors, 187, 187–188, 188
Intraoral scanners, 162
Intraoral vertical ramus osteotomy (IVRO), 464
InVivo software package, 420

Irradiation, risks of, 406. See also Radiation risk
ITK-SNAP tool, 429, 430, 456, 457
Index 519

Jaws
  developmental defects of
    mandibular, 206–207, 207, 207
  periradicular and pericoronal lesions, 205–206, 207
  multidimensional imaging for biomechanics of, 261
  CNS organization of muscle activation and TMJ
    loads, 263, 263–264, 264
  symmetry and asymmetry of muscle organization,
    262, 262–263
  3D geometry and CNS control, 261–262
  3D space and time effects on TMJ, 264–266,

Stone models, laser scans of, 446
Structured light, 5
Stylohyoid ligament, calcification of, 188, 189
Stylloid process, elongated, 193, 193
Stylomandibular ligament, calcified, 190, 192, 192
Submandibular salivary glands
- depression, 174, 174
- identification of, 175

Submentovertex radiographs, reconstruction of, 159, 159

Sudden Infant Death Syndrome (SIDS), 489

Superimpositions
- condylar positions in, 473
- in hemifacial microsomia, 496, 497
- landmark-based method for, 466, 466
- post-surgical changes in 3D, 468
  - 3D, 478

Supernumerary teeth
- CBCT for, 26, 27
- in clidocranial dysplasia, 499, 500
  - panoramic view of, 27
- SureSmile® technique, 329
- Surface distance analysis
  - of condylar displacements, 475
  - condylar positions in, 473
  - in mandibular asymmetry, 456
- Surface distance maps, color-coded, 456, 457, 458
- Surface model analysis, for 3D superimpositions, 256, 258

Surgery, soft tissue adaptation following, 98. See also Orthognathic surgery

Surgery planning, virtual, 88

Surgical access, choosing, CBCT for, 21

Surgical evaluations
- class II, 477, 478
- class III, 467
  - condylar positions, 473–475, 474
  - of hard and soft tissue movement, 472–473
  - maxillomandibular changes, 468–471, 469, 470
  - pharyngeal airway, 475–477, 476
  - soft tissue changes in, 471–472, 472
- Surgical guide, stereolithographic, 415, 416
- Surgical procedures, virtual, 25, 25–26
- Surgical simulation, 445–446
  - case study for, 446–448, 447–451
  - computer-aided, 24–26, 25
  - for craniofacial patients, 488
  - technique appraisal in, 448–450
- Surgical splint, in virtual surgery, 95–96, 97
- Surgical stents, laboratory-fabricated, 415
- Systematic reviews, in evidence-based practice, 119–120

Taurodontism, in CL/P patients, 492, 493

Technological innovation, and market, 103

Technology assessment studies
- accuracy of, 11
  - CBCT vs. panoramic radiograph, 11–12
  - radiation exposure, 9–11
  - technology enhancements, 12

Teeth, tipping of, 84. See also Canines; Ectopic teeth; Impacted teeth; Incisors; Premolars; Supernumerary teeth; Transposed teeth

Temporary anchorage devices (TADs)
- CBCT for application of, 411–412
  - advantages of, 412, 412–413, 413
  - analysis, 418–419
  - disadvantages of, 413
  - evaluation of macroanatomical structures, 414–418, 415–418
  - imaging protocol for, 413–414
  - macro- and microanatomical determinants, 414
  - for CL/P patients, 495
  - determining stability of, 13
  - placement of, 31
  - post-op insertion evaluation of, 421–422, 422, 423
  - treatment outcomes, 422–423, 423
  - treatment planning for, 411

Temporomandibular joint (TMJ). See also Temporomandibular joint (TMJ) bone;
- Temporomandibular joint disorders (TMJDs)
  - anatomy and morphology of, 14
  - anomalies in, 209–210, 210, 211
  - in BAMP, 433, 434
  - bilateral degenerative changes in, 30
  - bony changes in, 250
  - CBCT imaging of, 28–29, 30, 116, 248–249, 249
    - acquired anomalies, 209–210, 210, 211
    - degenerative joint disease, 207–208, 209, 210
    - inflammatory conditions, 208
    - reactive, cystic, and neoplastic lesions, 208–209, 210
  - developmental disorders of, 247
  - disc displacement in, 264–266, 265, 267
  - disc failure of, 263, 265
  - DJD in, 264
  - erosion, 255
  - examination, dose reduction for, 74, 74
  - growth and development of, 264
  - image-assisted evaluation of, 252–254
  - imaging of, 248–249, 249 (see also CBCT imaging of)
    - in arthritides and degenerative joint diseases, 249–252, 251
    - articular disc appearance, 252, 253
    - bone tissue remodeling, 252–253, 254
    - conventional radiographic, 248–249, 249
    - internal derangements of, 252, 253
    - longitudinal bone remodeling of, 250, 251
    - MRI visualization of, 250–252
  - index of morphological variability for, 250–251
inflammatory conditions of, 208
lesions of, 208–209, 210
pathologies/pathological processes of, 29–30, 247
radiographic examination of, 28
reconstructed tomograms of, 227, 229
stress-field translation in, 265, 265
therapeutic remodeling, of, 254
Temporomandibular joint (TMJ) bone
CBCT assessment of changes in, 255
3D superimpositions for evaluation of, 255, 256
analysis of subchondral bone changes, 261
construction of 3D surface models, 255
image registration in, 255, 257, 258
integrated shape analysis, 260, 260
quantitative measurements, 255–256, 258–259, 259
statistical modeling, 260, 260
Temporomandibular joint disorders (TMJDs), 34, 247
diagnoses of, 247
and outcomes, 30
pathogenesis of, 261
Therapeutic remodeling, of TMJ, 254
Thermoluminescent dosimeters (TLDs), 71
Third-party payers, and standard of care, 129
3D analysis, standardizing, 466–467
3D color maps, for craniofacial anomalies, 387
3D coordinate system, 88
3D image analysis
for facial asymmetry patients, 460
influence on treatment plan of, 86
3D information, rules identifying, 83
3D motion analysis systems, for craniofacial anomalies, 387
3D objects, on 2D plane, 384
3D photography, for craniofacial anomalies, 486–487
Thumb-sucking habits, CBCT indicated in, 300
Thyroid collar, during scan, 153
Thyroid gland, exposure of, 75, 75, 76
Titanium molybdenum alloy (TMA) wires, 366
Tonsilloliths, CBCT diagnosis of, 190, 191, 191–192, 192
Tooth angulation studies, 326, 327
Tooth size measurement, with CBCT, 22
Tooth type, and risk of EARR, 331, 334
Tractional path, defined by CBCT, 21–22
Transpositional studies, 340
Transposed teeth
and abnormal boundary conditions, 310
CBCT for, 20–21
development of, 309–310
prevalence of, 350
protocols for CBCT of, 357–358
Transposition
defined, 350
pathophysiological mediators of, 351
Transverse analysis, CWRU, 230–231, 233, 233, 234, 234, 235
interpretation in, 243
for bilateral posterior crossbite, 230, 236–238, 243
posterior crossbite in molar region, 239–241, 243
population norms vs. selected normals, 235
procedure for, 233, 234, 235
Transverse dimension, in surgical orthodontic treatment, 438
Transverse ligament of atlas, 211
Treatment, orthodontic
CBCT analysis of, 86, 88
3D image-aided
appliance design, 369, 369–371
bond positioning in, 361, 363–365
spatial position and proximities in, 360, 360–361, 362, 363, 370
springs and anchorage, 361, 364–366, 366–374, 368–369
Treatment outcomes. See Outcomes
Treatment planning/plans, 153. See also Evaluation, orthodontic
and alveolar boundary conditions, 295
and ambiguity, 140
application of CBCT to, 19, 84, 222–223
customized virtual, 359–360, 370
derived from 2D radiographs, 21
for impacted teeth, 351–352, 359–360
impact of CBCT images on, 99, 140–141, 142
paradigm for, 446 (see also Surgical simulation)
radiotherapy, 110
for unerupted tooth, 335
virtual, 90, 370
Treatment time, and risk of EARR, 330, 333–334
Triplane view, for orientation, 305, 306
Triple-scan procedure, 90
Trisomy 21, 3D imaging in, 498, 499
Tumors
benign, 176, 177, 179, 180, 180–181, 181, 182
brown, 176, 177
odontogenic keratocystic, 176, 178
slow-growing lesions, 176, 180
Tungsten target tubes, 104–105
Tunnel vision, avoiding, 153, 154
Turner Syndrome, root anomalies associated with, 339
22q11.2 Deletion Syndrome, 3D imaging in, 497–498
Two-jaw surgery
airway assessment following, 477
with maxillary advancement, 472
Typodont-based studies, 321
Ultrasonography, 78
  for craniosynostosis, 489
developing role for, 406
  3D vs. 2D, 488, 489
Unexplainable findings, diagnosis of, 83, 86. See also
  Incidental findings
U.S. Food and Drug Administration (FDA), 7, 115, 116, 128

van der Woude Syndrome
  root anomalies associated with, 338, 340
  segmentation of, 492, 493
Vatech America unit, 50–51, 52, 53–54
Velocardiofacial Syndrome (VCFS), 3D imaging in,
  497–498
Vera-viewepocs unit, 59
Views, in CWRU protocols
  of airway volume, 227, 229, 231
  cephalogram, 225–226, 227
  maxillary and mandibular intercanine and intermolar
  widths, 229, 232
  maxillary and mandibular root apices position, 229, 232
  panoramic radiograph, 226–227, 228
  right, frontal, and left side transparency, 225, 226
  right, frontal, and left solid views, 225, 226
  temporomandibular joint tomogram, 227, 229
  transverse analysis, 230–231, 233, 234, 235
Virtual surgery procedure (O3DM Surgery), 90
  generating surgical split, 95–96, 97
  import and segmentation of CBCT/CT data, 91, 92
  import of digital model, 91, 93
  occlusion check in, 95, 97
  registration of CBCT and digital models, 91–93, 93
  removal of CBCT teeth and model bases, 93–95, 94
