Introduction: Distributed intelligence in design  
_Tuba Kocatürk and Benachir Medjdoub*

## PART 1

1. Of sails and sieves and sticky tape  
_bryan lawson*

2. Distributed perspectives for intelligent conceptual design  
_volker mueller*

3. Distributed intelligence or a simple coherent mental model?  
_chris j. k. williams and roly hudson*

4. Sharing intelligence: The problem of knowledge atrophy  
_peter brandon*

## PART 2

5. Pedagogical frameworks for emergent digital practices in architecture  
_brent allpress*

6. Emergence and convergence of knowledge in building production: Knowledge-based design and digital manufacturing  
_eduardo lyon*

7. Artifact and affect: Open-ended strata of communication  
_mattias del campo and sandra manninger*

8. Digital tools for creative hinges  
_sean hanna*

## PART 3

9. The effects of integrated BIM in processes and business models  
_arito kiviniemi*

10. Integrated building design for production management systems  
_rita cristina ferreira*
Contents

11 Flexibility, semantics and standards
Robin Drogemuller and John H. Frazer 154

12 Examples of distributed intelligence on large-scale building lifecycle projects
Martin Riese 176

PART 4

13 Rapid practice expansion through strategic design computation
Cristiano Ceccato 201

14 Algorithmic modelling, parametric thinking
Neil Katz 213

15 Interview with the Specialist Modelling Group (SMG): The dynamic
coordination of distributed intelligence at Foster and Partners
Hugh Whitehead, Xavier de Kestelier, Irene Gallou and Tuba Kocatürk
232

16 Interview with Lars Hesselgren, Director PLP Research
Lars Hesselgren and Benachir Medjdoub 247

17 Geometry, topology, materiality: The structural parameters
in a collaborative design approach
Manfred Grohmann and Oliver Tessmann 252

Index 260
