UV treatment, 325
Vacuum, on compounding extruder, 297
Valence of active sites, 48–51
Vanadium complexes, 45
VCl₄/Al(C₂H₅)₂Cl catalyst system, 45
Vapor-phase fluidized beds for polypropylene, 8
Venting, injection molding, 304
Vibrational peak shifts, in co-crystals, 203–204
Vicinals, 148
Vinyl monomers, polymerization of, 17–18
Viscoelasticity, 186
Viscosity
  for glass fiber-reinforced SPS/Nylon, 343
  molecular weight and, 271–272
SAXS intensity profiles of high-impact SPS and, 380–382
  of SPS, 293, 294, 326–327
Viscosity ratio, effect of particle size of SPS in carpet fiber, 350, 351, 353
Volatile organic compounds (VOCs), 219–222
Wall thickness, in plastic product design, 299
Warpage, SPS and, 326, 327
Water absorption, of SPS, 326
Water conductor assembly, 353
Water removal, from SPS, 7
Water supply components, SPS and, 13, 331, 332
WAXD. See Wide-angle X-ray diffraction
WAXS, 184
Weight chain length distribution function, 148, 149
Wide-angle X-ray diffraction (WAXD), 162, 171, 176
Wire harness connectors, 330
Wu’s equation, 391
XANES, 53–54
Xarec, 12–13
X-ray diffraction (XRD)
  characterization of co-crystals, 202
  of organoclay, 423
  of polymer nanocomposites, 420–421
Yield, SPS polymer, 142
Ytterbium, 102
Ytterbium(II) half-sandwich complexes, 133–135
Yttrium, 132
Yttrium complex, 129–130
Zeolites, 221
Zero growth rate temperature, 182
Zero-order moments, 146
Zero shear viscosity, 271, 272
Ziegler, Karl, xxi
Ziegler-Natta catalysts, 17–18
Zigzag form morphology, 164–173
  α form, 164–168
  β form, 168–170
  lamellar and spherulitic, 170–173
