CONTENTS

Preface xi

1 Introduction 1

1.1 Numerical Simulation of Antennas 1
1.2 Finite Element Analysis Versus Other Numerical Methods 2
1.3 Frequency-Versus Time-Domain Simulations 5
1.4 Brief Review of Past Work 7
1.5 Overview of the Book 9
References 11

2 Finite Element Formulation 17

2.1 Finite Element Formulation in the Frequency Domain 17
2.2 Finite Element Formulation in the Time Domain 24
2.3 Modeling of Complex Materials 27
   2.3.1 Modeling of Electrically and Magnetically Lossy Materials 28
   2.3.2 Modeling of Electrically Dispersive Materials 30
   2.3.3 Modeling of Magnetically Dispersive Materials 36
   2.3.4 Modeling of Doubly Dispersive Lossy Materials 40
   2.3.5 Validation Examples 43
2.4 Solution of the Finite Element Equations 49
2.5 Higher-Order and Curvilinear Finite Elements 50
2.6 Summary 52
References 53

3 Finite Element Mesh Truncation 55

3.1 Absorbing Boundary Conditions 55
   3.1.1 First-Order Absorbing Boundary Condition 55
   3.1.2 Second-Order Absorbing Boundary Condition 56
3.2 Perfectly Matched Layers 61
   3.2.1 PML in Terms of Stretched Coordinates 62
   3.2.2 PML as an Anisotropic Material Absorber 64
   3.2.3 PML for Truncating the Computational Domain 65
   3.2.4 Finite Element Implementation of PML 67
   3.2.5 ABC-Backed, Complementary, CFS, and Second-Order PMLs 72
References 84
CONTENTS

3.3 Boundary Integral Equations
  3.3.1 Frequency-Domain Formulations
  3.3.2 Time-Domain Formulations
  3.3.3 Treatment of the Infinite Ground Plane
3.4 Summary
References

4 Hybrid FETD–FDTD Technique
  4.1 FDTD Method
  4.2 PML Implementation in FDTD
    4.2.1 FDTD Stretched-Coordinate PML
    4.2.2 FDTD Anisotropic-Medium PML
  4.3 Near-to-Far-Field Transformation in FDTD
  4.4 Alternative FETD Formulation
  4.5 Equivalence Between FETD and FDTD
  4.6 Stable FETD–FDTD Interface
    4.6.1 Initial Approaches
    4.6.2 Stable Formulation
  4.7 Building Hybrid Meshes
  4.8 Wave-Equation Stabilization
  4.9 Validation Examples
  4.10 Summary
References

5 Antenna Source Modeling and Parameter Calculation
  5.1 Antenna Feed Modeling
    5.1.1 Current Probe
    5.1.2 Voltage Gap Generator
    5.1.3 Waveguide Feed Model
  5.2 Plane-Wave Excitation
    5.2.1 Total-Field Formulation
    5.2.2 Scattered-Field Formulation
    5.2.3 Total- and Scattered-Field Decomposition Approach
  5.3 Far-Field Pattern Computation
  5.4 Near-Field Visualization
  5.5 Summary
References

6 Modeling of Complex Structures
  6.1 Thin-Material Layers and Sheets
    6.1.1 Impedance Boundary Conditions
    6.1.2 Shell Element Formulation

CONTENTS

9 Infinite Phased-Array Modeling 284

9.1 Frequency-Domain Modeling 285
  9.1.1 Periodic Boundary Conditions 285
  9.1.2 Mesh Truncation Techniques 294
  9.1.3 Extension to Skew Arrays 298
  9.1.4 Extension to Scattering Analysis 300
  9.1.5 Application Examples 300

9.2 Time-Domain Modeling 303
  9.2.1 Transformed Field Variable 304
  9.2.2 Mesh Truncation Techniques 306
  9.2.3 General Material Modeling 310
  9.2.4 Application Examples 316

9.3 Approximation to Finite Arrays 325

9.4 Summary 332

References 333

10 Finite Phased-Array Modeling 336

10.1 Frequency-Domain Modeling 337
  10.1.1 FETI–DPEM1 Formulation 337
  10.1.2 FETI–DPEM2 Formulation 345
  10.1.3 Nonconforming Domain Decomposition 350
  10.1.4 Application Examples 355

10.2 Time-Domain Modeling 363
  10.2.1 Dual-Field Domain-Decomposition Method 364
  10.2.2 Domain Decomposition for Iterative Solutions 371
  10.2.3 Application Examples 376

10.3 Summary 382

References 385

11 Antenna–Platform Interaction Modeling 388

11.1 Coupled Analysis 389
  11.1.1 FETI–DPEM with Domain Decomposition 390
  11.1.2 Hybrid FETD–FDTD with Domain Decomposition 393
  11.1.3 Hybrid FE–BI Method with FMM Acceleration 399

11.2 Decoupled Analysis 405
  11.2.1 Near-Field Calculation 406
  11.2.2 Far-Field Evaluation by Numerical Methods 406
  11.2.3 Far-Field Evaluation by Asymptotic Techniques 409
  11.2.4 Direct and Iterative Improvements 416

11.3 Summary 417

References 418
CONTENTS

12 Numerical and Practical Considerations 421
  12.1 Choice of Simulation Technologies 421
  12.2 Frequency-Versus Time-Domain Simulation Tools 422
  12.3 Fast Frequency Sweep 424
  12.4 Numerical Convergence 425
  12.5 Domain Decomposition and Parallel Computing 427
  12.6 Verification and Validation of Predictions 428
  12.7 Summary 429
