positive and negative emotions, 106
right-brain–left-brain dichotomy, 109
right-brain training, 98
right hemisphere damage, 102
spatial tasks, 100
speech production and comprehension, 102
split-brain operations, 99–101
verbal tasks, 103, 105–107
visual field studies, 101
visual–spatial abilities, 105
hindsight bias, 5
human intelligence
brain damage, 122, 123
central common element, 117
cognitive ability tests, 114
common verbal influences, 121–122
definition, 113, 114, 118
factor analysis, 114–115
Gardner’s eight intelligences, 119, 119–121
Gardner’s model, 118, 123
general mental ability (g), 115–117, 122, 125
IQ scores, 115
localized neural processing, 122
multiple intelligence model, 118, 120–125
real-life assessment, 124
self-report measures, 124
spatial ability tests, 122
types of, 118
human short-term memory, 59
inquiry learning, 62–63
interteaching, 28, 34–35
intrinsic motivation, 67–77

Law School Admission Test (LSAT), 188
learning styles
ability measures, 13
active vs. reflective learning activities, 18
auditory/visual learning style, 14
cognitive styles, 11
cognitive styles, 11
concrete vs. abstract experiences, 18
definition, 11, 12
Dunn learning-styles model, 16
Gregorc’s model, 18
learning style matching, 12
meta-analysis, 14–16
modality strengths and weaknesses, 12
reliability and validity, 13
sensing learning style, 19
tailoring teaching methods, 20
lecturing
active learning approaches, 27, 29–30
advantage of, 34
aptitude–treatment interaction, 30
criticism, 32
definition, 25–26
vs. discussion methods, 26–27
vs. group work, 30, 31
information-processing research, 33
interactive elements, 33
interactive lecture courses, 33
interteaching, 28, 34–35
limitations, 36
in medical training, 27
meta analysis, 29
in national math and science exam, 27
periodic two-minute pauses, 32
presentation quality, 32
problem-based learning, 27–28
small-group method, 36
STEM courses, 29
step-by-step guidance, 34
student-centered approaches, 35
students’ motivation and participation, 26
vs. team-learning course, 31
longer-term reward programs, 70

Medical College Admission Test (MCAT), 188
meta-analysis
learning styles, 14–16
lecturing, 29
minimally guided teaching strategies, 58, 63
multiple-choice exams, 156
PowerPoint, 48
rewards, 71–73
self-esteem, 130, 133
standardized academic admissions tests, 185, 188
minimally guided teaching strategies
active learning, 55, 56, 62
cognitive load theory, 59
computerized tutoring program, 59
constructivist educational philosophy, 54, 62
critics of, 64
discovery learning, 55, 56, 58, 62
vs. explicitly guided techniques, 58
inquiry learning, 62–63
long-term memory, 60
meta-analysis, 58, 63
misconceptions, 63
novel material learning, 60
primary knowledge, 61
problem-based learning, 62–63
problem-solving strategy, 60
risk of, 61
unguided instruction, 58
multiple-choice exams, 3
advantage, 154
answer-changing beliefs and effects, 164–171
of basic skills, 157
Bloom’s dimensions, 157
vs. completion test, 160
vs. essay exams, 154–157
factor analysis, 155, 156
first instinct fallacy, 163
free-response items, 154
guidelines, 160
limitations, 155
measurement error, 156
and open-ended tests, 155–159, 161
testing effect, 159
verbal aptitude tests, 155–156
multiple intelligence model, 118, 120–125
multitasking
academic passages reading, 87–88
academic performance, 86
in actual classroom, 90
age, 81
brain functions, 91–92
capacity-sharing models, 84
cognitive bottlenecks, 84
college students, 82, 86, 87, 91
multitasking (cont’d)
  computerized laboratory tasks, 83
cost of, 84
declarative memory, 91
definition, 83
effects of television watching, 85
habit memory, 91
instant messaging, 87, 90
negative impact, 88
vs. non-multitaskers, 88, 91
task switching, 83
texting effects, 89–90

National Assessment of Educational Progress (NAEP), 196

open-ended tests, 155–159, 161
overconfidence, 1, 2

passive study techniques, 147
performance underestimation, 4–5

PowerPoint
  advantages, 40, 41, 51
  bulleted lists, 50
  vs. chalkboard, 44, 47
  color and transition features, 50
  computerized animation, 48
  halo effect, 44
  meta-analysis, 48
  non-PowerPoint lectures, 44–48
  positive learning effects, 46
  recommendations, 49
  vs. traditional teaching method, 42,
  43, 45
  and transparencies approach, 44,
  45, 47
  for undergraduate students, 41
  practice testing, 147–151
  problem-based learning, 27–28, 62–63

rereading
  active study strategies, 142, 151
  benefits of, 143–145, 147, 149
  comprehension reading ability, 145
  on delayed test performance, 144
direct factual information
  testing, 144
effectiveness of, 145
  elaborative interrogation, 150
  five-minute reading sessions, 148
  free recall tests, 146, 147
  immediate rereading vs. delay
  between readings, 143, 144
  long-term memory, 142
  and passive study techniques, 147
  positive effect, 146
  practice testing, 147–151
  short-answer test, 149
  test-enhanced learning, 147, 148

rewards
  cognitive evaluation theory, 68
detrimental effects, 74
  impact of, 77
  intrinsic motivation, 67–77
  longer-term reward programs, 70
  meta-analysis, 71–73
  negative effects of, 68, 69, 73
  personality characteristics, 76
  self-motivation, 67
  self-reported interest, 73
  students with autonomy
  orientation, 76
  students with control orientation, 76
  tangible rewards, 78
  vs. unrewarded participants, 68, 69
  verbal rewards, 73, 78

SAT coaching, 174–182
science, technology, engineering, and
  math (STEM) courses, 29
self-assessment, 3, 8
self-esteem
  academic achievement tests, 132
  academic performance, 128–136
  academic self-esteem, 135–139
  assessment, 133
  definition, 128
  exam performance, 130
global self-esteem, 136–139
longitudinal methods, 131
meta-analysis, 130, 133
methodological flaws, 134
personality variables, 131
structural equation modeling, 132
variation in, 138
self-judgment accuracy, 2, 3
small-group learning, 25
standardized ability tests
average group differences, 195, 201, 202
average observed differences, 195, 196
brain differences, 202
cultural bias, 195, 198–199
differential item functioning, 199
factor analysis, 200
internal consistency analysis, 200
measurement error, 197
predictive bias, 200–202
random and systematic error, 197
score gaps, 196
statistical strategies, 199
test bias, 195–197, 199–200, 203
test fairness, 201, 202
Type I errors, 199
