About the Authors xv
Foreword xvii
Preface xix
Acknowledgements xxiii
List of Abbreviations xxv

1 Introduction 1
1.1 Types of Mobility 2
  1.1.1 Terminal Mobility 2
  1.1.2 Personal Mobility 5
  1.1.3 Session Mobility 6
  1.1.4 Service Mobility 7
1.2 Performance Requirements 7
1.3 Motivation 8
1.4 Summary of Key Contributions 9

2 Analysis of Mobility Protocols for Multimedia 13
2.1 Summary of Key Contributions and Indicative Results 13
2.2 Introduction 14
2.3 Cellular 1G 15
  2.3.1 System Architecture 15
  2.3.2 Handoff Procedure 17
2.4 Cellular 2G Mobility 17
  2.4.1 GSM 17
  2.4.2 IS-95 19
2.5 Cellular 3G Mobility 23
  2.5.1 WCDMA 24
  2.5.2 CDMA2000 26
2.6 4G Networks 27
  2.6.1 Evolved Packet System 28
  2.6.2 WiMAX Mobility 31
2.7 IP-Based Mobility
   2.7.1 Network Layer Macromobility
   2.7.2 Network Layer Micromobility
   2.7.3 NETMOB: Network Mobility
   2.7.4 Transport Layer Mobility
   2.7.5 Application Layer Mobility
   2.7.6 Host Identity Protocol
   2.7.7 MOBIKE
   2.7.8 IAPP
2.8 Heterogeneous Handover
   2.8.1 UMTS–WLAN Handover
   2.8.2 LTE–WLAN Handover
2.9 Multicast Mobility
2.10 Concluding Remarks

3 Systems Analysis of Mobility Events
   3.1 Summary of Key Contributions and Indicative Results
   3.2 Introduction
      3.2.1 Comparative Analysis of Mobility Protocols
   3.3 Analysis of Handoff Components
      3.3.1 Network Discovery and Selection
      3.3.2 Network Attachment
      3.3.3 Configuration
      3.3.4 Security Association
      3.3.5 Binding Update
      3.3.6 Media Rerouting
   3.4 Effect of Handoff across Layers
      3.4.1 Layer 2 Delay
      3.4.2 Layer 3 Delay
      3.4.3 Application Layer Delay
      3.4.4 Handoff Operations across Layers
   3.5 Concluding Remarks

4 Modeling Mobility
   4.1 Summary of Key Contributions and Indicative Results
   4.2 Introduction
   4.3 Related Work
   4.4 Modeling Mobility as a Discrete-Event Dynamic System
   4.5 Petri Net Primitives
   4.6 Petri-Net-Based Modeling Methodologies
   4.7 Resource Utilization during Handoff
   4.8 Data Dependency Analysis of the Handoff Process
      4.8.1 Petri-Net-Based Data Dependency
      4.8.2 Analysis of Data Dependency during Handoff Process
   4.9 Petri Net Model for Handoff
### Contents

4.10 Petri-Net-Based Analysis of Handoff Event  
4.10.1 Analysis of Deadlocks in Handoff  
4.10.2 Reachability Analysis  
4.10.3 Matrix Equations  
4.11 Evaluation of Systems Performance Using Petri Nets  
4.11.1 Cycle-Time-Based Approach  
4.11.2 Floyd-Algorithm-Based Approach  
4.11.3 Resource–Time Product Approach  
4.12 Opportunities for Optimization  
4.12.1 Analysis of Parallelism in Handoff Operations  
4.12.2 Opportunities for Proactive Operation  
4.13 Concluding Remarks  

5 Layer 2 Optimization  
5.1 Introduction  
5.2 Related Work  
5.3 IEEE 802.11 Standards  
5.3.1 The IEEE 802.11 Wireless LAN Architecture  
5.3.2 IEEE 802.11 Management Frames  
5.4 Handoff Procedure with Active Scanning  
5.4.1 Steps during Handoff  
5.5 Fast-Handoff Algorithm  
5.5.1 Selective Scanning  
5.5.2 Caching  
5.6 Implementation  
5.6.1 The HostAP Driver  
5.7 Measurements  
5.7.1 Experimental Setup  
5.7.2 The Environment  
5.7.3 Experiments  
5.8 Measurement Results  
5.8.1 Handoff Time  
5.8.2 Packet Loss  
5.9 Conclusions and Future Work  

6 Mobility Optimization Techniques  
6.1 Summary of Key Contributions and Indicative Results  
6.1.1 Discovery  
6.1.2 Authentication  
6.1.3 Layer 3 Configuration  
6.1.4 Layer 3 Security Association  
6.1.5 Binding Update  
6.1.6 Media Rerouting  
6.1.7 Route Optimization  
6.1.8 Media-Independent Cross-Layer Triggers
6.2 Introduction

6.3 Discovery
  6.3.1 Key Principles
  6.3.2 Related Work
  6.3.3 Application Layer Discovery
  6.3.4 Experimental Results and Analysis

6.4 Authentication
  6.4.1 Key Principles
  6.4.2 Related Work
  6.4.3 Network-Layer-Assisted Preauthentication
  6.4.4 Experimental Results and Analysis

6.5 Layer 3 Configuration
  6.5.1 Key Principles
  6.5.2 Related Work
  6.5.3 Router-Assisted Duplicate Address Detection
  6.5.4 Proactive IP Address Configuration
  6.5.5 Experimental Results and Analysis

6.6 Layer 3 Security Association
  6.6.1 Key Principles
  6.6.2 Related Work
  6.6.3 Anchor-Assisted Security Association
  6.6.4 Experimental Results and Analysis

6.7 Binding Update
  6.7.1 Key Principles
  6.7.2 Related Work
  6.7.3 Hierarchical Binding Update
  6.7.4 Experimental Results and Analysis
  6.7.5 Proactive Binding Update

6.8 Media Rerouting
  6.8.1 Key Principles
  6.8.2 Related Work
  6.8.3 Data Redirection Using Forwarding Agent
  6.8.4 Mobility-Proxy-Assisted Time-Bound Data Redirection
  6.8.5 Time-Bound Localized Multicasting

6.9 Media Buffering
  6.9.1 Key Principles
  6.9.2 Related Work
  6.9.3 Protocol for Edge Buffering
  6.9.4 Experimental Results and Analysis
  6.9.5 Analysis of the Trade-off between Buffering Delay and Packet Loss

6.10 Route Optimization
  6.10.1 Key Principles
  6.10.2 Related Work
  6.10.3 Maintaining a Direct Path by Application Layer Mobility
  6.10.4 Interceptor-Assisted Packet Modifier at the End Point
  6.10.5 Intercepting Proxy-Assisted Route Optimization

## 10.13 An Alternative to Multicast

10.14 Conclusions and Future Work

### 11 System Evaluation

11.1 Summary of Key Contributions and Indicative Results
11.2 Introduction
11.3 Experimental Validation

#### 11.3.1 The Media Independent Preauthentication Framework

#### 11.3.2 Intratechnology Handoff

#### 11.3.3 Intertechnology Handoff

#### 11.3.4 Cross-Layer-Trigger-Assisted Preauthentication

#### 11.3.5 Mobile-Initiated Handover with 802.21 Triggers

#### 11.3.6 Network-Initiated Handover with 802.21 Triggers

#### 11.3.7 Handover Preparation Time

11.4 Handoff Optimization in IP Multimedia Subsystem

#### 11.4.1 Nonoptimized Handoff Mode

#### 11.4.2 Optimization with Reactive Context Transfer

#### 11.4.3 Optimization with Proactive Security Context Transfer

#### 11.4.4 Performance Results

11.5 Systems Validation Using Petri-Net-Based Models

#### 11.5.1 MATLAB®-Based Modeling of Handoff Functions

#### 11.5.2 Petri-Net-Based Model for Optimized Security Association

#### 11.5.3 Petri-Net-Based Model for Hierarchical Binding Update

#### 11.5.4 Petri-Net-Based Model for Media Redirection of In-Flight Data

#### 11.5.5 Petri-Net-Based Model of Optimized Configuration

#### 11.5.6 Petri-Net-Based Model for Multicast Mobility

11.6 Scheduling Handoff Operations

#### 11.6.1 Sequential Scheduling

#### 11.6.2 Concurrent Scheduling

#### 11.6.3 Proactive Scheduling

11.7 Verification of Systems Performance

#### 11.7.1 Cycle-Time-Based Approach

#### 11.7.2 Using the Floyd Algorithm

11.8 Petri-Net-Based Modeling for Multi-Interface Mobility

#### 11.8.1 Multihoming Scenario

#### 11.8.2 Break-Before-Make Scenario

#### 11.8.3 Make-Before-Break Scenario

#### 11.8.4 MATLAB®-Based Petri Net Modeling for Multi-Interface Mobility

11.9 Deadlocks in Handoff Scheduling

#### 11.9.1 Handoff Schedules with Deadlocks

#### 11.9.2 Deadlock Prevention and Avoidance in Handoff Schedules

11.10 Analysis of Level of Concurrency and Resources

11.11 Trade-off Analysis for Proactive Handoff

11.12 Concluding Remarks
