Chapter 3 Planning, Testing, and Monitoring Network Synchronization 42

3.1 Introduction 43

3.2 Network Synchronization Planning 43

3.2.1 Primary Reference Source (PRS) Timing 43

3.2.1.1 Considerations for Implementation of an Autonomous PRS 44

3.2.1.2 Considerations for Implementation of a Nonautonomous PRS 45

3.2.2 Transport of Reference Timing between Network Nodes 46

3.2.2.1 Criteria for Selection and Prioritization 46

3.2.3 Intrabuilding Timing Distribution in the U.S. Network 47

3.2.4 Avoidance of Timing Loops 50

3.3 Testing and Validation 52

3.3.1 Tests on Free-Running Clocks 53

3.3.2 Tests for Synchronized Unstressed Operation 53

3.3.3 Tests for Synchronized Stressed Operation 54

3.3.4 Holdover Mode Testing 55

3.3.5 Tests Prescribed for the U.S. Network 55

3.4 Monitoring Network Synchronization 56

3.5 Remarks 57

References 57

Chapter 4 CCS 7: General Description 59

4.1 Introduction 60

4.2 Principles and Terminology 61

4.3 Pros and Cons: CCS 7 versus Channel-Associated Signaling (CAS) 65

4.4 Organization of Signaling Information 67

4.5 Layered Approach in CCS 7 68

4.6 The Message Transfer Part (MTP) 71

4.6.1 Signaling Data Link (Level 1) 71

4.6.2 Signaling Link Functions (Level 2) 71

4.6.3 Signaling Network Functions (Level 3) 72

4.7 User Parts 74

4.7.1 ISDN User Part (ISUP) 74

4.7.2 Signaling Connection Control Part (SCCP) 77

4.7.2.1 Enhanced Addressing Capability 78

4.7.2.2 Connectionless and Connection-Oriented Services 78
### Chapter 5  Introduction to ISDN  88

5.1  Introduction  89  
5.2  Customer Premises in the ISDN  91  
5.3  Protocol Architecture in the ISDN  93  
5.4  Physical Layer in Basic Access  95  
   5.4.1  Wiring Arrangement  95  
   5.4.2  Power Feeding  98  
      5.4.2.1  Powering of Terminals Across the Interface  98  
      5.4.2.2  TEs Powered Locally  102  
   5.4.3  Data Transport between NT and TEs  102  
      5.4.3.1  Coding  102  
      5.4.3.2  Framing  103  
      5.4.3.3  Multiframing: M Bit  106  
      5.4.3.4  Resolving D-Channel Access: E Bit  106  
      5.4.3.5  Activation and Deactivation of Terminals and the NT  107  
   5.4.4  Timing Aspects  111  
   5.4.5  Electrical Characteristics  111  
   5.4.6  Line Transmission and Coding for Basic Access  114  
   5.4.7  Frames and Multiframes on the Digital Subscriber Loop (DSL)  117  
   5.4.8  Start-Up Procedure  118  
5.5  Primary Rate ISDN  121  
References  121

### Chapter 6  Functions of the CCS 7 Signaling Link Level  122

6.1  Introduction  122  
6.2  Signal Unit Formats  124  
6.3  Signal Unit Delimitation  125  
6.4  Signal Unit Alignment  126  
6.5  Error Detection  126  
6.6  Error Correction  127  
   6.6.1  Basic Method  127  
      6.6.1.1  Positive Acknowledgment  128  
      6.6.1.2  Negative Acknowledgment  129  
   6.6.2  Preventive Cyclic Retransmission (PCR) Method  130  
   6.6.3  Criteria for Selection: Basic versus Preventive Cyclic Retransmission (PCR)  131  
6.7  Initial Alignment Procedure  131  
6.8  Processor Outage  135  
6.9  Error Rate Monitoring  136  
   6.9.1  Signal Unit Error Rate Monitor (SUERM)  136  
   6.9.2  Alignment Error Rate Monitor (AERM)  137
Chapter 7  Signaling Network Functions in CCS  

7.1 Introduction 141
7.2 Level 3 Message Format 142
  7.2.1 Service Information Octet (SIO) 144
  7.2.2 The Routing Label 146
7.3 Signaling Message Handling 147
  7.3.1 Message Discrimination and Message Distribution Functions 147
  7.3.2 Message Routing Function 148
  7.3.3 Load Sharing 149
    7.3.3.1 Load Sharing in the U.S. Network 152
7.4 Signaling Network Management 154
7.5 Signaling Link Management 154
  7.5.1 Signaling Data Link and Signaling Terminal Allocation 155
  7.5.2 Signaling Link Activation 157
  7.5.3 Signaling Link Restoration 157
  7.5.4 Signaling Link Deactivation 158
  7.5.5 Signaling Link Set Activation 158
7.6 Signaling Traffic and Signaling Route Management 159
  7.6.1 Changeover 159
    7.6.1.1 Emergency Changeover 162
    7.6.1.2 Time-Controlled Changeover 163
  7.6.2 Changeback 163
  7.6.3 Transfer Prohibited 164
  7.6.4 Response to Transfer Prohibited: Forced Rerouting 166
  7.6.5 Transfer Restricted 166
  7.6.6 Transfer Allowed 167
  7.6.7 Response to Transfer Allowed: Controlled Rerouting 167
  7.6.8 Signaling Route Set Test 168
  7.6.9 Management Inhibiting 168
  7.6.10 Message Transfer Part (MTP) Restart 171
    7.6.10.1 Actions at a Node Adjacent to the Restarting Node 173
  7.6.11 Signaling Traffic Flow Control 174
    7.6.11.1 Signaling Link Congestion 174
  7.6.12 Signaling Route Set Congestion 177
7.7 Summary of Level 3 Timers 179
References 180

Chapter 8  ISDN: Services and Protocols  

8.1 Introduction 182
8.2 ISDN Services 182
8.3 ISDN Bearer Services 183
  8.3.1 Information Transfer Attributes 184
  8.3.2 Access Attributes and General Attributes 186
  8.3.3 Bearer Service Categories 187
8.3.3.1 64 kbps Unrestricted, 8 kHz Structured Bearer Service Category 188
8.3.3.2 64 kbps, 8 kHz Structured Bearer Service Category Usable for Speech Information Transfer 189
8.3.3.3 Circuit Mode 64 kbps, 8 kHz Structured Bearer Service Category Usable for 3.1 kHz Audio Information Transfer 189
8.3.3.4 Alternate Speech/64 kbps Unrestricted, 8 kHz Structured Bearer Service Category 189
8.3.3.5 2 × 64 kbps Unrestricted, 8 kHz Structured Bearer Service Category 190
8.3.3.6 Other Multirate Bearer Services 190
8.3.3.7 64 kbps, 8 kHz Structured Multiuse Bearer Service Category 190
8.3.3.8 Multirate Unrestricted 8 kHz Structured Bearer Service Category 190

8.4 ISDN Teleservices 191
8.5 ISDN Supplementary Services 192

8.5.1 Number Identification Supplementary Services 193
  8.5.1.1 Calling Line Identification Presentation (CLIP) 193
  8.5.1.2 Calling Line Identification Restriction (CLIR) 193
  8.5.1.3 Connected Line Identification Presentation (COLP) 194
  8.5.1.4 Connected Line Identification Restriction (COLR) 194
  8.5.1.5 Direct Inward Dialing Service 194
  8.5.1.6 Multiple Subscriber Number (MSN) Supplementary Service 195
  8.5.1.7 Malicious Call Identification (MCID) Supplementary Services 195
  8.5.1.8 Subaddressing Supplementary Services 195

8.5.2 Call Offering Supplementary Services 195
  8.5.2.1 Call Transfer (CT) 196
  8.5.2.2 Call Forwarding Services 197
  8.5.2.3 Call Deflection (CD) 198
  8.5.2.4 Line Hunting (LH) 199

8.5.3 Call Completion Supplementary Services 199
  8.5.3.1 Call Waiting (CW) 199
  8.5.3.2 Call Hold (HOLD) 200
  8.5.3.3 Completion of Calls to Busy Subscribers (CCBS) 201
  8.5.3.4 Terminal Portability 201

8.5.4 Multiparty Supplementary Services 201
  8.5.4.1 Conference Calling (CONF) 201
  8.5.4.2 Three-Party Supplementary Service 202

8.5.5 Community of Interest Supplementary Services 202
  8.5.5.1 Closed User Group (CUG) 203
  8.5.5.2 Private Numbering Plan (PNP) 203
  8.5.5.3 Multilevel Precedence and Preemption Service (MLPP) 203
  8.5.5.4 Priority Service 204
  8.5.5.5 Outgoing Call Barring 204
8.5.6 Charging Supplementary Services
  8.5.6.1 Credit Card Calling (CRED) 205
  8.5.6.2 Advice of Charge (AOC) 205
  8.5.6.3 Reverse Charging 205
8.5.7 Additional Information Transfer 206
  8.5.7.1 User-to-User Signaling 206

8.6 International and European Standards on Supplementary Services 206

8.7 Mutual Interaction between Supplementary Services 209

8.8 Link Access Procedure in D-Channel (LAPD) 209
  8.8.1 Services Provided by Layer 2 212
  8.8.2 Frame Format 213
  8.8.3 Functions Performed by Layer 2 214
    8.8.3.1 Delimitation Function: Opening and Closing Flags 214
    8.8.3.2 Error Detection 215
    8.8.3.3 Address Field: Multiplexing Logical Data Links 215
    8.8.3.4 The Control Field: Frame Types, Sequencing, Error Correction, and Flow Control 216
  8.8.4 Terminal Endpoint Identifier (TEI) Management 220
    8.8.4.1 TEI Assignment Procedure 220
    8.8.4.2 TEI Check Procedure 223
    8.8.4.3 TEI Removal Procedure 224
    8.8.4.4 TEI Identity Verify Procedure 225
  8.8.5 Multiple Frame Operation Procedure 225
    8.8.5.1 Establishing a Data Link Connection 225
    8.8.5.2 Multiple Frame Transfer between Data Link Entities 226
    8.8.5.3 Disconnection of Data Link 228
  8.8.6 Summary of Layer 2 Timers and Associated Parameters 228

8.9 Layer 3 Protocol in Digital Subscriber Signaling System 1 (DSS 1) 229
  8.9.1 Format of Layer 3 Messages 230
    8.9.1.1 Protocol Discriminator 231
    8.9.1.2 Call Reference 231
    8.9.1.3 Message Type 232
  8.9.2 Message Specific Part: Information Elements 236
  8.9.3 Basic Call Control Procedure 236
    8.9.3.1 Call Establishment at the Originating ISDN Interface 236
    8.9.3.2 Call Establishment at the Destination ISDN Access 245
    8.9.3.3 Call Clearing 247
  8.9.4 Control of ISDN Supplementary Services 248
    8.9.4.1 Control Procedure for the Call Hold Supplementary Service 250

8.10 Remarks 252
References 252
Chapter 9  
CCS 7 ISDN User Part  263

9.1 Introduction  264
9.2 ISUP Message Format  264
9.3 ISUP Signaling Procedures for Basic Call Control  267
  9.3.1 Basic Call Control for En Bloc Signaling  267
    9.3.1.1 Connection Setup  267
    9.3.1.2 Connection Release  279
  9.3.2 Basic Call Control for Overlap Signaling  282
9.4 Continuity Check (CC)  284
9.5 Supervision of Speech/Data Circuits by ISUP  287
  9.5.1 Circuit Group Query  287
  9.5.2 Blocking and Unblocking of Circuits or Circuit Groups  289
    9.5.2.1 Blocking of Circuits  290
    9.5.2.2 Unblocking of Circuits  291
  9.5.3 Blocking and Unblocking of Circuit Groups  292
  9.5.4 Reset of Circuits and Circuit Groups  293
9.6 Treatment of Abnormal Conditions  294
  9.6.1 Dual Seizures  294
  9.6.2 Errored, Unexpected, or Unrecognized Messages  295
    9.6.2.1 Actions for Errored Messages  296
    9.6.2.2 Actions for Unexpected Messages  296
    9.6.2.3 Actions for Unrecognized Messages  297
    9.6.2.4 Actions for Unrecognized Parameters  300
    9.6.2.5 Actions for Unrecognized Parameter Values  301
  9.6.3 Unequipped Circuit Identification Code  301
  9.6.4 ISDN User Part Unavailable  302
9.7 Congestion Control  303
  9.7.1 ISUP Signaling Congestion Control  304
  9.7.2 Automatic Congestion Control (ACC) (Calling Traffic Overload Control)  304
  9.7.3 Temporary Trunk Blocking  305
9.8 ISUP Call Setup for Supplementary Services  306
  9.8.1 ISUP Procedure for Calling Line Identification Presentation (CLIP)  306
  9.8.2 Malicious Call Identification (MCID) Supplementary Service  310
9.9 Remarks  312
References  312

Chapter 10  
CCS 7 Planning and Implementation  314

10.1 Introduction  315
10.2 Performance Objectives  315
  10.2.1 Hypothetical Signaling Reference Connection (HSRC)  316
  10.2.2 Signaling Delays  317
  10.2.3 Message Transfer Part (MTP) Performance  319
    10.2.3.1 Availability Objective  319
    10.2.3.2 Dependability Objective  320
    10.2.3.3 Message Transfer Time  321
  10.2.4 Performance Objectives for the ISUP  326
Chapter 14 Testing in the ISDN  437
14.1 Introduction  438
14.2 Layer 1 Tests  438
  14.2.1 Testing of Network Termination (NT)  441
    14.2.1.1 Test for Activation and Deactivation of Network Termination (NT)  441
    14.2.1.2 Test on Framing (Frame Structure in the Network Termination to Terminal Equipment Direction)  442
    14.2.1.3 Test on D-Channel Access  442
    14.2.1.4 Test on Electrical Characteristics  442
    14.2.1.5 Test on Timing  443
    14.2.1.6 Test on Power Feeding  443
    14.2.1.7 Other Tests  444
  14.2.2 Testing of Terminal Equipment  444
  14.2.3 Maintenance and Troubleshooting  445
14.3 Layer 2 and Layer 3 Tests  447
14.4 Maintenance of ISDN Access  452
References  454

Chapter 15 Timing in SONET and SDH  457
15.1 Introduction  457
15.2 SONET and SDH Frame Structures  459
  15.2.1 SONET Frame Structure  459
  15.2.2 SDH Frame Structure  464
15.3 Network Synchronization in SONET and SDH  466
  15.3.1 Pointer Adjustments  466
  15.3.2 Synchronization Network Reference Chain and Clock Quality in SDH  469
  15.3.3 Synchronization Reference Distribution in SONET  472
