Index

A, C, D, E
accuracy, 134, 175, 182–184, 205–208, 225
autocorrelation, 61–67, 72–74, 112
continuous system, 81, 109, 126, 128, 182–186, 198
control signal, 125
controlled system, 205, 208, 213, 217, 224
correlation, 59, 61–64, 66–75, 98
Dirac function, 10
discrete
  system, 99–103, 109, 126, 134, 185–188, 221, 235, 242
  systems, 99, 126, 134
disturbance input, 205
dynamical systems
  analysis, 239
definitions, 228–230
error signal, 125

F, I, L
Fourier series decomposition, 36
impulse signal, 17, 18
Laplace transformations, 46–53
linear systems modeling and analysis, 124

N, R, S
nonlinear system, 24, 126, 155
robustness analysis, 227
Shannon, 81
signal spectrum, 42
signals, 2–10
  representation and generation, 5–10
stability and robustness criteria, 227
state-space representation for system modeling and control, 165

T, W, Z
temporal
  frequency responses, 173
  systems error and time-frequency distributions, 59
time-invariant system, 27, 125, 130–134, 173, 229
transmission systems, 12–14
weighting, 75
Wiener-Khintchine theorem, 73, 74
Z-transform and parametric representation, 89–105
Rheology of Non-spherical Particle Suspensions
