INDEX

AC/DC converters, 223, 230

Acceleration:
- sensorless switched reluctance motors, 120
- sliding mode controller, 153
- switched reluctance motors, 106–107, 112–113

Accuracy enhancement algorithms, 101–107

AC/DC converters, 223, 230

Adaptive control algorithms:
- adaptive dynamic programming, 63–64
- characterized, 62
- neural adaptive control, 64–67

Adaptive control systems, 57

Adaptive Linear Combiner, least-mean-square (LMS), 22

Adaptive linear combiner, least-mean-square (LMS), 22

Adaptive LMS-FIR filter, power systems, 204

Adaptive-network-based fuzzy inference system (ANFIS), 89–90, 99–100, 120, 165

Adaptive neuro-fuzzy inference system (ANFIS), 388

Adaptive resonance theory (ART), tool wear monitoring, 179

Adaptive resonance theory 2 (ART2), 184

Adaptive time-delay neural networks (ATNN), 195

ADC (analog-to-digital converter) channel, 96

Additive uncertainty, 136, 146

Aircraft, high-performance, 57. See also Adaptive flight control

Algorithms, adaptation, 22

Amino acids, binding energy prediction, 344–345

Analog pre-processing, tool wear monitoring system, 175

Analytic continuation, 64

Analyze/StripMiner code, direct kernel ridge regression, 343

Angle estimation systems, switched reluctance motors:
- accuracy, 101–107
- characterized, 89–90, 94, 101

Annealing, simulated, 41–42

Anomaly detection, 241–242, 246, 265

Anomaly recognition, intrusion detection, 258

Ant colony optimization (ACO):
- clustering results, 373–374, 392–393
- components of, 371, 372–374
- experiment setup, 373–374

Anti-aliasing, 156, 159

Artificial current signal, 230–232

Artificial intelligence (AI), 2, 6, 319

SC-HC fusion, 12–13, 24, 58, 194
SC-HC//SC fusion, 50
SC-HC-SC fusion, 194
SC+HC fusion, 14–18, 24–25, 58, 392
SC+SC fusion, 393
SC+SC+HC fusion, 392
Scheduling, 32–33, 50. See also Process scheduling
Scientific data mining:
  applications of, generally, 314–315
  characterized, 320–321
  direct kernel methods:
    bias, 340–342
    case studies, 344–359
    fusion structures, 359–360
    machine learning dilemmas, 335–337
    regression models based on, 338–340
    ridge regression, 342–344
  types of, 317–318
Selection-crossover-mutation chain, 15
Self-organizing maps:
  direct kernel (DK-SOM), 348–351, 355, 357, 360
  intrusion detection, 242, 248–249, 254–256
  scientific data mining, 318, 327, 348
WWW usage mining:
  applications, generally, 371
  clusters, 378, 382–383, 385, 390
Sensorless SRM motor drives:
  acceleration from zero speed, 90, 112–113, 120
  accuracy enhancement algorithms:
    hard-computing-based on-line resistance estimation, 104–105
Sensorless SRM motor drives (Continued)
  polynomial predictive filtering, 105–107
  significance of, 101–102
  soft-computing-based optimal phase selection, 102–104
  characterized, 93–95
  defined, 89
  digital signal processor (DSP), 94, 120
fuzzy logic model:
  flux linkage characteristics, measurement of, 95–97
  training and validation, 97–101
  hardware configuration, 109–110
  high-speed test, 90, 114–118, 120
  low-current low-speed test, 90, 113–114, 120
  magnetization data, 93–94, 100
  software configuration, 110–111
  step change of load, test of, 90, 118–120

Time-delay neural network (TDNN), tool wear monitoring, 166, 185, 187–190, 192, 195

Time-delay radial basis function (TDRBF) networks, 195

Time-series analysis, data mining problems, 329

Time-series prediction, 22

Tool wear monitoring system, indirect on-line: analytical models:

- sensor-based methods, 177–178
- sensorless methods, 176–177

architecture, 172–176

characteristics of, 166, 170

estimation, generally, 165–166

experimental results, 189–192

functional levels of, 166

fusion of physical and neural network models, 181–184

fusion structures, 166, 192–195

importance of, 165, 169–170

influential factors, 171

neural network model:

- characterized, 171
- disadvantages of, 180–181
- examples of, 179–180
- fusion with physical models, 181–184
- techniques, 178–181, 187–189

physical model, 176–178

problem description, 172–176

process parameters, 172

solution:

- dynamic neural network at wear model level, 187–189
- outline of, 184–185
- physical force model at digital preprocessing level, 185–187

Total harmonic distortion (THD), 230–233

Transient load test, SRMs, 90, 118–120

Transposition, structural, 17–18

Truncation errors, 115

Ultrasound, tool wear monitoring, 178

Uncertainty bounds:

- estimation of:
  - components of, 129–130
  - nominal $H_{\infty}$ control of AMB test rig, 133–138
  - robust control of AMB, 130–132, 148–151

- fusion structures, 159–162
  - sliding mode control (SMC) systems, 151–159

Unity-coefficient basis FIR filter, 213, 221, 222, 228

Unmanned aerial vehicles (UAVs), 58, 62, 67

Unstructured uncertainties, 136

Vectors:

- emotion, 302
- HC-SC/SC-HC fusion, 13, 19
- intrusion detection systems, 262
- neural adaptive control, 65–66
- synthetic, 282–284
- weight, 332
- wisdom, 332
- Viterbi algorithm, 258

Water treatment plant, supervisory control, 46

Wear model, tool wear monitoring system, 176, 185

Weighting functions, uncertainty bounds, 136–139

Weights, multiobjective optimization, 44

Weight vector, 332

Welch method, 114

Well-being, EGC calculation, 292–294, 297

White noise:

- gain, 226, 229–230
- impact of, 181

Widrow-Hoff least mean-square (LMS) adaptation algorithm, 203

Winding resistance, switched reluctance motors:

- characterized, 94–96
- on-line estimation, 104–105, 108

Wisdom vector, 332

World Wide Web (WWW) usage mining:

- applications, generally, 363–364
- clustering, daily and hourly:
  - analysis of, 377–378
  - ant colony optimization (ACO), 372–374
  - fuzzy clustering algorithm, 374–376
  - self-organizing maps (SOMs), 376–377

- development of, 367
- fusion structures, 364, 389–393
- framework for, 368–372
- log format, 368
- log records, 363–364, 369
- usage analysis, daily and hourly:
  - experiment setup, training, and performance evaluation, 386–389
  - fuzzy inference systems (FIS), 382–387
linear genetic programming (LGP), 379–382, 389, 392
neural network learning, 389
significance of, 378–379

X-43A-LS autolander, 68–73
xPC Target, 134, 137
*Xplore*™ database, 6

Zadeh, Lotfi A., xvii, 5–6, 26
Zero-crossings detector, predictive filtering methods for power system:
characterized, 200
49-, 50-, and 51-Hz sinusoids corrupted by noise, sequence of, 217–223
single 60-Hz sinusoid corrupted by noise, 213–217, 222–223
