## Index

Active filter networks
- Bessel–Butterworth highpass, 64–67
- Bessel–Butterworth lowpass, 64–67, 100, 102, 171
- Butterworth bandreject, 82
- biquad bandpass, 60, 77
- gyrator, 60
- multiple feedback bandpass, 60, 77
- stagger-tuned bandpass, 79–81
- switched capacitor, 63
- unity gain, 60, 61–62, 64–67

Aliasing
- attenuation by filtering, 144–150, 176, 182, 215
- due to noise, 145–147, 176, 182, 215
- due to signal, 144–145
- error, 146–149, 176, 182, 215

Amplifiers
- differential, 31–35, 41
- differential output, 44
- error summary, 47–49, 99, 175
- frequency response, 38–39
- guarding, 93
- internal noise, 87–90
- instrumentation, 38–47, 93, 97–102, 171
- isolation, 45, 99–100, 171
- low input current, 42, 48
- low input voltage, 42, 48
- operational, 35–39, 50, 96
- parameter values, 42, 97, 180
- slew rate, 47
- subtractor, 40, 96, 107, 210
- types, 38
- wideband, 42, 46–48, 165

Analog signal conditioning
- complex harmonic, 98, 100
- dc and sinusoidal, 95–96
- error summary, 98–99
- input termination, 93, 210
- interference attenuation, 91–92, 94–95
- redundant, 102, 105

Analog signal processing
- averaging, 101–102
- logarithmic, 103–104
- precision ac-dc, 104–105
- sensor diagnostics, 105–106

Analog-to-digital converters
- applications, 23, 156, 165, 171, 200, 210
- binary codes, 118
- charge balancing, 133
- comparator oriented, 126
- device errors, 127
- flash, 134
Analog-to-digital converters (cont.)
  functions, 122
  integral nonlinearity, 126
  integrating dual-slope, 127–129
  interrupt interface, 135, 198
  long wordlength, 132
  LSB decimal equivalents, 125
  pipelined subranging, 135
  quantization, 123–125
  sigma-delta, 132, 134
  successive approximation, 130
  synchro-to-digital, 131
Aperture
  binary accuracy, 157
  error, 150, 155
  time, 113
Automation case studies
  Ashby map guided forging, 246–247
  chemical vapor deposition processing 219, 228
  chromate application empirical control, 230–232
  instrumented process roadmap, 207–208
  nanocomposites spectral control 247–250
  fuzzy logic tribology production, 237–239
  model reference scrubber regulation, 220–223
  neural network directed steel annealing, 259–263
  PID controller variability and tuning, 210–218
  rule based autoclave planner, 233–235
  superconductor process migration remodeling, 250–258
  ultralinear MBE machine calibration, 263–268
Axiomatic subprocess decoupling
  see In-situ control

Biomedical
  microwave microscopy, 23
  nanomaterials prosthesis, 247

Common mode
  rejection, 33, 40–44, 46, 48–49, 94, 97–98, 179
  voltage gain, 33, 40–41, 95, 175
Computational intelligence
  fuzzy logic, 228, 237, 239
  neural network, 224, 261–263
  rule based, 188, 233, 257–258
Conversion system examples
  aerospace I/O, 171
  compact disc player, 167
  dc voltmeter, 156
  digital controller, 210
  oversampled, 162
  pre-D/A interpolation, 163
  space probe, 200
  video data, 165
  virtual instrument, 23

Data acquisition
  see Analog signal conditioning
Digital-to-analog converters
  applications, 162, 165, 171, 198, 200, 210
  binary codes, 118
  device errors, 117, 177, 183, 215
  differential nonlinearity, 116
  LSB decimal equivalents, 125
  multiplying, 121
  peripheral interface, 122, 198
  R-2R network, 120
  voltage reference, 120
  weighted-resistor network, 120

Error basics
  algorithmic propagation, 185–186, 201–202
  apparatus summary, 48, 69–70, 73, 91, 99, 102,
    173, 210
  controlled variable, 210–212
  instrumentation interpretation, 2
Ex-situ planners
  autoclave rule base, 233–234
  ceramic densification, 240, 242
  chemical vapor deposition, 228–229
  roadmap, 208, 225
  process migration remodeling, 224–225
  steel annealing, 260
  superconductor processing, 254–258
  titanium forging, 248
  UAV avionics architecture, 191

Filter amplitude characteristics
  bandpass, 74, 79
bandreject, 75, 82
Bessel, 57–59
Butterworth, 55, 57
ideal, 54
Filter error analysis
  dc and sinusoidal signals, 68–70
  harmonic signals, 70–74
Filter phase characteristics
  Bessel, 57
  Butterworth, 55
  ideal, 54
Fuzzy logic
  see Computational intelligence
Grounding practice
  analog, 40, 43–45, 93, 96, 100, 171, 210
  chassis, 93, 171, 210
  digital, 93
  power, 93
  sensor, 93, 96, 100, 171
  shielded cables, 93, 96, 100
Hierarchical subprocess influences
  autoclave parameters, 189, 234
  axiomatic subprocesses, 227, 255
  ceramic matrix composites, 240, 242
  chemical deposition subprocesses, 228
  control subprocesses, 226, 251, 254, 265
  information uncertainty, 235
  titanium forging subprocesses, 248
  UAV avionics subprocesses, 191
In-situ control
  axiomatic subprocess decoupling, 226–227
  exfoliated nanocomposites, 251
  fuzzy compensation, 228, 239
  hierarchical subprocess influences, 226
  molecular beam epitaxy, 264–265
  product features remodeling, 224
  steel recrystallization annealing, 259–263
  superconductor deposition, 254
In-situ subprocesses
  computationally intelligent, 233–234, 237–239,
  258, 261–263
  decoupled, 249–251, 254–255
  hierarchical, 226–228, 234, 251, 254, 260
  implied, 248
  remodeling adaptive, 224, 249–250, 258
Instrumentation amplifiers
  see Amplifiers
Instrumentation analysis suite, 178–183
Interpolation
  applications, 159, 161, 165, 171, 177, 183, 210,
  216
  bandlimiting filters, 159–161, 171, 200, 212,
  216
  by pre-D/A converter, 163–164
  ideal, 142
  signal recovery comparison, 159–162
  signal spectral ensemble, 160
  step-interpolated equivalents, 154, 158–161
  transfer delay, 162
  video, 165
Intersample error
  graphical representation, 150, 152
  mathematical definition, 153–154
  system examples, 156, 166, 173, 177, 183, 210,
  216
JFET vs bipolar drift, 35
K, filter efficiency, 94
Logarithmic functions, 103–104
Multiplexer, analog
  applications, 113, 171, 198, 210
  connections, 111
  device errors, 111, 176, 182, 214
  transfer error, 112
  types, 110
Multisensor
  fusion, 186–192, 208
  hierarchy, 224, 226, 228, 251, 254, 265
Neural network
  see Computational intelligence
Noise
  amplifier sources, 87–89
  attenuation examples, 95–96, 98, 100
  error analysis, 91–92, 94–95
  quantization, 124–125
Operational amplifiers
  see Amplifiers
Oversampling, 162, 172–173

PID controller tuning
  quarter decay, 216–218
  trapezoidal, 216–218, 264

PN-junctions
  temperature dependence, 31, 35
  volt-ampere characteristic, 30

Process apparatus
  airflow measurement, 184–185
  autoclave composite cure, 234
  chemical vapor deposition, 219
  exfoliated nanocomposites, 249
  flue gas limestone scrubber, 220–222
  molecular beam epitaxy, 201, 263–264
  steel recrystallization annealing, 259–260
  steel strip chromate coating, 231–232
  superconductor deposition, 253–254
  three-zone furnace, 240–241
  titanium forging, 248
  tribological laser ablation, 238–239

Process data accountability
  apparatus controlled variables, 210, 219, 220–224, 256
  ex-situ planner identification, 191, 224, 255–256, 260
  in-situ parameter attribution, 224, 228, 230, 256, 264–265

Quantization
  decimal equivalents, 125
  error, 123–125
  noise, 124–125
  uncertainty, 123–124, 126

Reconstruction of sampled data
  see Interpolation

Rule based
  see Computational intelligence

Sample hold
  acquisition time, 114
  aperture time, 113, 135
  applications, 113, 130, 159, 171
  circuit, 112
  device error, 115, 175, 182
  timing relationships, 113–114

Sampled data
  aperture, 113, 150, 157
  folding frequency, 141, 145–147, 149
  frequency domain, 141, 145, 160
  ideal, 142
  interpolator comparison, 161
  interpolation functions, 143, 160, 163
  noise aliasing, 146–149, 176, 181, 215
  non return-to-zero, 141
  oversampling, 162
  recovery spectrum, 160
  return-to-zero, 141
  signal aliasing, 145
  sinc error, 143–144
  step-interpolated, 141, 151–152, 154, 159
  theory, 140–144
  time delay, 151–152
  time domain, 140–143, 150, 152, 159

Sensor basics
  calibration, 21, 265
  definitions, 2–3
  elements, 3
  error, 2, 98, 174
  linearization, 4

Sensors, analytical
