Index

Note: Illustrations (figures and tables) are comprehensively referred to from the text. Therefore, significant items in illustrations have only been given a page reference in the absence of their concomitant mention in the text referring to that illustration.

a
ablative therapies
prostate cancer 179–184
prostate enlargement
(benign) 165, 169
small renal tumours 10–18
follow-up 19
acidosis, metabolic
enterocystoplasty 115
reservoirs 143–145
neobladders 138
active surveillance (AS) of small renal tumours 18
alkalosis, metabolic, gastrocystoplasty 119
alpha-blockers and ejaculatory dysfunction 168
ammonia and intestinal reservoirs 143
AMS 700 series (penile implants) 201
AMS 800 series (artificial urinary sphincter) 204
anal sphincter pressure and rectal reservoirs 146
anastomotic cancer
bladder augmentation 118, 119
urinary diversions and reservoirs 147–149, 154
angiography, haemorrhage in partial nephrectomy 7
antegrade imaging
urethrography 189, 190, 192
urinary diversion 83
antegrade nephrostomy 83
antegrade ureteroscopy 43
antenatal hydronephrosis 57–58, 64
antibiotics
implant coatings 206
penile 204, 206
urinary tract infections 156
anticholinergic drugs and bladder augmentation in children 109, 113
aorta, infra-renal, soft tissue density 67
appendix
conduit 157
ureteric reconstruction 90
arteriovenous fistulae, post-renal transplant 27
artificial urinary sphincters 201, 204–206
infection 206, 208
autoaugmentation of bladder 110
autotransplantation, renal 90, 95

b
babies and infants,
antenatally-diagnosed hydronephrosis 57–58, 63
bacteriuria with conduits 84–85
balanitis xerotica obliterans 193–195
balloon dilation (of ureteric stenosis/stricture) 30
urinary conduit 83
balloon reservoirs, penile prostheses 202–205
bicarbonate (sodium) colonic reservoirs 143–145
gastrocystoplasty 119
neobladders 138
bladder 101–123
augmentation see cystoplasty complications in renal transplantation 30–31
flap (Boari) raised from 88–90, 94, 106
irradiated 106
neck stenosis/contracture after prostate surgery
bladder (contd.)
for benign disease 170
for cancer 178–179
orthotopic substitute see neobladder
outflow obstruction (BOO) 163, 191, 194
investigations/diagnostic evaluation 164
recurrent symptoms of 170
relief 164, 165, 167
overactive 166–167
perforation 101–103
after augmentation 117–118
reflux into ureter from see reflux
reimplantation of ureter into 88–90, 94–95
resection see cystectomy
voiding see voiding
see also entries under cysto-
bleeding see haemorrhage
blood tests, neobladder 130
Boari flap 88–90, 94, 106
bowel (intestine)
for bladder augmentation/reconstruction
children 109–110, 115, 118, 119
historical perspectives 109
neoplasia risk 118–119, 156
for reservoir construction 125, 141
with anastomosis to
membranous urethra see neobladder
girls 121
perforation 151–153
pregnancy testing and 121, 157
renal function 151
stones 149–150
storage consequences 143–144
for ureteric reconstruction 90, 91
see also anal sphincter
pressure; appendix;
colon; ileum; jejunal
conduits; large
intestinal neobladders;
rectum; small intestinal
submucosa
brachytherapy, prostate cancer 177, 181, 184
buccal mucosa in ureteric
replacement 91
bulbar strictures, idiopathic 193
C
calcium oxalate and calcium phosphate stones 52, 149
calculi see stones and calculi
calceal system, lower, ureteric
anastomosis to (ureterocalicostomy) 88
cancer (malignant tumours)
anastomotic see
anastomotic cancer
bladder 106
partial cystectomy with
ureteric re-implantation
103–104
bladder augmentation in
children 118–119, 156
neobladders and
follow-up schedule for
patients with cancer 130
oncologic follow-up
132–134
secondary tumour growth
in diversions for benign
disease 134–135
pelvic exenteration for see
pelvic exenteration
prostate see prostate cancer
recurrence see recurrence
renal 12, 18
in transplant 32–33
reservoirs and 118–119, 156–157
intestinal see neobladder
(subheading above)
carcinoma
in lower urinary tract
reconstruction 156
anastomotic 147, 148
neobladder 132
in renal transplant 32–33
Carter double-barrelled stoma
system 78
catheterisation, clean
intermittent 2, 109, 137, 150
see also pericatheter
urethrogram
children
bladder augmentation see
cystoplasty
pelvi-ureteric junction
obstruction (and its
reconstruction) 57, 59, 62–63
asymptomatic 61–63
ureteric reconstruction or
replacement 90, 93, 94
urinary diversion and
reservoirs 77, 78
bone growth problems
145
chloride disturbances see
hyperchloraemia; hypochloraemia
clam cystoplasty 109, 118, 119, 142, 144, 149
clean intermittent
catheterisation 2, 109, 137, 150
Clinical Research Office of the
Endourology Society (CROES) data 41, 44–45, 48
colic, ureteric 39, 41, 42, 52
colon
in bladder augmentation 109, 110, 115
neoplasia 116
as bladder substitutes (reservoirs incl. neobladders) 133, 137, 143–145, 147
anastomotic cancer 147
histological changes 153–154
perforation 152
secondary tumour growth 134
hyperchloraemic acidosis 143
for ureteric replacement 90
as urinary conduit 77–78
see also ureterosigmoidostomy
Coloplast Titan 201
colorectal pouch 157 see also rectosigmoid pouch
colour Doppler, renal transplant 23
complications, defining 1
computerised tomographic angiography (CTA), of haemorrhage in partial nephrectomy 6–7
computerised tomographic urography, urinary conduit 79
c conduits (urinary) 77–86
components for 142
consequences 141–148, 153
continence 157–158
conservative non-surgical (medical) management
pelvi-ureteric junction obstruction 57–58, 62
stones 37–41, 48
conservative surgery
bladder 101–108
small renal tumours 2–3
continence see also incontinence
continence (in lower urinary tract reconstruction or replacement) 157–158
bladder augmentation in children and 122
mechanisms 141, 158
urinary diversion and 157–158
conduits and 157–158
continent diversion 2, 138, 141, 145
corticosteroids, retropertitoneal fibrosis 68–69
cranberry extract 156
CROES data 41, 44–45, 48
cryoablation (CA) of small renal tumours 10–18
complications 13–14
failure 15–18
follow-up 19
cuffs, artificial urinary sphincter 204–206, 208
cystectomy
partial, reconstruction following 103–106
radical 125
complications 135, 136
cystine stones 52
cystoplasty 109–123
children 109–123
changes over time 120–121
clinical follow-up 111–113
postoperative imaging 113
procedures 109–111
seromuscular 109–110
clam 109, 118, 119, 142, 144, 149
see also gastrocystoplasty; ureterocystoplasty
cystoscopy
benign prostatic enlargement 167
injury in 101
daytime (diurnal) incontinence with neobladders 136, 138
debulking surgery of enlarged prostate 163–164, 167, 169, 171
defaecation disturbances with reservoirs 142
detrusor idiopathic instability 143
patch for bladder autoaugmentation 110
dimercaptosuccinic scan see DMSA scan
diurnal (daytime) incontinence with neobladders 136, 138
diverticula, bladder 167
DMSA (dimercaptosuccinic acid) scan
endo-urological stone treatment 38
transplant ureteric reflux 30
Doppler ultrasound, renal transplant 23
dysuria and haematuria 120
ejaculatory dysfunction after prostate surgery 168–169
electrolyte disorders, enterocystoplasty 115
enterocystoplasty, complications 115–119
erectile dysfunction
implants see penis
prostatectomy-related 169
examination (clinical) with neobladder 127–128
extracorporeal shock wave lithotripsy (ESWL) 37, 38, 41, 44–49, 52
extravasation 101
faeces/stools in urinary diversion 147
anastomotic cancer and 147, 148
see also defaecation
febrile sepsis in bladder augmentation 113
females (girls and women) 125
intestinal reservoirs, pregnancy testing 121, 157
radical cystectomy 125
fistulae (as complication) in prostate cancer therapy 181
in renal transplantation arteriovenous 27
urinary 30–31
flaps
Boari see Boari flap
ureteric injury and partial cystectomy 106
ureteric reimplantation 88–90, 94
flexible ureterorenoscopy (FURS) 37, 38, 44–53
fluorodeoxyglucose PET, prostate cancer 184
fluoroscopy prosthesis 205, 208
radiation exposure 53, 54
urethroplasty 191
gastrin over secretion 119–120
gastrocystoplasty 109
complications 119–120
neoplasia 156
gastrointestinal (gut) disturbances
colonic reservoirs 143
ileal reservoirs 142
G cells and hypergastrinaemia 119
genetic disorders associated with stone recurrence 52
girls and intestinal reservoirs 121
GreenLight™ laser for benign prostatic enlargement 169
gut disturbances see gastrointestinal disturbances
haematoma, partial nephrectomy 7, 8, 13
haematuria–dysuria syndrome 120
haemorrhage (bleeding) endo-urological stone treatment 48
partial nephrectomy 6
heat (thermo)-expandable metallic ureteric stents 208
high-intensity focused ultrasound (HIFU) in prostate cancer 180, 181, 183
histological changes in lower urinary tract replacements and reconstructions 153–154
historical perspectives 1–3
urinary diversion 2, 7, 77, 138
holmium enucleation of prostate 164
human chorionic gonadotrophin in pregnancy testing and intestinal reservoirs 121, 157
hydrocalycosis 63
hydrocoele 73
hydronephrosis, antenatal 57–58, 64
hyperchloraemia enterocystoplasty 115
reservoirs 143–145
neobladders 138
hypercontinence with neobladders 136–138
hypergastrinaemia 119–120
hypochloraemia, gastrocystoplasty 119
hypospadias 2, 193
ileum
in bladder augmentation 109, 115, 116
neoplasia 156
in bladder replacement (neobladder) 125
follow-up schedule 130
secondary tumour risk 134–135, 144
as conduit 77–86, 142, 143
clinical follow-up 78
historical aspects 2, 77
villous atrophy 80, 115, 153
as reservoir 141–143
with anastomosis to membranous urethra see neobladder (subheading above) perforation 152
in ureteric replacement 90, 96
implants and prostheses 201–210
incontinence
with artificial urinary sphincters 205–206
prostate surgery-related 170
with reservoirs 158
neobladders 136
see also continence
infants and babies, antenatally-diagnosed hydronephrosis 57–58, 63
infections (urinary tract; UTI) with conduits 84–85 prostheses and implants 206–207 penile 204, 206 with reservoirs 155–156 with stents and nephrostomies 93 inflatble penile implants 201–202 injury see trauma intestine see anal sphincter pressure; appendix; bowel; colon; ileum; jejunal conduits; large intestinal neobladders; neobladder; small intestinal submucosa irradiation see radiation ischaemia, partial nephrectomy 8–9

jejunal conduits 115

kidney (renal tissue) autotransplantation 90, 95–96 excision see nephrectomy reservoirs and 151 neobladders 128–132 symptomless obstruction, monitoring 83–84 transplantation 23–35 tumours small 5–21 in transplant 32–33 ureteric reconstruction or replacement and their functional impact on 93–97 see also flexible ureterorenoscopy; pyelonephritis; pyeloplasty; renal pelvis and entries under nephrectomy
Kock pouch, urethral 125

large intestinal neobladders 125–126 see also anal sphincter pressure; appendix; colon; rectum laser treatment for benign prostatic enlargement 164, 165, 169

lichen sclerosus 193–194 loopogram 78–83 lower urinary tract continence and see continence; incontinence reconstruction see reconstructive surgery replacement 141–161 components in 141 general consequences 141–161 symptoms (LUTS) 163, 167 persistence after prostate surgery 170, 171

magnesium ammonium phosphate stones 149 magnetic resonance urography (MRU) in pyeloplasty 60–61 Mainz II rectosigmoid pouch 145–147, 149, 155 malabsorption with lower urinary tract replacement or reconstruction 142–143
men (men) lower urinary tract symptoms see lower urinary tract penis see penis prostate see prostate cancer; prostate enlargement radical cystectomy 125 urethra see urethra malleable penile implants 201, 202 medical conditions (urological conditions associated with) retroperitoneal fibrosis 67 stone recurrence 52 medical therapy see conservative non-surgical management membranous urethra, intestinal reservoirs with anastomosis to see neobladder MemoKath stent 208 men see males mercapto acetyl triglycine renogram see MAG3 renogram metabolic disorders enterocystoplasty 115 gastrocystoplasty 119 reservoirs 143–145 neobladders 138 metallic ureteral stents 93, 208 micturition see voiding minimally invasive procedures prostate, compared with trans-urethral resection 164–165, 168, 169

magnetic resonance (MRU), in pyeloplasty 60–61
UroLift™ (urethral lift procedure) 165, 169
urolithiasis see stones and calculi
Urolume 208
urothelium in ureteric reconstruction of replacement 91
follow-up and complications 94–95
urothorax (puncture of thorax) in endo-urological stone treatment 40, 48
ureterocystoplasty 110–111, 121
V
vascular complications
partial nephrectomy 8
renal transplantation 23–27
vessicourethral reflex, loss 136
videocystometrography (VCMG) 164, 170
videourodynamic studies bladder augmentation 113, 121
prostatectomy 179
villus atrophy with ileal conduits 80, 115, 153
vitamin B12 deficiency 84, 85, 138, 142
voiding (micturition) neobladders, failure 136–138
prostate enlargement surgery and its effects on 164–167
voiding urethrogram, stricture 191
VQZ anastomosis 157
W
water imbalances, enterocystoplasty 115
women see females
Y
Yang–Monti tube/technique 90, 91, 97, 167
