1 Overview 1
   Engagement and readiness to change 2
   Formulations 3
   The Socratic process and inductive reasoning 4
   Involving parents in child-focused CBT 5
   The process of child-focused CBT 5
   Adapting CBT for children 6
   Core components of CBT programmes for internalising problems 7

2 Engagement and readiness to change 9
   Engaging with children 9
   The Stages of Change 10
   Motivational interviewing 15
   When would CBT not be indicated? 22
   ‘The Scales of Change’ 25

3 Formulations 27
   Key aspects of a formulation 28
   Mini-formulations 29
   General cognitive formulations 30
   Onset formulations 32
   Complex formulations 39
   Problem-specific formulations 41
   Common problems 44
   ‘The Negative Trap’ 47
   ‘The 4-part Negative Trap’ 48
   ‘Onset Formulation Template’ 49

4 The Socratic process and inductive reasoning 51
   Facilitating self-discovery 51
   The structure of the Socratic process 52
   Inductive reasoning 53
   The Socratic process 57
The Socratic process and collaborative empiricism 60
What makes a good Socratic question? 61
How does it work? 62
Common problems 64
‘The Chain of Events’ 67

5 Involving parents in child-focused CBT 69
The importance of involving parents 69
Clinical benefits of parental involvement 72
Model of change 73
The role of parents in child-focused CBT 73
Parental involvement 75
Common components of parent-focused interventions 80
Two final thoughts 83
‘What is Cognitive Behaviour Therapy (CBT)?’ 85
‘What Parents Need to Know about Cognitive Behaviour Therapy (CBT)’ 87

6 The process of child-focused CBT 91
The therapeutic process of child-focused CBT 91
PRECISE in practice 100

7 Adapting CBT for children 105
The cognitive capacity debate 105
Adapting CBT for use with children 107
Visualisation 112
‘The Thought Tracker Quiz: What are the thinking errors?’ 121
‘Responsibility Pies’ 122
‘When I Feel Worried’ 123
‘When I Feel Angry’ 124
‘When I Feel Sad’ 125
‘Sharing our Thoughts’ 126

8 Core components of CBT programmes for internalising problems 129
What is the balance between cognitive and behavioural strategies? 129
Do we need to directly focus upon dysfunctional cognitions and processes? 131
What cognitions or cognitive processes might be important? 131
Does cognitive change result in problem improvement? 132
Is CBT effective? 132
What are the effective components of CBT interventions? 133
Where is it best to start? 133
How many treatment sessions are needed? 134
What about home-based assignments?
What are the core components of standardised CBT programmes?

Psychoeducational materials

‘Beating Anxiety’
‘Fighting Back Depression’
‘Controlling Worries and Habits’
‘Coping with Trauma’
