Contents

1.	General and theoretical aspects of the metal enolates Luis R. Domingo and Juan Andrés	1
2.	Molecular structure of metal enolates Ksenija Babić-Samardžija, Sofija P. Sovilj and Vladislava M. Jovanović	81
3.	Luminescence phenomena involving metal enolates Hermi Felinto Brito, Oscar Manoel Loureiro Malta, Maria Claudia França Cunha Felinto and Ercules Epaminondas de Sousa Teotonio	131
4.	Thermochemical considerations of metal enolates Joel F. Liebman and Suzanne W. Slayden	185
5.	Synthesis of metal enolato complexes José Vicente	223
6.	Coordination chemistry of metal enolato complexes José Vicente	313
7.	Metal enolates as synthons in organic chemistry Daniel Stolz and Uli Kzmaier	355
8.	Acid–base properties of enols and enolates Jason Eames	411
9.	Redox chemistry and electrochemistry of metal enolates Guido Pampaloni and Piero Zanello	461
10.	Catalysis using β -diketonato metal complexes Stephen A. Westcott	551
11.	Biological aspects of metal enolates Li-June Ming	579
12.	Analytical aspects of metal enolates Eli Harlev, Shmuel Bittner and Jacob Zabicky	683
13.	The chemistry of metal ynolates Mitsuru Shindo	739

14.	Lanthanide enolates as nuclear magnetic resonance shift reagents Thomas J. Wenzel and Katelyn A. Provencher	787
15.	Metal enolates in polymer science and technology Philippe Lecomte and Robert Jérôme	823
16.	Structure and properties of d^8 metal–dithiolene complexes Paola Deplano, M. Laura Mercuri, Angela Serpe and Luca Pilia	879
17.	Deposition of metals and metal oxides by means of metal enolates Heinrich Lang and Roy Buschbeck	929
	Author index	1019
	Subject index	1153
